

KINGCOIN

Whitepaper

Draft Version: April 10 2018

Our vision

The task of our team is to spread the cryptocurrency all over the world, the possibility of its use in all everyday purchases and payment for services. Our expanded range of payment solutions will give a powerful impetus to the convenience of using the digital currency; thereby we will contribute to development of the cryptocurrency blockchain market. In addition, our team pays a lot of attention to the system's security.

We believe that digital means are actively distributed, therefore Kingcoin as a company issues the digital cryptocurrency based on the blockchain technology, which will be used in our Internet hotel booking system all over the world.

What is Kingcoin

It is a secure Internet booking system for hotels, motels and housing for rest all over the world, which is based on the blockchain technology using Kingcoin (KGN) cryptocurrency as payment.

Hotels, motels and housing for holiday

More than 1.5 million accommodation options: hotels, motels, housing for rent and not just that Search by city, point of interest or hotel name – in just one step Filters by price, review rating, Wi-Fi speed and by other features important for you You can book at the last moment or in advance

Find great deals

Daily offers for every budget
Free booking cancellation for most options
No booking fees
Real guest reviews

Manage your booking on the go

Receive confirmation without printouts
Make changes to booking wherever and whenever you like
24-hour customer service
Send messages to the site owner, view the time of arrival and leave feedback

At the same time, the system uses instant secure payment by cryptocurrency and works based on the blockchain technology.

At the moment, we are at the alpha stage of platform testing. Our team consists of high-level specialists who are working on creation of the system. For further development, we need our own blockchain, as well as a fast and secure transfer system.

Kingcoin (KGN) - Digital currency inside the platform.

Use KGN for instant and private payments on Kingcoin system and in the real world using secure open source software that works based on a payment platform that is supported by thousands of users all over the world.

Instant

Your time has a value. InstantSend confirms payments in less than a second.

Private

Protect your financial information. PrivateSend provides the privacy of your financial transactions and balances on your accounts.

Safe

Safety, which you can rely on. Transactions are confirmed by a high computing capacity of the mining equipment and a network of servers hosting all over the world.

Next Generation Network P2P

The basis of the Kingcoin technology is a unique two-level network architecture P2P with a built-in reward system. Miners are rewarded for ensuring blockchain security, and network nodes (Nodes) are rewarded for checking, storing and providing blockchain to users.

Nodes form a new network layer from servers that work together in clusters called quorums. As a result, this ensures operation of new types of such decentralized services, as instant transactions, privacy and decentralized management. At the same time, these systems are protected from threats of appropriate network attacks.

Development of the crypto industry at a rapid pace has shown that a number of existing payment solutions do not meet the demand, and in some cases, it slows the market of cryptocurrencies, not allowing to expand its geography of use.

The Kingcoin platform is an evolutionary step in the field of payment by synonymous advantages of blocking technologies. Our platform will allow buyers to find and book hotels, to buy air tickets, as well as to rent cars and to immediately pay using a cryptocurrency, which will allow them not to waste their valuable time and assets, and be confident in protection of their rights.

At the same time, we provide sellers with the possibility of safe, convenient receipt of funds in various currencies (cryptocurrency, fiat currency) and new clients in the rapidly developing crypto industry. The Kingcoin team strives to create one of the best platforms that will meet all today's and tomorrow's criteria, as well as attract a huge number of new users, thereby expanding the geography of cryptocurrency use.

The functionality of the platform is not limited to this, but it has already provided creation of a unique product (based on simple mechanisms) that has no analogues in the world of crypto payments, which will benefit all crypto community and the world in whole. Using advantages of KGN cryptocurrency, we want to offer the whole world to become our supporters and join the new era of the crypto industry.

Kingcoin is an ambitious project that aims to create a universal software platform for the crypto industry from scratch, which brings tangible economic returns both to its supporters, in the form of an increase in the value of coins, and to the community of buyers and sellers, which causes further growth of the platform in the form of an increase in the number of users. We are confident that cryptocurrencies have already become something much more than just a speculation subject; they will occupy the minds and wallets of consumers. It is a determining factor, which, as we see, will change the way of using cryptocurrency by buyers and sellers.

EXAMPLE: you need to buy an air ticket, you search for an air ticket, select a date and class, KINGCOIN SEARCH will give you all possible variations of tickets and instantly reflect the cost in the cryptocurrency you prefer. After you have confirmed your choice, you fill out the form and confirm payment. Payment will be made from your personal wallet inside the KINGCOIN platform.
