Leading design and engineering consultancy in Singapore becomes part of the Ramboll Group

Singapore – 7 January 2020

Web Structures is now part of Ramboll group. Well known for their cutting edge, creative and “fusion engineering” design, Web Structures will spearhead Ramboll’s expansion into quality structural design in Asia Pacific and beyond.

Web Structures will continue to operate under the same name, overall management structure and design ethos.

“This fulfills a long-term and strategic ambition of Ramboll’s. It enables us to significantly expand into the design engineering sphere, adds specialist capabilities to our High Rise offering and provides us with a robust platform for growing in South East Asia” says Søren Holm Johansen, Ramboll’s Group Executive Director, COO Markets.

“We have been watching Web Structures from close quarters now for many years, as our teams have been working independently on a number of projects together. We have been very impressed with the rigour and dedication to design and quality that has been the hallmark of Web Structures. We look forward to more of the same” said Richard Beard, Managing Director Ramboll Buildings.

“This was unlike most other integrations, it was not the commercial perspective driving the process but the strategic fit of our ambitions and approach” said Dr Hossein Rezai, founding director of Web Structures. “Ramboll’s impressive environmental credentials tilted the balance for us. At these times of climate crisis and serious threat to biodiversity, Ramboll’s responsible attitude towards the environment is commendable. We are joining forces to work harder together to achieve these goals through design” he added.

About Web Structures

Web Structures is an internationally-acclaimed civil, structural and geotechnical engineering consultancy delivering high quality solutions across the globe. Employing diverse talent from the UK, Europe and Asia, Web Structures provides worldwide design consultancy at the highest end of the international spectrum. With offices in Singapore, Malaysia, Shanghai, London and Indonesia, the civil, structural and geotechnical practice also offers specialist design services in related engineering fields. With over 650 projects in more than 28 countries since 1996, the practice has worked with the world's most renowned architects, developers and consultants.
