### New Gait Harness System

Second Step Inc, Eugene, Ore, introduces the new Gait Harness System® II (GHSII)—the Unique Over-ground Trunk Support System, which provides patients with safe weight-bearing recovery results, while walking over ground. Its frame configuration, trunk, and new double-wide forearm supports work together to stabilize the pelvis when weight shifting, so patients can begin taking their own steps. New multidirectional casters provide effortless mobility, and the system also moves in an inline direction, which steadies patients who move side to side.
