CHAPTER 25

CHAPTER OUTLINE
AND FOCUS QUESTIONS

The Road to World War I
What were the long-range and immediate causes of World War I?

The War
What did the belligerents expect at the beginning of World War I, and why did the course of the war turn out to be so different from their expectations? How did World War I affect the belligerents’ governmental and political institutions, economic affairs, and social life?

War and Revolution
What were the causes of the Russian Revolution of 1917, and why did the Bolsheviks prevail in the civil war and gain control of Russia?

The Peace Settlement
What were the objectives of the chief participants at the Paris Peace Conference of 1919, and how closely did the final settlement reflect these objectives?

CRITICAL THINKING
What was the relationship between World War I and the Russian Revolution?

ON JULY 1, 1916, British and French infantry forces attacked German defensive lines along a 25-mile front near the Somme River in France. Each soldier carried almost 70 pounds of equipment, making it “impossible to move much quicker than a slow walk.” German machine guns soon opened fire: “We were able to see our comrades move forward in an attempt to cross No-Man’s Land, only to be mown down like meadow grass,” recalled one British soldier. “I felt sick at the sight of this carnage and remember weeping.”¹ In one day, more than 21,000 British soldiers died. After six months of fighting, the British had advanced 5 miles; one million British, French, and German soldiers had been killed or wounded.

Philip Gibbs, an English war correspondent, described what he saw in the German trenches that the British forces overran: “Victory! . . . Some of the German dead were young boys, too young to be killed for old men’s crimes, and others might have been old or young. One could not tell because they had no faces, and were just masses of raw flesh in rags of uniforms. Legs and arms lay separate without any bodies thereabout.”²

World War I (1914–1918) was the defining event of the twentieth century. It devastated the prewar economic, social, and political order of Europe, and its uncertain outcome served to prepare the way for an even more destructive war. Overwhelmed by the size of its battles, the number of its casualties, and the extent of its impact on all facets of European life, contemporaries referred to it simply as the Great War.
The Great War was all the more disturbing to Europeans because it came after a period that many believed to have been an age of progress. There had been international crises before 1914, but somehow Europeans had managed to avoid serious and prolonged military confrontations. When smaller European states had gone to war, as in the Balkans in 1912 and 1913, the great European powers had shown the ability to keep the conflict localized. Material prosperity and a fervid belief in scientific and technological progress had convinced many people that Europe stood on the verge of creating the utopia that humans had dreamed of for centuries. The historian Arnold Toynbee expressed what the pre-World War I era had meant to his generation:

[It was expected] that life throughout the World would become more rational, more humane, and more democratic and that, slowly, but surely, political democracy would produce greater social justice. We had also expected that the progress of science and technology would make mankind richer, and that this increasing wealth would gradually spread from a minority to a majority. We had expected that all this would happen peacefully. In fact we thought that mankind’s course was set for an earthly paradise.3

After 1918, it was no longer possible to maintain naive illusions about the progress of Western civilization. As World War I was followed by the destructiveness of World War II and the mass murder machines of totalitarian regimes, it became all too apparent that instead of a utopia, European civilization had become a nightmare. The Great War resulted not only in great loss of life and property but also in the annihilation of one of the basic intellectual precepts on which Western civilization had been thought to have been founded—the belief in progress. A sense of hopelessness and despair soon replaced blind faith in progress. World War I and the revolutions it spawned can properly be seen as the first stage in the crisis of the twentieth century.

### The Road to World War I

**Focus Question:** What were the long-range and immediate causes of World War I?

On June 28, 1914, the heir to the Austrian throne, Archduke Francis Ferdinand, was assassinated in the Bosnian city of Sarajevo. Although this event precipitated the confrontation between Austria and Serbia that led to World War I, war was not inevitable. Previous assassinations of European leaders had not led to war, and European statesmen had managed to localize such conflicts. Although the decisions that European statesmen made during this crisis were crucial in leading to war, there were also long-range underlying forces that were propelling Europeans toward armed conflict.

