

What do *you* see?

You can help scientists measure the quality of our night sky. For big star charts, observing dates, and other resources, visit **Globe at Night** at www.globeatnight.org.

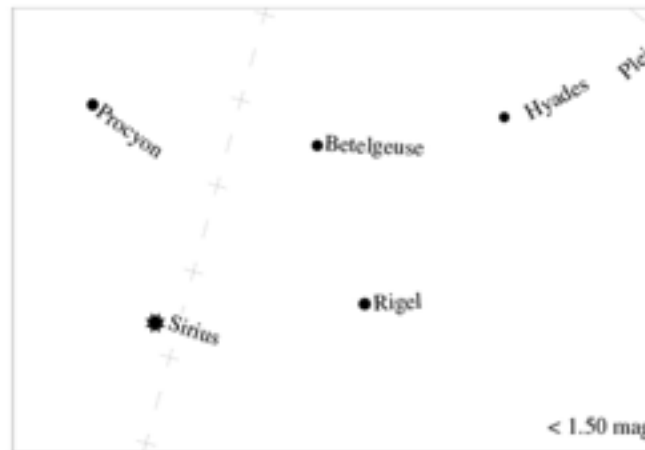

Thanks for taking steps—big or small—to lessen the impact of light on the night environment.

Easy as 1-2-3!

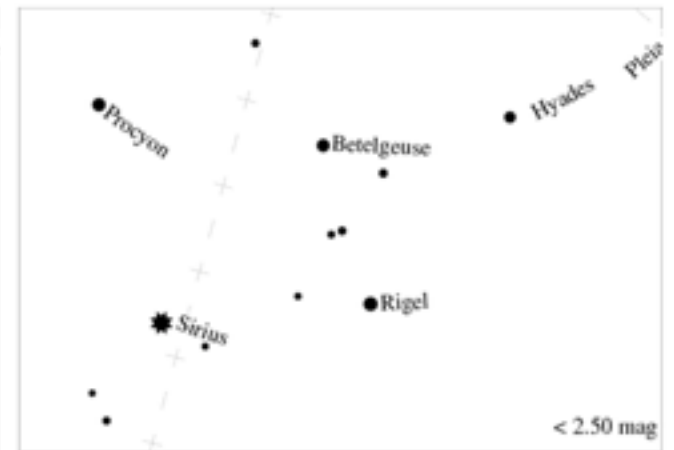

1. Find Orion at night.
2. Select the magnitude chart that best matches your view.
3. Submit your location and chart number.
