

A Standard Curriculum for Elementary Music

WITH SUPPLEMENTAL PHILOSOPHY STATEMENT

QUINLAN GRAY

Elementary K-6 Music Curriculum

An elementary music classroom is a place where the disciplines of the arts, humanities, history, and culture come together in a physical, emotional, and aesthetic experience designed to uplift, encourage, and excite the student. A primary goal of instruction in this classroom will be largely focused on helping students understand why we perform music and how we can perform it with others.

Emphasizing the pedagogical techniques of Karl Orff, we will focus on preparing our students for a lifelong of making music by allowing them to experience sound, rhythm, movement, harmony, and improvisation with the music itself. We will also implement elements of Dalcroze movement, improvisation, and collaboration to create a thriving peer-to-peer leaning community in the classroom. We will increase the level of musical accuracy in our students by exposing them to proper articulations, styles, and dynamics through listening to and experiencing quality musical repertoire. Finally, we will constantly seek to make music an enjoyable aesthetic experience and foster a lifelong desire to learn about and make music with those around them.

Curriculum Overviews

Curriculum Entity	Good Qualities	Bad Qualities
Davis County ¹	The layout is fantastic. It provides for a quick reference to what material should be taught to the students and when. The wording is like a conversation to the teacher. It gives clearly defined instructions as to what they should add to their curriculum at the beginning of each grade level. The multiple categories that are considered for each grade level ensure that students aren't getting "too much, too soon".	This curriculum lacks emphasis on resources. There are no technological, environmental, or literary resources to reflect what it is giving for each grade level. While focused on what should be added at the beginning of each grade level and for students of that age, it doesn't explicitly provide an end goal for the end of the year. Does not provide listening resources for high quality examples of proper music-making for the instructor to reference. While this curriculum design allows for strong song selection, it doesn't excel in providing applications for that song in an actual lesson.
Texas Music Educator Association ²	Well-Structured. Very rigid as far as what information should be taught and how it should be taught. This could be very beneficial to new teachers who are learning as they go. Each "TEK" provides the overall goal that is to be achieved through those objectives. Under each objective [e.g., K.4.1 (a)], there are several specific examples and instructions on how to achieve them.	Finding material for reference is made more difficult by the sporadic organization of each "strand" of material. There are no listening examples or external resources made available through the curriculum. The strict rigidity that provides structure to the teacher also limits them in the creative aspect and stops them from developing lesson materials that are ultra-specific to their own students.
Virginia Public Schools ³	Provides plenty of quality performers and repertoire pieces for the teacher to provide their students. Lists a wide variety of instructional objectives. Shows a clear progression of learning objectives from kindergarten through high school graduation.	At times, the overview is too wordy. The information could be much more concise and clear. Requires in-depth look at the content rather than a quick reference to the material. Among the quality performers listed, there are some that are not as good. There is an apparent lack of more top-tier classically trained ensembles and artists.