### Nationalism

In the first half of the nineteenth century, liberals had maintained that the organization of European states along national lines would lead to a peaceful Europe based on a sense of international fraternity. They had been very wrong. The system of nation-states that had emerged in Europe in the second half of the nineteenth century led not to cooperation but to competition. Rivalries over colonial and commercial interests intensified during an era of frenzied imperialist expansion, and the division of Europe’s great powers into two loose alliances (Germany, Austria, and Italy and France, Great Britain, and Russia) only added to the tensions (see Map 25.1). The series of crises that tested these alliances in the early years of the new century had taught European states a dangerous lesson. Governments that had exercised restraint in order to avoid war wound up being publicly humiliated, whereas those that went to the brink of war to maintain their national interests had often been praised for having preserved national honor. In either case, by 1914, the major European states had come to believe that their allies were important and that their security depended on supporting those allies, even when they took foolish risks.

Diplomacy based on brinkmanship was especially frightening in view of the nature of the European state system. Each nation-state regarded itself as sovereign, subject to no higher interest or authority. Each state was motivated by its own self-interest and success. As Emperor William II of Germany remarked, “In questions of honor and vital interests, you don’t consult others.” Such attitudes made war an ever-present possibility, particularly since most statesmen considered war an acceptable way to preserve the power of their national states. And within each state, there were circles of political and military leaders who thought that war was inevitable and provided an opportunity to achieve their goals. In Germany, there were those who advocated the creation of a German empire by acquiring parts of Russia and possibly even parts of Belgium and France. France wished to regain control of Alsace-Lorraine, which had been seized by the Germans in the Franco-Prussian War. Austria-Hungary sought to prevent Serbia from creating a large Serbian state at the expense of its own multinational empire. Britain sought to preserve its world empire, and Russia felt compelled to maintain its great power status by being a protector of its fellow Slavic peoples in the Balkans.

### Internal Dissent

The growth of nationalism in the nineteenth century had yet another serious consequence. Not all ethnic groups had achieved the goal of nationhood. Slavic minorities in the Balkans and the Austrian Empire, for example, still dreamed of creating their own national states. So did the Irish in the British Empire and the Poles in the Russian Empire.

National aspirations, however, were not the only source of internal strife at the beginning of the twentieth century.
Socialist labor movements had grown more powerful and were increasingly inclined to use strikes, even violent ones, to achieve their goals. Some conservative leaders, alarmed at the increase in labor strife and class division, even feared that European nations were on the verge of revolution. Did these statesmen opt for war in 1914 because they believed that “prosecuting an active foreign policy,” as one leader expressed it, would smother “internal troubles”? Some historians have argued that the desire to suppress internal disorder may have encouraged some leaders to take the plunge into war in 1914.

**Militarism**

The growth of large mass armies after 1900 not only heightened the existing tensions in Europe but made it inevitable that if war did come, it would be highly destructive. **Conscription** had been established as a regular practice in most Western countries before 1914 (the United States and Britain were major exceptions). European military machines had doubled in size between 1890 and 1914. With its 1.3 million men, the Russian army had grown to be the largest, but the French and Germans were not far behind with 900,000 each. The British, Italian, and Austrian armies numbered between 250,000 and 500,000 soldiers. Most European land armies were filled with peasants, since many young, urban working-class males were unable to pass the physical examinations required for military service.

**Militarism**, however, involved more than just large armies. As armies grew, so did the influence of military leaders, who drew up vast and complex plans for quickly mobilizing millions of men and enormous quantities of supplies in the event of war. Fearful that changes in these plans would create chaos in the armed forces, military leaders insisted that their plans could not be altered. In the crises during the summer of 1914, the generals’ lack of flexibility forced European political leaders to make decisions for military instead of political reasons.

**The Outbreak of War: The Summer of 1914**

Militarism, nationalism, and the desire to stifle internal dissent may all have played a role in the coming of World War I, but the decisions made by European leaders in the summer of 1914 directly precipitated the conflict. It was another crisis in the Balkans that forced this predicament on European statesmen.

**ANOTHER CRISIS IN THE BALKANS** As we have seen, states in southeastern Europe had struggled to free themselves from Ottoman rule in the course of the nineteenth and early twentieth centuries. But the rivalry between Austria-Hungary and Russia for domination of these new states created serious tensions in the region. The crises between 1908 and 1913 had only intensified the antagonisms.
By 1914, Serbia, supported by Russia, was determined to create a large, independent Slavic state in the Balkans, but Austria, which had its own Slavic minorities to contend with, was equally set on preventing that possibility. Many Europeans perceived the inherent dangers in this combination of Serbian ambition bolstered by Russian opposition to Austria and Austria’s conviction that Serbia’s success would mean the end of its empire. The British ambassador to Vienna wrote in 1913:

Serbia will some day set Europe by the ears, and bring about a universal war on the Continent. . . . I cannot tell you how exasperated people are getting here at the continual worry which that little country causes to Austria under encouragement from Russia. . . . It will be lucky if Europe succeeds in avoiding war as a result of the present crisis. The next time a Serbian crisis arises . . . I feel sure that Austria-Hungary will refuse to admit of any Russian interference in the dispute and that she will proceed to settle her differences with her little neighbor by herself.4

It was against this backdrop of mutual distrust and hatred between Austria-Hungary and Russia, on the one hand, and Austria-Hungary and Serbia, on the other, that the events of the summer of 1914 played out.

