Abstract

DUDGX plans to solve problems that come with the purchasing of protective padding in extreme sports and particularly in the Stunt Industry by enabling part customizations and full customizations of pads that will be created using 3D printing technology and advanced materials to suit the needs of the performer/sport enthusiast and offer them the maximum protection and comfort while going about their extreme days. We want to make purchases of these products easier, faster, and more secure by using DUDGX as our preferred method of payment. DUDGX is a peer to peer network with partial POW and major POS

Introduction

DUDGX will be used to change protective pads industry with 3D printing and innovative designing.

We will be the first protective pads platform where you will be able to fully customize your high quality protective pads made up from variety and high-quality materials up to standards of and for Extreme Sports Athletes, Action Movie Stars and Stunt Industry Professionals Internationally, Created and Designed by Professional Stunt Performers.

We have been in industry +-10 years and we have worked and established strong connections internationally. Being in Stunt Industry for so long and having to use padding in order to protect our bodies and ensure that we can take a hit, get up and do it multiple times requires some high-quality padding and even than injuries can happen. Our skills, training and safety requirements are what keeps us being safe and knowing what to do in case when something goes wrong and pads are there to protect us.

There are great pads companies out there but most of them only produce standard sizes and no pads are custom made to fit you 100%. We had spent so much time and money on finding the right fit and on ensuring that our bodies have higher chance of not getting injured. We come across good pads via word of mouth but even then you can not be sure if it's good enough for your specific requirements.

Our Products will have standard sizes of pads available with few customisation options and we will have fully customised pads created for our customers as well.

We will be using 3D scanning technology only for full customised pads enquires which will be made to the exact shape of our client's body.

Sometimes the costumes in movies are very specific and it's not as easy to hide padding within the clothing and sometimes you end up using pads that don't fit you properly or you use low profile pads that don't offer full impact protection.

Protective pads sometimes may look a bit odd or too bulky and cumbersome and you can't fit them under your costume or sometimes you are wearing costume in which you can't even wear protective padding and that's why we want to create realistic looking skin sleeves that will look and imitate skin.

We will be working on this idea with our team of designers to ensure that we create good quality sleeves that you can put over your pads. To get the right skin tone all you have to do is upload a picture of your skin, making sure that you compare your skin and the picture you took, and we will design it to match with your skin tone. This is something that we want to create in future and have it as one of our products after our official product launch.

With our innovative designs and ideas, we will create only the best pads for you designed by Professional Stunt Performers.

Our sales platform will have many customisation options and will be available internationally.

DUDGX will be our favoured payment method and all of our customers paying with DUDG will receive 5% off our products at all times.

We will have option of pre-orders as well as an exclusive look in creation and testing of our products.

Our brand Ambassadors will be our fellow stunt performers and extreme sports enthusiasts.

PoW

DUDGX's PoW (prof of work) lasting until block 10080.

Pow of work is known as mining, it happens by using GPU (graphics processing unit) in order to complete difficult math problems and reward it's miners 40 DUDG per block.

The problem is based on hashing algorithm and once it has been solved the block is created and miner receives reward. There are two ways of mining, solo mining and pool mining. Usually miners connect to the pool where every miner contributes in mining of a block and everyone shares rewards. Solo mining is more difficult unless you have a big mining rig with strong hashing power. Pow was the main method which started with Bitcoin.

As new algorithm blockchains got created blockchains advanced and started using new methods of securing the network. Sometimes combining Proof of Work with proof of stake and Master Nodes.

There has been many debates on witch method is better and it has been proven that PoW can have the problem of 51% attack therefore some blockchains have introduced the method of Proof of Stake to secure their blockchains.

DUDG PoW

Our idea was to give an opportunity to miners to secure our blockchain and earn 2 DUDG per block for their work until we move to Masternodes and PoS method at 10080 block.

PoS (Proof of Stake)

PoS – Proof of Stake is a method used to confirm blocks on the blockchain and it rewards coin holders based on amount held in your wallet.

It doesn't use GPU and more electricity therefore PoS is faster, cheaper and more efficient way of mining blocks and securing the blockchain. The cryptographic calculations in PoS are much easier for computers to solve.

Additional protection of blockchain comes with the way PoS is discouraging dishonesty and an attacker is penalised with a penalty. All you have to do is hold your coins in your wallet and earn rewards that we have specified in coin information.

The more coins you have the bigger reward you will receive and earn coins from transactions happening on the network. Make sure that your wallet is unlocked so you can use PoS System.

