

Computer-Based Treatment Study for PTSD

Category

PTSD/TBI

Enrollment Closing Date

Jan 1, 2022

Description

This study aims to evaluate the effectiveness of a computer-based, brain-training treatment program for PTSD in Veterans. Participants will attend 16 thirty-minute treatment sessions, with sessions occurring twice a week for 8 weeks. Participants will also undergo two MRI scans, clinical interviews, and complete questionnaires. Compensation for participation is \$300.00.

Requirements

To participate, you must be between the ages of 21-55, be safe to receive an MRI scan (i.e. have no metal in your body), and have experienced an interpersonal trauma (such as physical/ sexual assault, or emotional, physical, or sexual abuse).

Benefits

Your participation may help researchers evaluate the effects of a computer-based, brain-training program on the emotional and cognitive symptoms of PTSD.
