

## **fMRI Study Seeking People Interested in taking Zoloft for PTSD, Depression, or Anxiety**

**Category**

PTSD/TBI

**Enrollment Closing Date**

Jan 1, 2022

**Description**

Dr. Simmons and collaborators are investigating the neurological and genetic factors that may explain why some people respond more successfully than others to the medication Zoloft for PTSD, depression, or anxiety. This study includes 4-5 visits over the course of 4 months. Participants will undergo an MRI scan of their brain, genetic testing, clinical interviews, and questionnaires. Compensation for completing the study is \$250.

**Requirements**

You may be eligible to participate if you are a Veteran who was deployed to a combat zone after 9/11/2001 and are interested in taking Zoloft as a part of your standard course of care.

**Benefits**

Your participation may help researchers better understand why different people respond more successfully to treatment with Zoloft than others.
