

Versa Inserto Cushions

The Promedicare Verso Inserto range is the nexus that bridges the gap from the standard off the shelf positioning product and the high end hand made custom product.

Starting from a flat base, a modular system of independent pre-shaped inserts is assembled to produce the required symmetric or asymmetric anatomic form and so provide total personalized support for each client.

Many options are available to support, contain and align the trunk and pelvis thanks to a modular system consisting of lining, padding and independent pre-shaped inserts which when assembled follow the anatomical body shape.

Any changes in posture or body form can be fully addressed by moving and relocating the pre-shaped inserts. All individual system components have dampening and anti-vibration proprieties.

This modular system empowers the Seating Therapist to solve complex issues n the spot and allows for changes in sitting patterns over time, changes in condition or weight gain/loss.

The anatomical structure of Men and Women is different.

The Inserto Modular Positioning Range is designed to adapt to these differing body shapes with a fully personalised fit.

The pelvis must be fully supported: Anterior (in front of the ischia) Lateral (under the greater trochanters) Posterior (gluteal mass, coccyx, sacrum) The support must be different for men and women. The posture of the trunk also needs to be supported to stop the spine collapsing and to keep postural alignment. The support must be different for men and women.

Pelvis of the Man

Pelvis of the Woman

THE ONLY POSTURAL SOLUTION

Adapted to the pelvis of the

MAN **WOMAN** **ADULT** **CHILD**

PTS ~ Pelvic Total Support

Trunk posture starts from the pelvis

The Promedicare Versa Inserto range works by perfectly fitting and balancing the relationship between the legs, pelvis and spine (coccyx, sacral and lumbar) containing the anatomy and compensating for deformities.

The containment gained by PTS also prevents slipping at the ischium and guarantees lateral and posterior stability.

Many options are available to support, contain and align the trunk and pelvis thanks to a modular system consisting of lining, padding and independent pre-shaped inserts which when assembled follow the anatomical body shape.

Any changes in posture or body form can be fully addressed by moving and relocating the pre-shaped inserts. All individual system components have dampening and anti-vibration proprieties. lateral and posterior stability.

THICKNESSES AND DENSITY

of foam are calculated and relative to the size of the cushion and expected user weight.

COMBINATIONS

of best suited materials in the areas subjected to greater pressure loads.

ACCURATELY

cut to ensure a complete fit with the cushion size and application. Effective performance in all conditions what ever the assembly criteria of the insert kit.

MODULAR PADS

ensure the system adheres perfectly to the body form and its movements and distributes loads in relation to postural control.

BASICO

Light Positioning
Wider Support
High Comfort

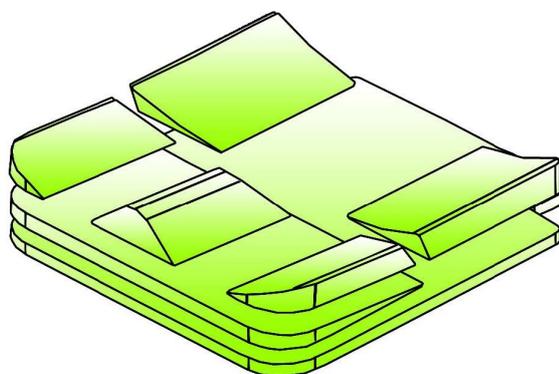

Any clients who need postural support as well as positioning changes over time will enjoy the Basico. Can be used to accommodate leg length discrepancies, wind sweeping, pelvic obliquity, pelvic rotation and mild anterior or posterior pelvic tilt.

Basico is already pre-assembled and ready to go but can also be adapted if required. Modular inserts provide Mild to Moderate postural control.

Low profile cushion makes transfers easy.
 Wider support to accommodate differing body shapes.
 Layered Visco Elastic (memory foam) ensure high comfort and good skin protection.

Technical Features & Specifications

User weight limit 135kg, 6 modular inserts as standard, Posterior padding comprised of three layers of foam, Anterior padding composed of two layers of foam, Incontinent Air Exchange Cover supplied as standard.

