

04 April 2018

Dear Samantha and friends

We wanted to write and thank you for coming into our nursery and showing us how we could be scientists;

- 'My painting changed colour with cabbages'
- 'This was so cool'
- 'I made a rainbow'
- 'The crystals were pressed and made unicorn colours'

We loved taking part in the different experiments and you inspired us to carry on our science based learning back in our rooms. The rainbow density tower looked amazing and we have extended our learning to life sciences, with the planting of pea and bean seeds.

Our mummy's, daddies and carers had a great time too and this is some of the comments they made;

- 'A great opportunity for the kids to be hands on with science. Great and simple experiments for them to follow'.
- 'Fab, enjoyed it. A great day had by all'
- 'Great for kids and mums!'
- 'I thought it was very good. Ruth enjoyed making the slime and making the purple water change colour. We might even make slime over the weekend'.
- 'All the children were having a great time. Eva talked about it all afternoon and making a rainbow. Fab morning'.

Tricia also asked them the following questions as part of an evaluation and they had to score you from 1 -6;

Did the science day:

- Provide children with engaging science experiments
- Did they stimulate children's curiosity and questioning
- Did children have fun with science learning

And all the feedback was 6 (very well)

Thank you again for making science come alive.

Lots of love

All the staff and children at Westfield Family Nurture Centre
