

Scape Technologies A/S **is Looking for an IT Student Helper**

Job Description

The primary task is to help manage and improve the IT infrastructure at Scape Technologies A/S which includes areas such as:

- Installation of Windows Computers including Hardware installation
- Surveillance and maintenance of Servers
- Maintaining the PBX Telephone system
- Other IT relevant tasks

The amount of work will total 5-10 hours per week. In the daily work, you will report to Jesper Drøhse who is responsible for IT.

We would like the position to be occupied as soon as possible.

Qualifications

- Following an IT-relevant Education
- Solid knowledge about Windows 7, 8.1 and 10
- Some knowledge about Windows Servers, incl. AD, DFS, WDS
- Some knowledge about Team Foundation Server and SharePoint
- Some knowledge about VMware ESXi

Experience

- Preferably 1-2 years of experience handling support cases or similar
- If you have interest in industrial robots, it's an advantage

Skills

- Good communication skills
- Positive attitude and ready to handle challenges
- Must be able to work independently as well as in teams and handle many tasks at the same time

About Scape Technologies A/S

Scape Technologies A/S specializes in “bin-picking” systems for the automation industry. The term “bin-picking” is about guiding an industrial robot to pick randomly placed parts in a bin and place them into the production lines, machines, fixtures etc. This has in many years been called the Holy Grail of Automation because it is the last big area of production which nobody has been able to automate until Scape Technologies entered the world of bin-picking.

Scape Technologies A/S provides the following for a bin-picking system:

- Software for recognizing the parts using 3D sensors
- 2D and 3D vision sensors
- Grippers optimized for bin-picking – mounted at the end of the robot arm
- Software for controlling the robot movements

Scape Technologies A/S was founded in 2006 and is world leading in its field. Several SCAPE systems are running in production at some of the biggest car manufactures in the world.

Scape Technologies is located in Odense, Denmark.