ASSASSINATION OF FRANCIS FERDINAND The assassination of the Austrian Archduke Francis Ferdinand and his wife, Sophia, on June 28, 1914, was carried out by a Bosnian activist who worked for the Black Hand, a Serbian terrorist organization dedicated to the creation of a pan-Slavic kingdom. Although the Austrian government did not know whether the Serbian government had been directly involved in the archduke’s assassination, it saw an opportunity to “render Serbia impotent once and for all by a display of force,” as the Austrian foreign minister put it. Fearful of Russian intervention on Serbia’s behalf, Austrian leaders sought the backing of their German allies. Emperor William II and his chancellor, Theobald von Bethmann-Hollweg (TAY-oh-bahl fun BET-man-HOL-vyek), responded with the infamous “blank check,” their assurance that Austria-Hungary could rely on Germany’s “full support,” even if “matters went to the length of a war between Austria-Hungary and Russia.” Much historical debate has focused on this “blank check” extended to the Austrians. Did the Germans realize that an Austrian-Serbian war could lead to a wider war? If so, did they actually want one? Historians are still divided on the answers to these questions.

Led by Franz Conrad von Hötzendorf (FRAHNTS KON-raht fun HEHT-sen-dorf), chief of the Austro-Hungarian General Staff, who thought war with Serbia was both necessary and inevitable, Austrian leaders had already decided by July 14 to send Serbia an ultimatum that threatened war. But the Austrians decided to wait until the end of the official French state visit to Russia before issuing the ultimatum. On July 23, the day the French president left Russia, Austrian leaders issued their ultimatum to Serbia. Their demands were so extreme that Serbia had little choice but to reject some of them in order to preserve its sovereignty. Austria then declared war on Serbia on July 28. Although Austria had hoped to keep the war limited to Serbia and Austria in order to ensure its success in the Balkans, these hopes soon vanished.

DECLARATIONS OF WAR Still smarting from its humiliation in the Bosnian crisis of 1908, Russia was determined to support Serbia’s cause. On July 28, Tsar Nicholas II ordered partial mobilization of the Russian army against Austria. At this point, the rigidity of the military war plans played havoc with diplomatic and political decisions. The Russian General Staff informed the tsar that their mobilization plans were based on a war against both Germany and Austria simultaneously. They could not execute partial mobilization without creating chaos in the army. Consequently, the Russian government ordered full mobilization of the Russian army on July 29, knowing that the Germans would consider this an act of war against them (see the box on p. 779). Germany responded to Russian mobilization with its own ultimatum that the Russians must halt their mobilization within twelve hours. When the Russians ignored it, Germany declared war on Russia on August 1.

At this stage of the conflict, German war plans determined whether France would become involved in the war. Under the guidance of General Alfred von Schlieffen (SHLEE-fen), chief of staff from 1891 to 1905, the German General Staff had devised a military plan based on the assumption of a two-front war with France and Russia, since the two powers had formed a

"You Have to Bear the Responsibility for War or Peace"

After Austria declared war on Serbia on July 28, 1914, Russian support of Serbia and German support of Austria threatened to escalate the conflict in the Balkans into a wider war. As we can see in these last-minute telegrams between the Russians and the Germans, neither side was able to accept the other’s line of reasoning.

Communications between Berlin and Saint Petersburg on the Eve of World War I

Emperor William II to Tsar Nicholas II, July 28, 10:45 P.M.
I have heard with the greatest anxiety of the impression which is caused by the action of Austria-Hungary against Servia [Serbia]. The inscrupulous agitation which has been going on for years in Servia, has led to the revolting crime of which Archduke Franz Ferdinand has become a victim. The spirit which made the Servians murder their own King and his consort still dominates that country. Doubtless You will agree with me that both of us, You as well as I, and all other sovereigns, have a common interest to insist that all those who are responsible for this horrible murder shall suffer their deserved punishment. . . .

