

**Neuroimaging Investigation of mTBI and its Potentiation of PTSD in
Veterans, VA IRB # H140247****Category**

PTSD/TBI

Enrollment Closing Date

09/30/2019

Description

Dr. Huang and VA collaborators are conducting research on brain activity, brain function, and cognitive function on Veterans with traumatic brain injury (TBI) and/or post traumatic stress disorder (PTSD). This study involves 3 sessions: (1) neuropsychological testing and mental health assessment, (2) Magnetoencephalography (MEG) scan, (3) MRI scan completed over 2 visits.

Requirements

- * Veterans with a diagnosis of TBI and/or PTSD
- * Age 18 - 55
- * No metal objects in the body unless removable

Benefits

Your participation can help researchers understand more about traumatic brain injury (TBI) and post traumatic stress disorder (PTSD).