PRATICO

Enhanced Propelling
Lightweight
Low Profile

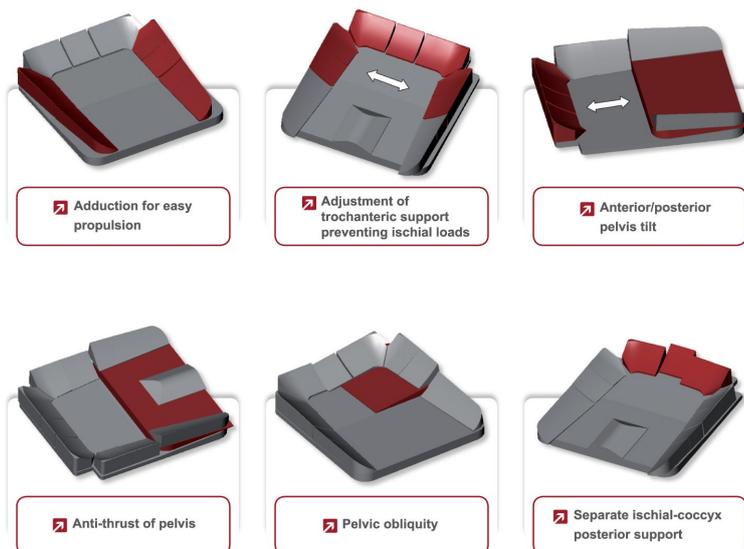

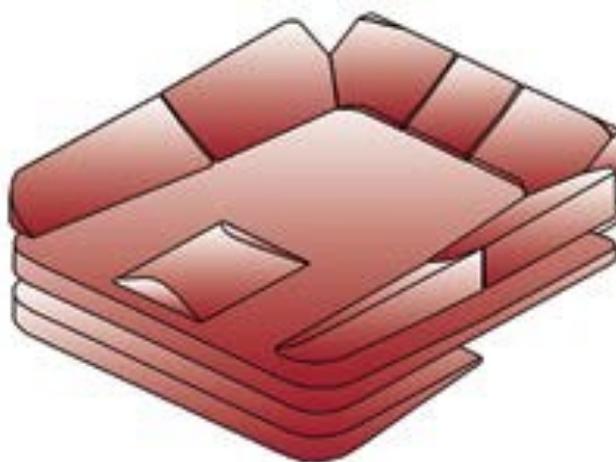

Designed for clients who need mild postural support.

Ideal for those who lead an active life and need a cushion easy to transfer from that is lightweight to transport.

Also suitable for mild leg length discrepancies, wind sweeping, pelvic obliquities, pelvic rotation and posterior/anterior pelvic tilt.

Provides lateral leg control to assist in stabilising the pelvis.

Technical Features & Specifications

User weight limit 135kg, 9 modular and configurable inserts as standard, Posterior padding comprised of two layers of foam, Posterior protective pad—anti-decubitus memory foam, Anterior padding composed of two layers of foam, Incontinent Air Exchange Cover supplied as standard.

MEDIANO

Anatomically Shaped Wider Support Ischial—Trochanteric-Coccygeal Suspension

Designed for clients who need moderate to high positioning support.

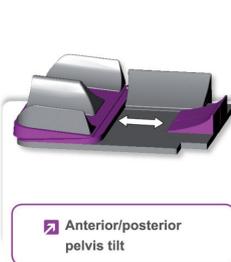

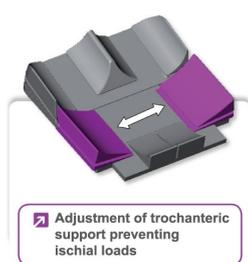

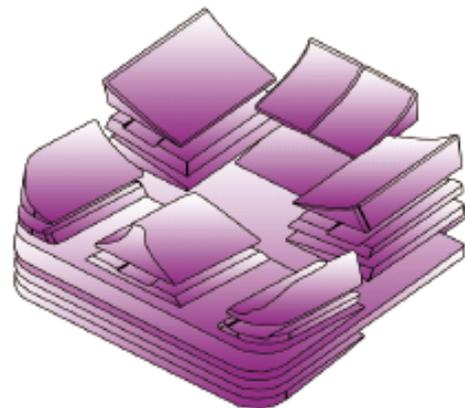

Ideal for high pressure risk clients who require good support and a lateral, anterior/posterior containment of the pelvis.

Also suitable for leg length discrepancies, wind sweeping, pelvic obliquities, pelvic rotation and light posterior/anterior pelvic tilt.

Anatomically shaped to support and channel the lower body. Moderate to High level of customisable positioning support. Layered Visco Elastic (memory foam) ensures high comfort and good skin protection. Ischial-Trochanteric—Coccygeal Suspension created individually for each user by the adjustment of the modular inserts.

