NousLogic Telehealth announces the Launch of:

Smart Home Health Platform

FOR IMMEDIATE RELEASE

Irvine, California – NousLogic Telehealth is excited to announce the launch of our Smart Home Health Platform, an integrated IoT platform that empowers elderlies to live safely and independently in their own homes.

Our proprietary sensors and cloud-connected Smart Devices allow insights and intelligence on the **4W (Who does What, When & Where)** by tagging, tracking and monitoring which enable family members and caregivers interactions, early medical interventions as well as preventive measures to keep elderlies healthy at home.

For example, our **Smart Pill Bottle/7-day Pillbox** (used in reimbursable Medicare RPM) monitors and reminds people to take their medications according to prescribed instructions as well as notifies caregivers of these events. Our **Emergency Smart Card** (with HIPAA compliant access by Facial recognition) allows instant access to a patient's medical record as well as telemedicine via video-call. Our **Smart SOS Button**, independently or in collaboration with **Algorithmic Intuition's fall/stumbling detection technology**, can dial 911, alert family members and simultaneously auto-unlock the door for first responders. Furthermore, our **Smart Door Lock / Garage Opener** platform can detect and notify the presence/absence or coming/going of the resident (particularly useful for elderlies with dementia). Our products also work with Google Assistant, Echo Alexa and Apple Siri voice assistants to improve the activities of daily living of the physically challenged patients.

Smart Home-Health Platform with TeleHealth Applications

NousLogic Telehealth is an end-to-end hardware/software IoT Internet-of-Things company providing services in tracking, tagging, monitoring, and control for Smart Home Health / RPM Remote Patient Monitoring market. Our goal is to create a home health platform to enable the elderlies and baby boomers to continue to live independently and safely in their home.
