

Orange Team Spring Recap

Check out what we've been up to this Spring!

- **State of the Science Project:** A team of ecologists and climatologists are collaborating to conduct a review of the most current regionally specific climate information and pair that with current research and knowledge of local species and habitats of the south coast that are at risk due to climate variability and other stressors.
- **CSA Climate Symposium in 2018:** This symposium will unveil the State of the Science Project findings and provide networking opportunities with local researchers and managers in the region. Local students interested in pursuing a career in science will be invited and given the chance to learn from and network with some of our region's best scientists.
- **Tribal Climate Summit:** The Climate Science Alliance-South Coast is partnering with Southern California Tribes to host a Tribal Climate Summit that encourages new connections and collaboration between tribal leaders and local researchers in the region on climate change resiliency.
