

## PennSMART® INTEGO

Intelligent Solutions to common safety and security challenges for municipalities

discreet surveillance

under the trees

crime deterrent

pedestrian safety

**PennSMART® INTEGO** system is the next generation of SMART security standards for cities, towns, university campuses and other public spaces. This unique system of pedestrian scaled, discreet camera surveillance is combined with an energy saving LED lighting platform. The IP66 rated, patented system is the best overall option for community safety.

### HOW DOES IT WORK?

Our smart surveillance approach to public safety is installed under the trees—where it matters most. Camera surveillance systems alone, typically mounted on the tops of buildings, cannot deliver facial recognition to support law enforcement. PennSMART® INTEGO delivers street view surveillance and provides the best safety lighting available.

### WHAT ARE THE BENEFITS OF INSTALLING INTEGO?

- 360° view mapping & recording
- Wireless network communications
- Motion detection
- Data storage
- Energy saving LED lighting platforms reduce utility rates
- Cutoff design is dark-sky & environmentally friendly
- Quality Facial Recognition
- Monitor real time suspicious activity

### CAN I RETROFIT EXISTING STREET LIGHTS WITH INTEGO?

Absolutely! The INTEGO LED surveillance system can be specified for new construction or as a retrofit application. Fully assembled Factory retrofit kits are configured to your specifications and manufactured for easy field installation.