Masternodes (MN)

Masternodes are used to complete unique tasks in ways other nodes can't. Mainly, the Masternodes can secure and anonymize the transactions. Masternodes provide the opportunity to invest in Cryptocurrencies with the added benefit of earning guaranteed extra coins. Masternodes are run on a VPS (Virtual Private Server) which is a cloud based server that you pay for on a monthly basis.

To own DUDGX Masternode you will have to lock in 50000 DUDGX coins in order to receive 65% on rewards from block 10080.

COIN INFORMATION

Pre-mine

60 million DUDGX to be used for swap, exchange funding and project development.

Blocks	POW	DUDGX per block
10 – 10080		2 DUDGX
	POS	
10080 – 100000		40 DUDGX
100000 – 200000		30 DUDGX
200000 – 300000		20 DUDGX
300000 – 400000		10 DUDGX
400000 – 500000		8 DUDGX
500000 – 600000		7 DUDGX
600000 – 700000		6 DUDGX
700000 – 800000		5 DUDGX
800000 – 900000		4 DUDGX
900000 - 1000000		3 DUDGX
1000000 -2000000		2 DUDGX
2000000 - infinite		1 DUDGX

Port :44771

RPC Port : 44772

Block size : 1 Min

Block Time : 1 Minute

Stake Maturity : 45 Blocks.

POW Reward : 2 DUDGX per block.

