

# Broadband Feasibility & Planning Services

Planning. Funding Alignment. Execution Readiness.

## Overview

AIM Concepts provides broadband feasibility and planning services designed to move projects from concept to execution. Our work is grounded in real deployment experience and aligned with federal and state funding requirements. We do not produce theoretical studies — we produce plans that can be funded, procured, and built.

## The Challenge

Broadband projects often fail at the planning stage due to misalignment with funding requirements, unrealistic cost assumptions, or lack of a clear execution strategy. This leads to delays, rejected applications, and stalled deployments.

## Our Approach

We align feasibility planning directly with real-world deployment conditions. Every engagement validates technical design, confirms financial viability, and ensures compliance with funding and regulatory frameworks.

## Scope of Work

**Existing Conditions:** Infrastructure review and service gaps.

**Technical:** Network architecture and engineering validation.

**Financial:** Cost modeling and funding alignment.

**Regulatory:** BEAD, TBCP, and permitting.

**Deployment:** Phasing and procurement strategy.

## Deliverables

Feasibility Reports, Network Designs, Cost Models, Funding Alignment, and Deployment Roadmaps.

## Why AIM Concepts

We combine planning expertise with real deployment experience, ensuring feasibility translates into execution.
