Meet 3 year old Luke Michael - "The Little but Mighty"

On March 25th 2017, 2 year old Luke Michael slipped away from a care giver and was found unresponsive in a Koi pond. Life saving intervention was started immediately, and 15 minutes later his heart began to beat. The lack of oxygen to Luke's brain left with him a permanent and severe Anoxic Brain Injury. He was unable to swallow, sit, walk, talk, smile, or do any other activities that a normal 2 year old should be able to do. He spent 25 days in the PICU at the University of Virginia, then was transferred to inpatient rehab at the Kennedy Krieger Institute.

Since coming home, Luke's father has resigned from work to remain home and provide care to Luke and get him to his much needed and frequent therapies. Luke has undergone numerous "alternative" therapies, including Stem Cell Transplant, Hyperbaric Oxygen Therapy, and Anat Baniel Therapy. Although Luke has made marked and measurable improvement as a result of these alternative therapies, they are not covered by health insurance and have been paid for completely by Luke's parents. Luke continues to make improvements daily, however his parents know that continued Hyperbaric, Stem Cell, and ABM therapies are vital to his overall recovery.

Luke is the youngest of 4 children, all of which, including Luke attend Trevilians Elementary School. Luke and his family regularly attend church service at New Life Community Church, and are deep rooted in their community here in Louisa County.

Please come out and help this family in need or make donations to:
 Evan Adams Children Benefit t PO Box 2203, Louisa, Va. 23093.
