

Research Centre on Migration (Ponza)

CISCA ■ Centro Italiano Studi per la Conservazione e l' Ambiente (CISCA)

The Research Centre is located on the amazing Ponza island, on the west side of the Italian coast and it hosts the station for migratory bird banding activities during the spring season. The Centre is currently implementing the 'Small Islands' project (Piccole Isole) and it also collaborates with the Veterinary Medicine University of Vienna (Austria), the University of Ferrara (Italy), the Max Planck Institute for Ornithology in Germany and the Tuscia University Ecology and Biological Sciences Department.

The ringing activities contribute to the research on ecophysiology and phenology of migratory birds. The collected data are useful both for monitoring the conditions of birds' populations in Europe as well as to estimate the impacts of land use and climate changes on birds' trends and status.

**The project will start on
the 11th of March and
end on the
26th of May 2017!**

To reserve your volunteering period
or to organize a visit at our centre
