What is the EDPM?

The purpose of the European Pain Federation EFIC Examination for the Diploma in Pain Medicine (EDPM) is to improve the standard of pain assessment and treatment through the provision of a qualification for all medical professionals that tests their broad understanding of all types of pain and their treatment.

The EDPM is open to all qualified doctors who see and treat pain. Appropriate clinical experience in pain assessment and treatment is essential. Residents and fellows working in multidisciplinary pain centres or multidisciplinary pain clinics are ideal candidates, though the qualification is open to all doctors, specialists or general practitioners, with an interest in pain and its management.

What is the EDPP?

The purpose of the European Pain Federation EFIC Examination for the Diploma in Pain Physiotherapy (EDPP) is to improve the standard of pain assessment and treatment through the provision of a qualification for physiotherapists that tests their broad understanding of all types of pain and their treatment.

The EDPP is open to all qualified physiotherapists who see and treat people with pain. Demonstrable possession of a Physiotherapy Degree or Diploma is required, as well as evidence of registration with your national authority or professional body to certify your status as a physiotherapist.
