

**Final resolution of the International Seminar of IUPA IUVNEI
under the subject: «Participation of international veteran
organizations in increase of public admissibility of plans of
development of the Armenian NPP and
prolongation of resource of unit № 2»
11-14 April 2018. Erevan, Republic of Armenia**

Having heard and discussed reports represented on the seminar by the experts of veteran organizations from Russia, Armenia, Belorussia, Bulgaria, Lithuania, Slovakia, Czech Republic, Ukraine, participants of the seminar pointed out:

Sustainable development of the mankind at the present stage is impossible without outstripping development of nuclear energy and innovative nuclear technologies.

Ecological security of future generations depends directly on the progress in development of nuclear energy which is sole from existing energy technologies can provide decrease of hazardous emissions into the atmosphere of the Earth.

The seminar attracted attention of wide ranges of public of Armenia as well as of business entities which consider development of nuclear energy as one of the most real alternatives of energy supply of Republic.

Outstripping development of nuclear technologies is possible only in case of full compliance of nuclear security and, consequently, public admissibility.

Recognizing necessity of execution of further focused efforts of IUVNEI, participants of the seminar deem appropriate:

- To promote creation and improvement of advanced systems of nuclear and radiation security minimizing influence of human factor.

- To promote creation of nuclear reactors of new generation capable in future to provide safe development of nuclear energy.
- To expand work of International veteran organizations under public admissibility of nuclear energy focusing its attention on the work with rising generation.
- To recommend leaders and divisions under the work with public of nuclear enterprises not to oppose alternative sources of energy to nuclear ones. Its development and implementation will complete potential of nuclear-energy installations and will serve the basis of synergetic effect in complex development of energy systems of states.
- To recommend the ministry of energy of Armenia for the purpose of increase of nuclear security and responsibility of executors to formalize functions of exploiting organization.
- To pay attention of the world expert community of nuclear experts to disadvantages in the course of realization of strategy of decommissioning of Ignalina NPP units creating potential ecological risks in the region.
- To Secretariat of IUVNEI to create an expert group of veterans of nuclear energy and industry competent in indicated issues, to conduct analysis of existing materials under the situation on Ignalina NPP and to apply for conduction of official international missions under the aegis of IAEA for elaboration of constructive proposals.
