

Cyber 2.0

No More Cyber War

The Opportunity

We offer a game changing system redefining the cyber market, changing it significantly and bringing a breath of fresh air to the industry.

The Challenge

Organizations are constantly facing the threat of cyber attacks with no real solution that eliminates the constant threats. Present solutions are all based on similar methodologies and till today, there is no solution that cannot be bypassed or penetrated.

What We Do

We create a radical shift in the way one thinks about cyber threats. Cyber 2.0 explores technology in unconventional ways, introducing a totally new approach that ultimately blocks all cyber-attacks within organizational networks, including new and unknown attack methods.

Our system will protect the organization against the next unknown attack, even if it bypasses all other defense systems.

How We Do It

Our ground breaking technology is based on a mathematical chaos model that:

- Does not rely on the infected computer (which is likely to be uncontrollable)
- Does not need to study the organization's routine
- Does not use existing attack database

The Solution

Cyber 2.0 Chaos Engine blocks all attacks, without having to identify them first.

Blocks totally all malicious programs (existing and future) from connecting to their creators - including all information leaks, even if they predate the Cyber 2.0 deployment.

Continues to defend the organization, even when the system itself is breached.

Milestones

	2015		2016				2017				2018
	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	
Development	Development					Beta		Production			
Patents	Applied 1-4					Applied 5-7		Applied 8		Approved 1+2	
External Tests			EY		Hackers						
Israeli Chief Scientist	First Period					Second Period					
Customers						Friendly Pilot		10	30	60	

Revenue Model

Yearly payment of \$60 for every agent

Hertzal Ozer Founder & CEO

CEO & Chairman of the Board of 8 leading companies in Israel (Last position: CEO & Chairman of HOT Telecommunication Systems)
MBA & BA, Hebrew University of Jerusalem

Erez Kaplan Haelion Founder & CTO

Advisor of Microsoft
Designed, integrated and led projects for complex Monitoring and Control Systems
Founder & CTO of several startup companies
