

LAB' COMPOSITE

\$259.00 + gst Ten swabs taken from sites in the home.
(recommended one swab per room, or per
10 m² of room area)

Ideal for an indication of any methamphetamine contamination concerns, and further testing if levels of concern are identified in analysis results. Best if you believe your property may have methamphetamine contamination

Individual samples are taken from each room, or 10 m² area in the property. The samples are initially tested together and the total cumulative level is identified.

If the level is of concern, each sample can be analysed (\$69 + gst per sample) to identify any of concern. Subsequent sets of up to 10 sites can be taken for \$209 + gst.

This test complies with NZS. 8510:2017 - Standards NZ Testing and decontamination of methamphetamine-contaminated properties.

Analytica Laboratories typically report within three business days.

Once your invoice is paid, and the Analytica results are available, ZeroStone will email their report (with the Analytica Laboratories report attached).

If you require the report with results on a more urgent basis please contact us to discuss options.

WE WILL MATCH ANY GENUINE PRICE AND TERMS | CONDITIONS QUOTED
(SIGNIFICANT TRAVEL EXCLUDED)

Standards NZ levels:

Before reoccupation of a premises, surface wipes for methamphetamine should not exceed 1.5 µg | 100 cm² in high-use areas (includes garages and sheds etc), and 3.8 µg | 100 cm² in low-use areas (roof space etc)
'µg' = micrograms