DOMINO

Anatomically Shaped

Perfect Fit

**Ischial—Trochanteric-Coccygeal
Suspension**

Designed for clients who need higher positioning support or those with leg length discrepancies and fixed or flexible deformities.

Suitable for high pressure risk clients especially those with no lateral/posterior/medial pelvis control. Modular design gives this cushion the ability to change with clients needs.

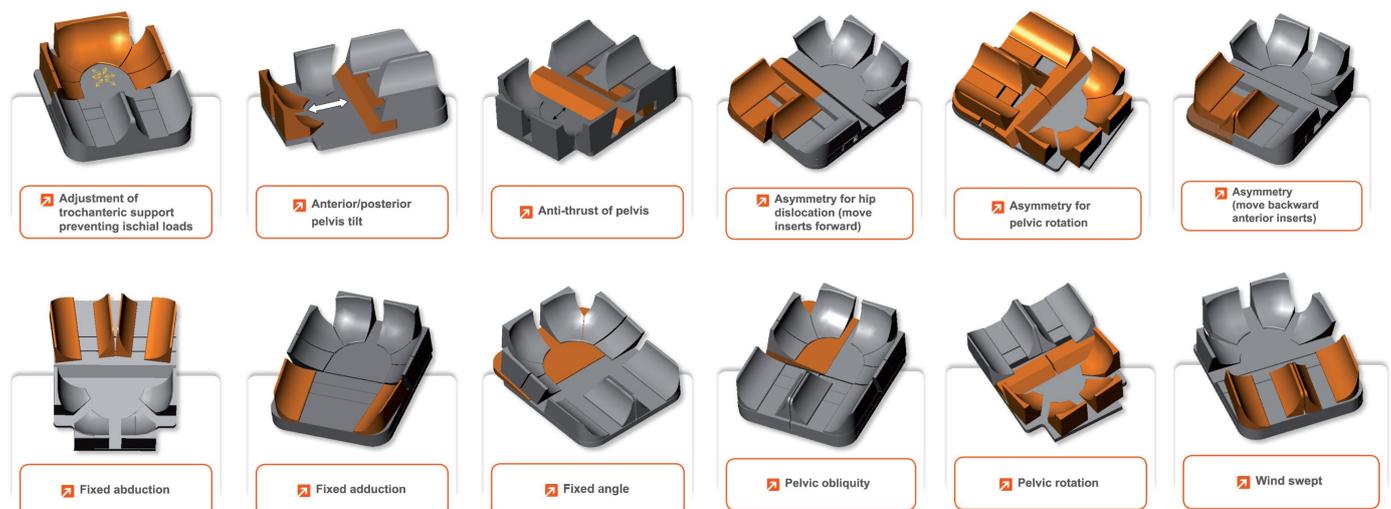

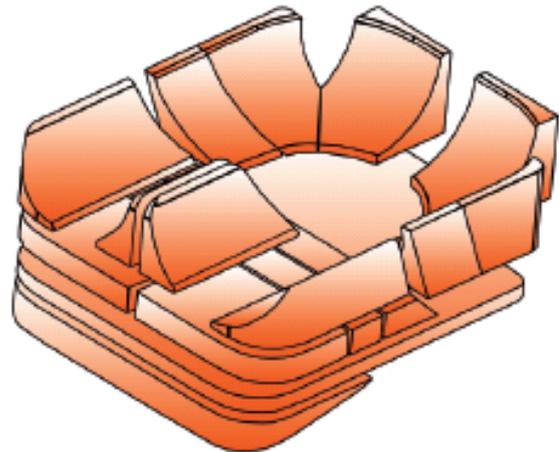

Perfect fit created individually by use of modular inserts.

Deep medial and pelvic guides create pelvic containment to stabilise the pelvis and suspend the

Ischial—Trochanteric—Coccygeal—Sacral regions.

High level of customisable positioning support. Layered Visco Elastic Foam ensures high comfort and good skin protection.

IMPULSO

Enable better foot propelling
Adjustable
Comfortable

Ideal for hemiplegics or amputees at low risk of skin breakdown.

Cushion enables optimal foot propulsion whilst stabilizing the plegic limb, or the positioning of limb/s or stump/s.

