

TAMPER, CABLE CUT, SKIMMER OVERLAY & READER REPLACEMENT DETECTION

Since inception in 1995, Parabit has been dedicated to the research and development of fundamental ATM Security products:

SkimGard® technology was designed to detect most, if not all overlay skimming devices that have been discovered and investigated by FI's and authorities. Parabit developed *SkimGard*® technology to provide a deterrent and viable detection system to the global skimming epidemic.

Parabit's patented *SkimGard*® technology detects Reader tampering, cable cut and the installation of an overlay skimming device onto a Parabit reader with *SkimGard*® technology. *SkimGard*® integrates with all alarm panels, video recorders or ATM out-of-service inputs.

System Detection

Skimmer Overlay

SkimGard® technology is engineered to constantly monitor a defined area in front of the reader surface. The reader faceplate contains raised sections which provide for a mechanically difficult area to install a skimming device. When an object is placed over the card slot (for a pre programmed time interval), an input will be activated on an existing alarm system.

Tamper Detection

SkimGard® technology provides Tamper Detection on an existing alarm system immediately upon the removal a Reader with *SkimGard*® from its installed location.

Cable Cut

SkimGard® technology constantly monitors continuity of the card reader cable between the ACS Controller and Readers with *SkimGard*® technology. Once any of the Reader cables are cut, an input will be activated on an existing alarm system.

Site Prep for 1/4" Spacer

*This product is covered by U.S. Patent Nos. 8,523,072 and 8,757,488

COMING SUMMER 2018

***SkimGard*® Protection:**

- Tamper, Cable Cut & Reader Replacement Detection
- Overlay Skimmer Detection - IMSR/MMR/MMR-BT
- NFC Skimmer Detection - MMR/MMR-BT/MMRC/MMRC-BT
- Flush Mount Weather Resistant Construction:
 - High Impact Polycarbonate - MMR/MMR-BT/MMRC/MMRC-BT
 - Cast Aluminum/Stainless Steel - IMSR
