What NibbleClassic is about...

The problem in the existing market:

- Lack of adoption, not easy to have access to cryptocurrency.
- A minimum of 70% of the population have heard of cryptocurrency, less than 15% of the population own it.
- Lack of real-world use cases.

The Nibble project wants to make cryptocurrency easier for people to understand, acquire and use. Bringing cryptocurrency to more people in a simplistic way.

The solution and the product:

A cryptocurrency designed with adoption in mind, allowing people to connect with each other and become familiar with how cryptocurrencies work.

- By providing education in a simple way via tutorials and community-based learning.
- By providing tools necessary for the mining process
- By providing facilities to buy/sell/exchange/use NibbleClassic

https://www.nibble-nibble.com is the hub for all solutions and products.

Competitive landscape & market size:

There are lots of new coins (altcoins) produced every day. We see our competitors as having a focus on their price, setting a value themselves on what they feel their project is worth.

This produces a lack of interest in the actual project itself, as financial gain is the main objective, the end consumer isn't taken into consideration, only the big corporations and how they can gain investment.

Many of these coins are short term and fail within the first few months.

Our objective is to support the adoption of cryptocurrency. Therefore, our focus is on keeping things simple for our community and future community.

The value of NibbleClassic will be determined by the general public, occurring naturally via the community and the use of exchanges. There is a limited supply of coins and therefore creating an economy through merchant adoption is a necessity and we welcome developers to build platforms enabling this.

Technical explanation of the economy and use case(s):

- NibbleClassic uses CryptoNight lite v7.
- There will be 210000000.00NBX available as a max supply
- Emission started at 200NBX as a reward per block
- Each block takes 150 seconds to mine
- Each block is unlocked and available for spend at 24 block confirmations

Our use case is quite a simple one: A cryptocurrency easily acquirable by any member of the general public.

Once acquired, being able to use the currency for purchasing products the general public would have access to.

Team behind the project:

Sups is the founder of NibbleClassic & The Nibble Developers.

The community of developers that have contributed towards the project form The Nibble Developers.

The project is not funded by any organisation, corporation or business, it's entirely built by community members and developers in their spare time.

This gives the project itself a decentralized stance, not only with the blockchain and network, but the development of applications and platforms available.

If you would like to contribute to the project, stop by on one of our social media platforms and introduce yourself. You don't need to be a developer, being part of the community is a great contribution.
