

WHAT CAN CHIROPRACTIC CARE DO FOR YOUR CHILD?

Today we find more parents bringing their children to chiropractors for day-to-day health concerns we're all familiar with: colds, sore throats, ear infections, fevers, colic, asthma, tonsillitis, allergies, bed-wetting, infections, pains, falls, stomach-aches, and the hundred and one little and big things children go through as they grow up.

Chiropractic's purpose is to remove interferences to the natural healing power running through the body. When that power is unleashed the healing that results may be profound.

Chiropractors Do Not Treat Disease

It's most important to understand that chiropractic is not a treatment for disease. It's purpose is to reduce spinal nerve stress, a serious and often painless condition most children (and adults) have in their bodies. Spinal nerve stress interferes with the proper functioning of the nervous system, can weaken internal organs and organ systems, lower resistance, reduce healing potential and set the stage for sickness and disorders of all kinds.

When a chiropractor frees the nervous system from spinal stress, the healing power of the body is unleashed: the immune system functions more efficiently, resistance to disease increases, and your child's body functions more efficiently. Your child can respond to internal and external environmental stresses such as germs, changes in temperature, humidity, toxins, pollen and all the other stresses he/she comes in contact with more efficiently.

So although children with diseases are often brought to the chiropractor, the chiropractor is not treating their diseases but is instead freeing them of spinal nerve stress, thus permitting their body's natural healing potential to function at its best.

What Exactly Is Nerve Stress?

Spinal nerve stress (also referred to as vertebral subluxations, the subluxation complex, or "pinched nerves") is a misalignment or distortion of the spinal column, skull, hips, and related tissues (the structural system) that irritate, stretch, impinge or otherwise interfere with the proper function of the nervous system (brain, spinal cord, spinal nerves and outlying or peripheral nerves). Since the nervous system controls the function of the body, any interference to it can have wide-ranging effects.

All children function better with 100% nerve function. All children deserve the right to express their fullest potential. Chiropractic care for children is safe, gentle and effective. It allows for the opportunity for maximum potential for well-being. If you have any questions or would like to schedule an appointment, call our office at 419-568-BACK(2225)!
