

# INK REPELLANT

## Prevents Unwanted Pick Up Of Ink On Impression Cylinder

Ink Repellant is designed to reduce / eliminate the unwanted accumulation of ink on the impression cylinder. Ink Repellant will help prevent picking and piling problems associated with those heavy coverage 2-sided jobs. For the surface on paper cutter beds it removes all the oxidation that has built-up over the years, leaving a slick surface to slide paper over.

- Reduces ink piling on perfecting & impression cylinders
- Reduces ink picking during back up
- Effective longer than silicones or waxes
- Easily applied
- For use on paper cutter beds and jogging tables

### Direction For Use:

#### For Impression Cylinders:

Using a clean shop towel, apply an even layer onto a clean, dry impression cylinder (back cylinder). Allow paste to dry to a haze (approximately 5 minutes), dust off with a clean shop towel. It may be necessary to repeat the process on extremely dull or pitted surfaces.

#### For Cutter Beds and Jogging Tables:

Wipe all dust and build-up from surface to be treated. Apply an even layer and allow paste to dry to a haze (approximately 5 minutes), dust off with a clean cloth. On the initial application once the old oxidation has been removed the cutter bed will be slick enough to slide paper over it. Using Ink Repellant from time-to-time on the cutter beds will protect the metal from oxidation and keep the bed surface slick.

### Specifications:

VOC content lb. / gallon	0
VOC content grams / liter	234
Flashpoint	> 61°C
Color	Blue
CA. Compliant	No

### Available In:
