Solar PV 'Ranchettes'

Sit Back and Harvest the Sunlight!

Massive commercial solar farms are too big, taking up many acres with difficult approval processes. Residential systems are too small, producing only enough electricity for a house. Our 'Ranchette' system is 'just right' - the perfect mid-scale solution for those who wish to put a small amount of sunny, extra land to good use. We have designed the solar ranchette for those land and business owners who would like to take advantage of the new economies that can be found in generating electricity from the sun. We can develop the project for you to own, or develop and own the system and pay you rent for your land.

- 100—500kW systems. 250kW standard
- 1/2 to 2 acres of open, sunny land
- Single or 3 phase power lines within 500'
- We plan, permit, build and manage
- Develop-for-Hire or Develop-to-Own
