Gait Harness System

Second Step Inc, Eugene, Ore, offers the Inline Gait Harness System®—a functional training system that allows individuals to perform standing or walking activities in a safe and effective environment. Uniquely different from the Original Gait Harness System® (GHS), the IGHS has dedicated rear casters for patients who need the GHS to move in a locked-in, straightforward direction. The IGHS is intended for individuals who are challenged because of side-to-side movements while they are trying to walk straightforward. The IGHS allows caregivers to assist their patients with land-based walking activities.