Your most sincere and devoted friend and cousin

(Signed)
Wilhelm

Tsar Nicholas II to Emperor William II, July 29, 1:00 P.M.
I am glad that You are back in Germany. In this serious moment I ask You earnestly to help me. An ignominious war has been declared against a weak country and in Russia the indignation which I full share is tremendous. I fear that very soon I shall be unable to resist the pressure exercised upon me and that I shall be forced to take measures which will lead to war. To prevent a calamity as a European war would be, I urge You in the name of our old friendship to do all in Your power to restrain Your ally from going too far.

(Signed)
Nicholas

Emperor William II to Tsar Nicholas II, July 29, 6:30 P.M.
I have received Your telegram and I share Your desire for the conservation of peace. However: I cannot—as I told You in my first telegram—consider the action of Austria-Hungary as an “ignominious war.” Austria-Hungary knows from experience that the promises of Servia as long as they are merely on paper are entirely unreliable. . . . I believe that a direct understanding is possible and desirable between Your Government and Vienna, an understanding which I—as I have already telegraphed You—my Government endeavors to aid with all possible effort. Naturally military measures by Russia, which might be construed as a menace by Austria-Hungary, would accelerate a calamity which both of us desire to avoid and would undermine my position as mediator which—upon Your appeal to my friendship and aid—I willingly accepted.

(Signed)
Wilhelm

German Chancellor to German Ambassador at Saint Petersburg, July 31, URGENT
In spite of negotiations still pending and although we have up to this hour made no preparations for mobilization, Russia has mobilized her entire army and navy, hence also against us. On account of these Russian measures, we have been forced, for the safety of the country, to proclaim the threatening state of war, which does not yet imply mobilization. Mobilization, however, is bound to follow if Russia does not stop every measure of war against us and against Austria-Hungary within 12 hours, and notifies us definitely to this effect. Please to communicate this at once to M. Sasonof and wire hour of communication. E-

Q How do the telegrams exchanged between William II and Nicholas II reveal why the Europeans foolishly went to war in 1914? What do they tell us about the nature of the relationship between these two monarchs?
issuing an ultimatum to Belgium on August 2 demanding the right of German troops to pass through Belgian territory. On August 4, Great Britain declared war on Germany, officially over this violation of Belgian neutrality but in fact over the British desire to maintain world power. As one British diplomat argued, if Germany and Austria were to win the war, “what would be the position of a friendless England?” By August 4, all the great powers of Europe were at war. Through all the maneuvering of the last few days before the war, one fact stands out—all the great powers seemed willing to risk war. They were not disappointed.

The War

**Focus Questions**: What did the belligerents expect at the beginning of World War I, and why did the course of the war turn out to be so different from their expectations? How did World War I affect the belligerents’ governmental and political institutions, economic affairs, and social life?

Before 1914, many political leaders had become convinced that war involved so many political and economic risks that it was not worth fighting. Others had believed that “rational” diplomats could control any situation and prevent the outbreak of war. At the beginning of August 1914, both of these prewar illusions were shattered, but the new illusions that replaced them soon proved to be equally foolish.

1914–1915: Illusions and Stalemate

Many Europeans went to war in 1914 with remarkable enthusiasm (see the box on p. 781). Government propaganda had been successful in stirring up national antagonisms before the war. Now, in August 1914, the urgent pleas of governments for defense against aggressors found many receptive ears in every belligerent nation. Middle-class crowds, often composed of young students, were especially enthusiastic, but workers in the cities and peasants in the countryside were considerably less eager for war. Once the war began, however, most people seemed genuinely convinced that their nation’s cause was just. Even domestic differences were temporarily shelved in the midst of war fever. Socialists had long derided “imperialist war” as a blow against the common interests that united the working classes of all countries. Nationalism, however, proved more powerful than working-class solidarity in the summer of 1914 as socialist parties everywhere dropped plans for strikes and workers expressed their readiness to fight for their country. The German Social Democrats, for example, decided that it was imperative to “safeguard the culture and independence of our own country.”

A new set of illusions fed the enthusiasm for war. Almost everyone in August 1914 believed that the war
The Excitement of War

The incredible outpouring of patriotic enthusiasm that greeted the declaration of war at the beginning of August 1914 demonstrated the power that nationalistic feeling had attained at the beginning of the twentieth century. Many Europeans seemingly believed that the war had given them a higher purpose, a renewed dedication to the greatness of their nations. These selections are taken from three sources: the autobiography of Stefan Zweig, an Austrian writer; the memoirs of Robert Graves, a British writer; and a letter by a German soldier, Walter Limmer, to his parents.