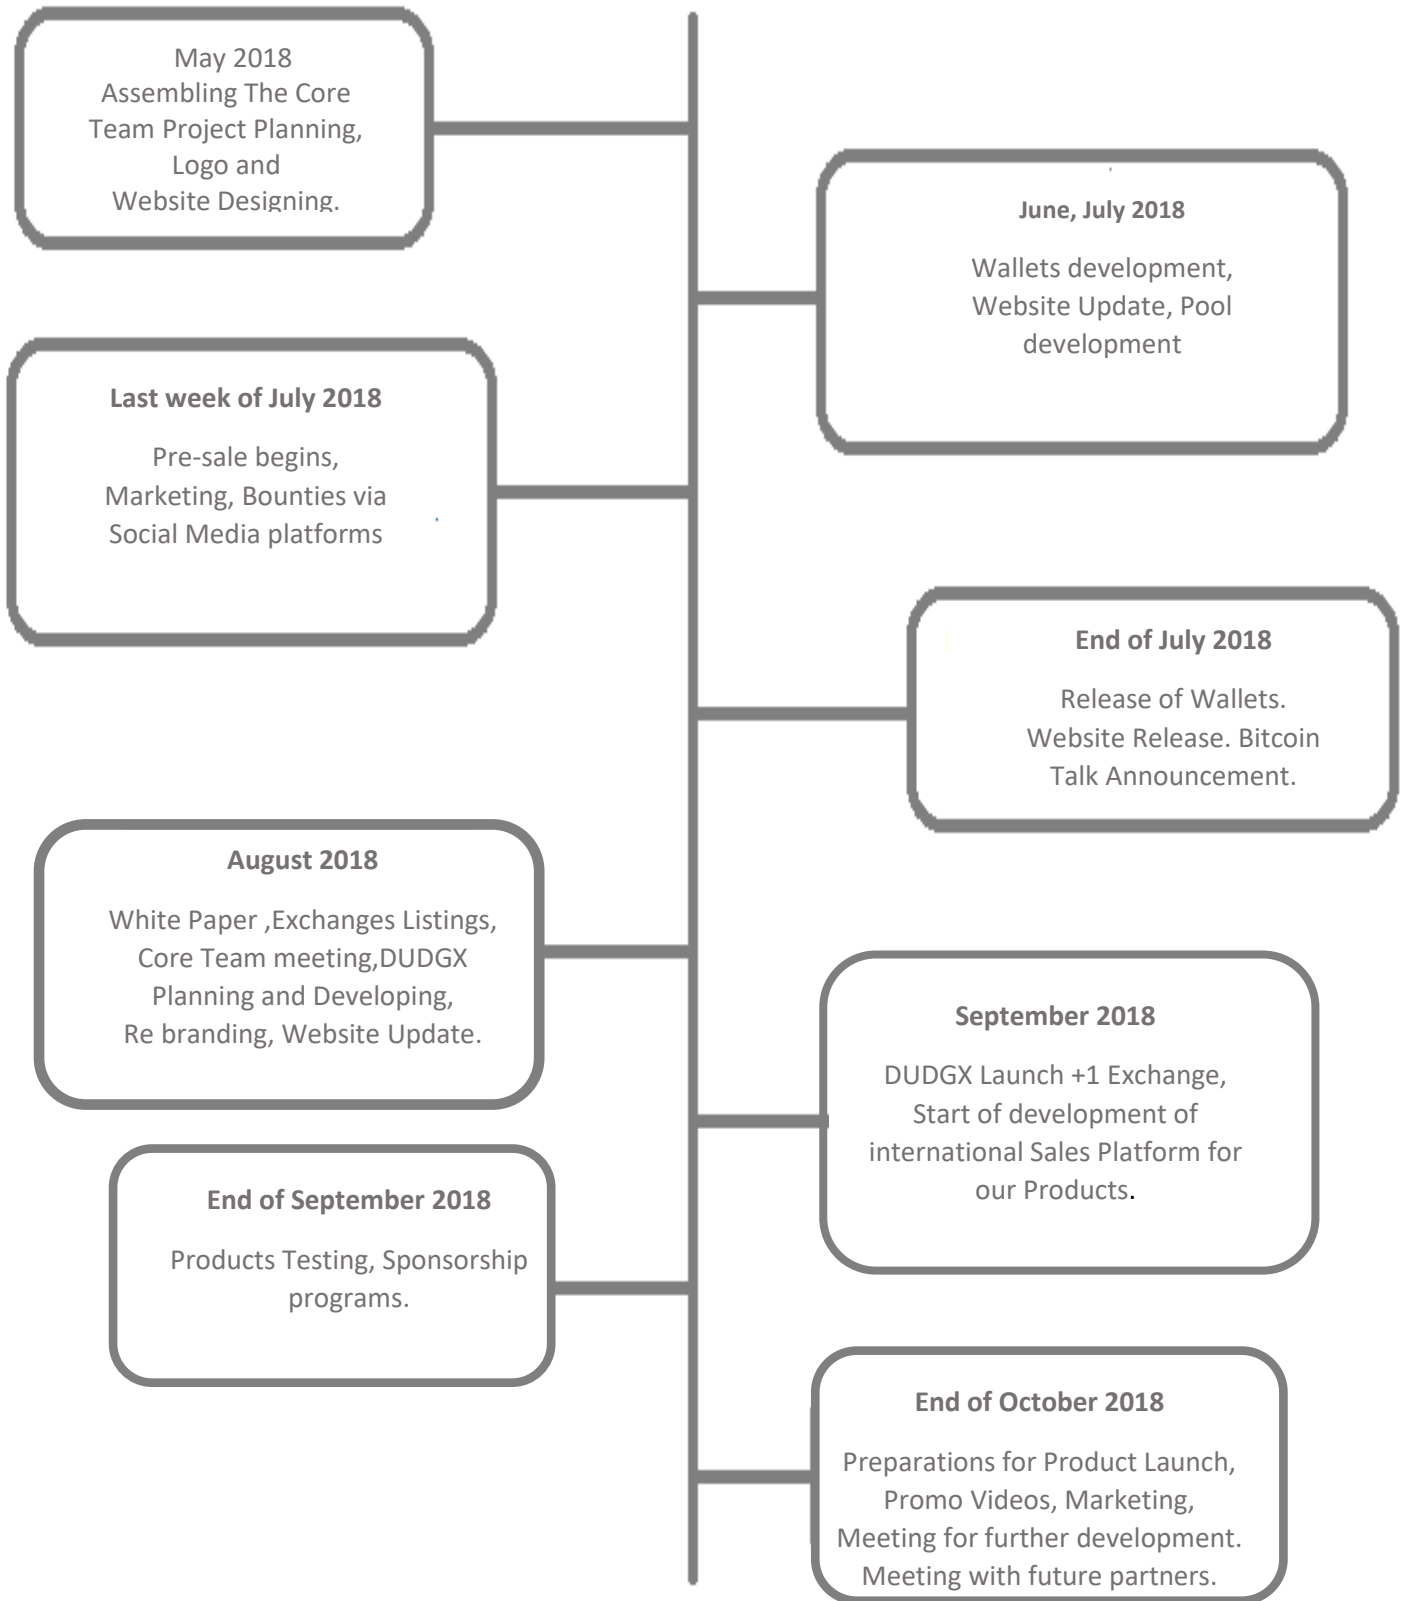

Masternode Reward 65% Pos Block

Required DUDGX for a Masternode 50000

Algo Scrypt

Max Supply 500 000 000
