

Do You Want to Build a Snowman?

This is what Grandma Jenni's snowman looks like, but you can use your imagination!

You can break toothpicks in half to attach the feet, but I used long ones everywhere else. Some go through several pieces of Styrofoam. Don't poke the toothpicks in and out, or the holes you need will become too loose. One time is best!

I just twisted the black wire around the pipe cleaner for the fingers.

I used gluestick glue for the buttons and eyes, and for extra strength where needed.

Your snowman will make a better ornament or decoration than a toy. 😊

Good luck! (You might want to ask Mom or Dad to help a little.)
