

Master position

The Laboratory for Immunological and Molecular Cancer Research (LIMCR, www.limcr.at) is searching for a highly motivated and skilful Master student.

The student will investigate modulators of the cytoskeleton during mitosis of leukemic cells. Experimental techniques of the project comprise immunofluorescence microscopy, flow cytometry and molecular and biochemical methods.

With this Cancer Cluster Salzburg associated project, we offer an exciting mechanistical research topic embedded in a clinical environment and in close cooperation to the PLUS. We are a young and ambitious team and provide an excellent working atmosphere.

Applicants should have experience in cell culture and a strong background in tumour biology or immunology. Beginning is flexible.