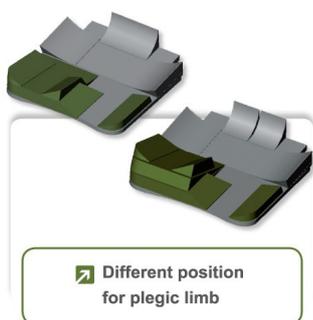

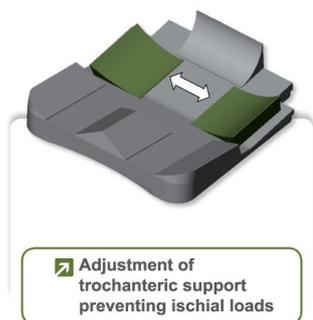

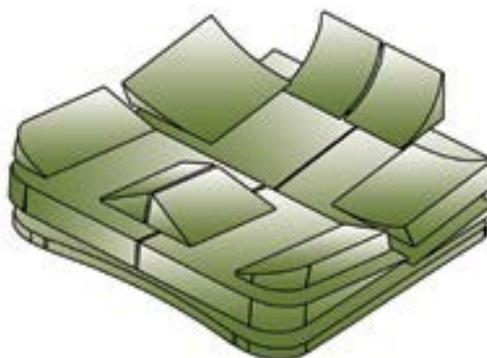

Suitable for those who have mild leg length discrepancies, wind sweeping, pelvic obliquity, pelvic rotations, posterior and anterior pelvic tilt.

Ideal for those who need a mild postural support .

If you who lead an active life and need a low profile cushion that is easy to transfer from and to transport.

Provides lateral leg control to assist in stabilising the pelvis.

TANTO

Optimal Propulsion
Stability
Safe

For those who need a medium/high postural support.

For those with an active lifestyle that need a cushion that is easy to handle and transfer from.

Can be used to accommodate mild leg length discrepancies, wind sweeping, pelvic obliquity, pelvic rotation and mild anterior or posterior pelvic tilt.

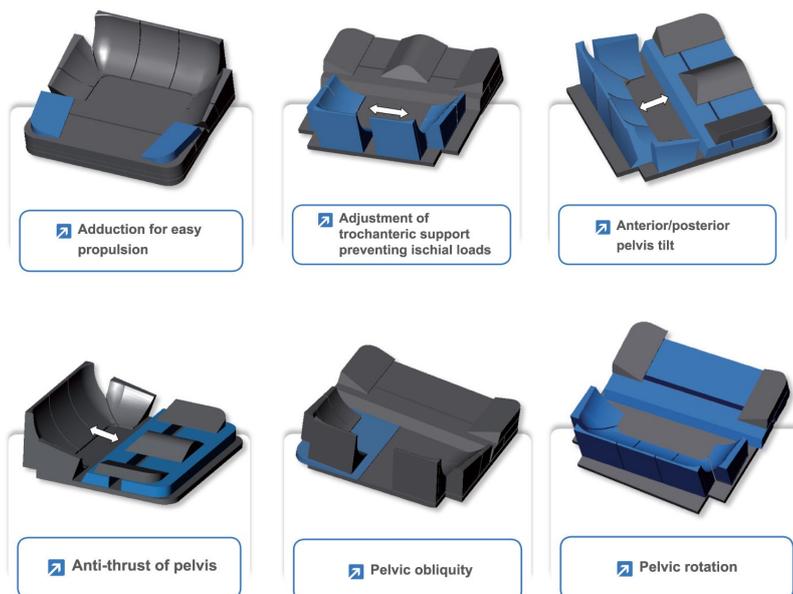

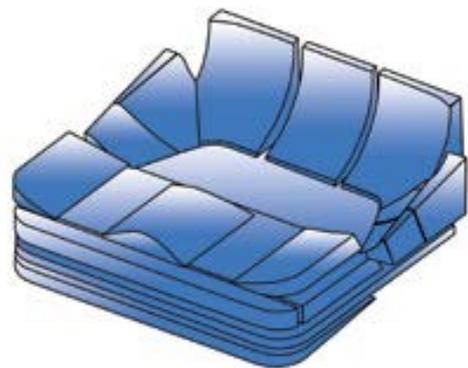

Tanto is ideal for those who need lateral control of the legs and coccyx/sacral protection to improve self trunk control and enhance propulsion.

Modular inserts provide Mild to Moderate postural control.

Low profile cushion makes transfers easy.

Layered Visco Elastic (memory foam) ensure high comfort and good skin protection.

PUCCO

Facilitates Trunk Control *Lightweight* *Multifunctional*

A paediatric seating system that is completely modular and adjustable to suit many seating applications such as leg length discrepancy, wind sweeping, pelvic obliquity, pelvic rotation, anterior pelvis tilts and a risk of hip dislocation.

