Registration Information: scoliosisphysiotherapy@gmail.com

Course Highlights
The comprehensive 9 day C-1 BSPTS Scoliosis course is now offered in Canada providing detailed explanation of anatomy, etiology, examination, and treatment of scoliosis according to the principles of C.L Schroth – an evidence-based method used and respected in Europe for decades, and researched in Canada. Participants will learn to recognize and treat different scoliosis curve patterns and receive introduction to bracing principles. Course includes full day lectures, extensive lab time, observation of patients, and certification (pending passing of exam). Participants will leave with immediate skills to evaluate and treat scoliosis. Course size is limited so early registration is advised.
