

CONCRETE ACID STAINS

Create beautiful, unique designer floors with our EAGLE ACID STAINS!

ACID STAIN is produced in 14 stylish colors and creates varied color patterns on concrete by chemicals reacting with the cement on the surface of the substrate. Every concrete floor contains different amounts of minerals and varying porosity, resulting in more vibrant colorations and shades on the same floor. No two floors will ever look alike! The mottled, and varied, appearance of acid stained floors is one of the main reasons acid stained finishes have so much appeal.
