

Year 4/5 spent a very interesting day at Space to Learn, they were there to use the computers provided by Space to Learn to use a program called **Kodu**. Kodu is a visual programming tool that is designed to be accessible by anyone.

Kodu is a simple programming, program. Where the user can build their environment, and then create their own characters to inhabit that environment. The main character is Kodu where the programmer's name comes from. They then have to program their characters to move around the setting, having them complete the games and challenges they have come up with.

After spending most of the morning figuring out how the programme works it was time for a bit of fresh air.

Before getting back to coding, some children needed help but the staff were on hand to help, and before they knew it time it was time for lunch.

On the afternoon they were set free and given the chance to make their own game, using the skills that they been taught.