Ideal for children with poor postural control and in particular those who are hypotonic.

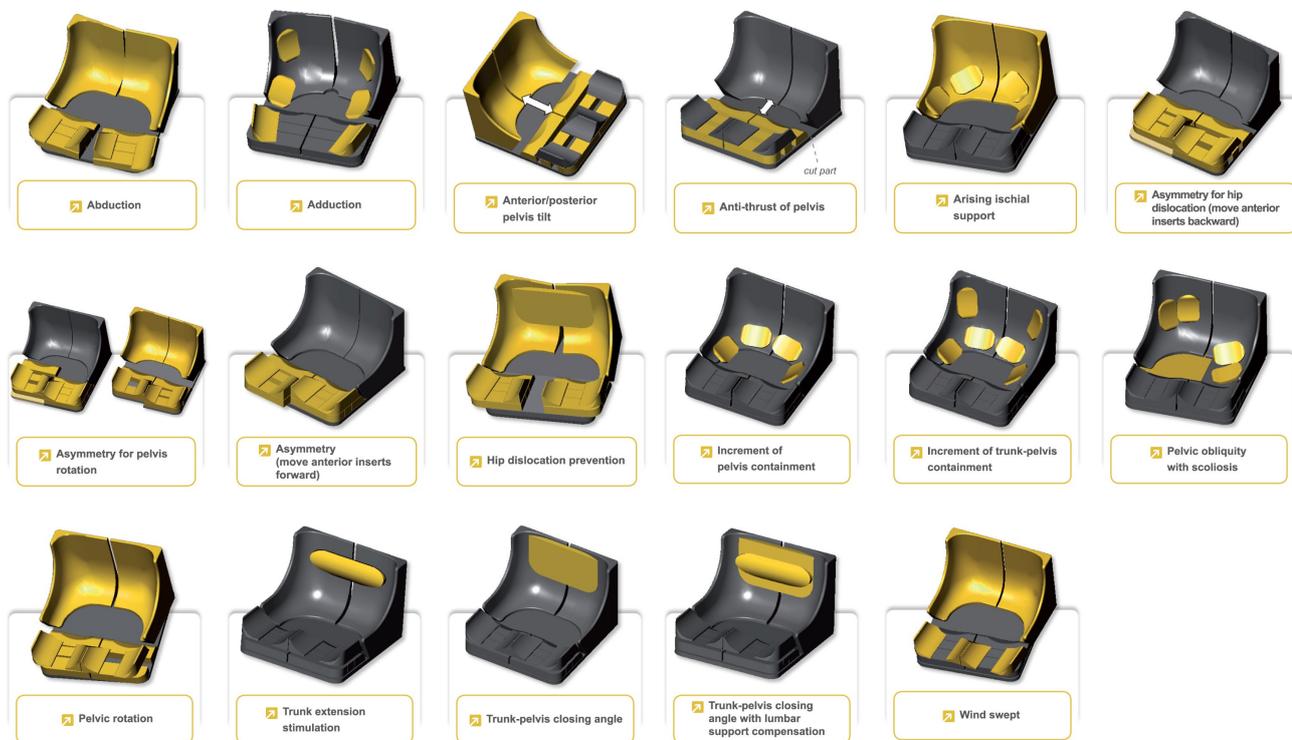

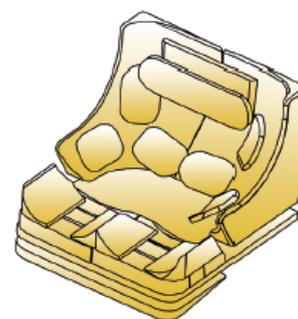

Pucco facilitates trunk control with 21 modular configurable inserts allowing the cushion to be customised to meet each individual clients needs.

Pucco is lightweight keeping transport manageable for caregivers.

Pucco is multifunctional and can be used in a buggy, a wheelchair or any other seating surface around the home.

NAUCO

Supportive
Lightweight
Multifunctional

For small children with poor postural control who would benefit greatly from a seated position.

Can be used to accommodate leg length discrepancies, wind sweeping, pelvic obliquity, pelvic rotation and anterior or posterior pelvic tilt or for those at risk of hip dislocations.

For those who need a high/very high level of postural support. An innovative paediatric postural concept for the legs and pelvis. Completely adjustable and modular to suit multiple applications, whilst being lightweight and easy to handle.

Easy to adapt to many therapeutic situations and social lifestyles by encouraging full integration into daily family life.
