The portrait has continued to be one of the most recognised, revisited, and arguably the most celebrated art forms throughout history. Exclusive to Nottingham Castle, this exhibition demonstrates how classical and traditional figurative portraiture continues to inspire artists today, and remains relevant within contemporary artistic discourse.

*Reportrait* presents thirteen artists who have reimagined historical sources, altered or disrupted typical notions of how the portrait is defined, or used an image or reproduction as a starting point to create something new.

Consisting of new commissions made in direct response to Nottingham City Museums & Galleries collections, loans, and works straight from the artist's studios, the exhibition showcases painting, photography, installation, digital art, sculpture, video and drawing, many of which have never been seen in public before.
