

FIELD | LAB' COMPOSITE

\$179.00 + gst Ten swabs (2 sets of 5) taken from sites in the home.
(recommended one swab per room, or per 10 m² of room area)

Recommended for an indication of any methamphetamine contamination concerns

The Field | Lab' Composite test provides a "methamphetamine detected / methamphetamine not detected" result, and the total cumulative level of contamination.

If the level is of concern, each sample of 5 can be analysed (\$69 + gst per sample) to narrow down which group of rooms in particular is of concern. However, it may be better take comprehensive tests!

Any extra set of five samples (i.e. when there are more than 10 samples to be taken from the property) can be taken for \$25 + gst.

This test complies with NZS. 8510:2017 - Standards NZ Testing and decontamination of methamphetamine-contaminated properties. Analytica Laboratories typically report within three business days.

Once your invoice is paid, and the Analytica results are available, ZeroStone will email their report (with the Analytica Laboratories report attached).

If you require the report with results on a more urgent basis please contact us to discuss options.

To obtain methamphetamine level readings from individual sites tested, Comprehensive Tests are required.

Standards NZ levels:

Before reoccupation of a premises, surface wipes for methamphetamine should not exceed 1.5 µg | 100 cm² in high-use areas (includes garages and sheds etc), and 3.8 µg | 100 cm² in low-use areas (roof space etc)

'µg' = micrograms
