

360° VIEW

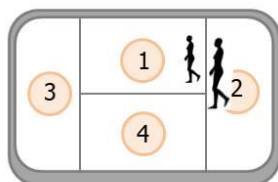

Increase the safety in your warehouse by giving the driver of a vehicle a better image of his surroundings. Often, accidents occur in warehouses due to a limited view of the driver's environment. By giving the driver a 270° to 360° view around the vehicle, the operational safety is increased.

Four cameras are installed on the vehicle so we can form a complete picture of the front and rear and both sides for an optimal view of the vehicle. At the back of the vehicle we mount a DUAL-camera that offers a 175° rear view, a much wider image than a conventional rear view camera.

The system goes beyond a bird's-eye view. The image representations of the four cameras are visible on a split screen on a multivision monitor. This allows a driver to see a possible collision arrive faster and thus react faster. This means we reduce the possible damage to your vehicles, goods and warehouse.

Below you can see an example of our 360° solution on a forklift truck.

1. Front view
2. Right view
3. Left view
4. Rear view
