Initial Coin Offerings (ICO) – is the means of attracting non-financial capital with the help of a crowdfunding project (presupposing the usage of discount tokens). The abbreviation «ICO» will be used in the text below.

**WAVES** – a blockchain platform for issuing cryptographic tokens and for crowdfunding campaigning.

**CrazyCoin**, a product token which gives you the right to receive a promotion code for Crazy Shapes: Run Adventure services according to the terms of this document. Token is issued at WAVES blockchain platforms.
Introduction

Mobile games market is developing very rapidly and every day there appear more and more innovative and extraordinary solutions which allow not only to entertain the audience but to show the way of dealing with different services, for example, blockchain.

Crazy Shapes: Run Adventure is one of the games via which it is possible to see how developing cryptocurrencies have penetrated all the possible areas including mobile games.

The number of users is constantly growing which allows wider audience to receive the information about the way of using cryptocurrencies. The number of blockchain users is growing and this, in its turn, provides good development and opens new perspectives of this area.

During a short period of this game being available to the public, it has been downloaded and played by more than 25,000 people. The game demonstrates good results in terms of advertisement. Its promotion on the local market as well as on the markets of certain foreign countries is the evidence that Crazy Shapes: Run Adventure has good chances for success. Most of opponents create games which are aimed just at helping their developers to make a profit. However, our aim is wider, we want to bring pleasure to each gamer that is why we focus on every detail. We put our heart into the project and customers notice it.

Gamers are influenced by the change of trends to a great extent that is why popularity is often a key factor for the project development, so this became our starting point, the reason why we decided to implement ICO.
Introduction

Our aim is to demonstrate to everyone that not only major companies are able to create really good content in the modern world but a small team can shake up the market too.

Our mission is to bring pleasure to every gamer.

After finishing ICO and the complete implementation of CrazyCoin a fully functioning application ecosystem will be created.

Each user will be able to see not only a wonderful world of Crazy Shapes: Run Adventure, but also get familiar with cryptocurrency and even start using it (see more details in “Tokens implementation” section).
Market

Over the past 3 years the official amount of mobile games has grown from 85.7 to 108.9 billion dollars. The average annual growth is 12%. At this scale it is a very quick tempo of growth. The number of downloads and purchases is constantly growing so the new audience is appearing.

F2P games exist due to two main factors: in-game purchases and advertisements. There exist other variants too.

Since 2016, the fraction of income of IOS developers has been on the average 5 000 US dollars per month.

Most popular systems are Android and iOS. According to Gartner research, by the third quarter of 2016, 87.8% of all the sold smartphones are the devices with the Android operational system. The development of iOS apps constitutes 11.5%.

The statistics of the monthly profit from different apps also indicates the consistency of this market. According to Forbes, the average app for iOS allows to earn 4.000 US dollars a month while the app for Android brings 1,125 US dollars and for Windows phone – 625 US dollars. In 2016 the situation changed radically. According to Statista, the app for Windows Phone started bringing 11.400 US dollars a month, for iOS – 8.100 US dollars and for Android – 4.900 US dollars.

Although most people prefer Android, they constitute 75% and the reason for this is that the largest number of most used devices in the world is based on Android.

Changing of the devices themselves, namely, increasing of RAM, graphics power, processors and improving of the mobile internet leads to the fact that smartphones are now functioning as full-fledged gaming devices. It is stated in App Annie report that mobile games which were installed by less than 50% of users in 2011 started bringing 85% of the profit of the whole app market in 2015. This is 34.8 billion of US dollars in absolute figures.
