EXL NEO

NEODYMIUM MAGNET

DS18 amassed a wealth of experience in manufacturing the most elegant neodymium midranges for those seeking simple perfection. Neodymium magnets provide a higher magnetic flux density in the air gap which generates a much greater action force in the voice coil, for this reason neo magnets have the strongest permanent magnets of all the commercially available speakers. Ranging in sizes, mounting depths, and frequency responses, we have more than 10 different models of neo mids to accommodate any build.

TROUBLEMAKER

The name says it all. After causing trouble in the competition lanes and exceeding global expectations we gained the knowledge necessary to tweak these subs and achieve the best results. After years of research and development we designed a new technology in SPL competition subwoofer motors and restructured the whole line. With authentic red Kevlar cones, voice coils made in the USA, and a secret compound formula for the glues and resins, we combined the highest quality materials into our classified design. The result; a monster subwoofer that can handle up to 30K Watts in burps and exceeds all specifications desired by competitors around the world.

GEN-X

The DS18 GEN-X line was developed with the customer in mind. We wanted to produce the sturdiest amplifier possible within a reasonable price range, and after months of R&D we finally put together the most attractive design with top of the line internal technologies. All internal parts are manufactured by DS18. With their lower power consumption and high efficiency, the gen-x amplifiers can be installed Without the need of a secondary or high-output alternator.

DS18 is continuously evolving while creating products that stand out against our competitors. We now offer a specially designed alternator for SPL competitions. The DS18 alternators generate higher voltages and amperages in this market and our units are designed for competitors wishing to improve their maximum SPL. DS18 modules have the ability to turn on and off the DS18 alternator with just switch of a button; you can turn on when needed and turn it off when it is not needed. These Alternators use plug and play connectors between the regulator, module and the alternator without using tools; all you have to do is connect the 0 Gauge power wires or higher and begin to use it.

At DS18 we see our direct customers as part of our family. And we like to treat our family very well. Throughout the year we have marketing budgets allocated to print, radio, tradeshow, and point of sale merchandise that help increase our brand awareness and your sales. Feel free to contact your DS18 representative for some awesome SWAG merchandise to put up in your stores, warehouses, and to give away to your customers. We are constantly adding and upgrading our SWAG - just like our products