Stefan Zweig, *The World of Yesterday*

The next morning I was in Austria. In every station placards had been put up announcing general mobilization. The trains were filled with fresh recruits, banners were flying, music sounded, and in Vienna I found the entire city in a tumult. . . . There were parades in the street, flags, ribbons, and music burst forth everywhere, young recruits were marching triumphantly, their faces lighting up at the cheering. . . .

And to be truthful, I must acknowledge that there was a majestic, rapturous, and even seductive something in this first outbreak of the people from which one could escape only with difficulty. And in spite of all my hatred and aversion for war, I should not like to have missed the memory of those days. As never before, thousands and hundreds of thousands felt what they should have felt in peace time, that they belonged together. A city of two million, a country of nearly fifty million, in that hour felt that they were participating in world history, in a moment which would never recur, and that each one was called upon to cast his infinitesimal self into the glowing mass, there to be purified of all selfishness. All differences of class, rank, and language were flooded over at that moment by the rushing feeling of fraternity. . . .

What did the great mass know of war in 1914, after nearly half a century of peace? They did not know war, they had hardly given it a thought. It had become legendary, and distance had made it seem romantic and heroic. They still saw it in the perspective of their school readers and of paintings in museums; brilliant cavalry attacks in glittering uniforms, the fatal shot always straight through the heart, the entire campaign a resounding march of victory—"We'll be home at Christmas," the recruits shouted laughingly to their mothers in August of 1914. . . . A rapid excursion into the romantic, a wild, manly adventure—that is how the war of 1914 was painted in the imagination of the simple man, and the younger people were honestly afraid that they might miss this most wonderful and exciting experience of their lives; that is why they hurried and thronged to the colors, and that is why they shouted and sang in the trains that carried them to the slaughter; wildly and feverishly the red wave of blood coursed through the veins of the entire nation.

Robert Graves, *Goodbye to All That*

I had just finished with Charterhouse and gone up to Harlech, when England declared war on Germany. A day or two later I decided to enlist. In the first place, though the papers predicted only a very short war—over by Christmas at the outside—I hoped that it might last long enough to delay my going to Oxford in October, which I dreaded. Nor did I work out the possibilities of getting actively engaged in the fighting, expecting garrison service at home, while the regular forces were away. In the second place, I was outraged to read of the Germans' cynical violation of Belgian neutrality. Though I discounted perhaps twenty per cent of the atrocity details as wartime exaggeration, that was not, of course, sufficient.

Walter Limmer, Letter to His Parents

In any case I mean to go into this business. . . . That is the simple duty of every one of us. And this feeling is universal among the soldiers, especially since the night when England's declaration of war was announced in the barracks. We none of us got to sleep till three o'clock in the morning, we were so full of excitement, fury, and enthusiasm. It is a joy to go to the Front with such comrades. We are bound to be victorious! Nothing else is possible in the face of such determination to win. . . .

Q: What do these excerpts reveal about the motivations of people to join and support World War I? Do the excerpts reveal anything about the power of nationalism in Europe in the early twentieth century?
Then, too, war held a fatal attraction for many people. To some, war was an exhilarating release from humdrum bourgeois existence, from a “world grown old and cold and weary,” as one poet wrote. To some, war meant a glorious adventure, as a young German student wrote to his parents: “My dear ones, be proud that you live in such a nation and that you . . . have the privilege of sending those you love into so glorious a battle.” And finally, some believed that the war would have a redemptive effect, that millions would abandon their petty preoccupations with material life, ridding the nation of selfishness and sparking a national rebirth based on self-sacrifice, heroism, and nobility. All of these illusions about war died painful deaths on the battlefields of World War I.

**WAR IN THE WEST** German hopes for a quick end to the war rested on a military gamble. The Schlieffen Plan had called for the German army to proceed through Belgium into northern France with a vast encircling movement that would sweep around Paris and surround most of the French army. But the plan suffered a major defect from the beginning; it called for a strong right flank for the encircling of Paris, but German military leaders, concerned about a Russian invasion in the east, had moved forces from the right flank to strengthen the German army in the east.

On August 4, German troops crossed into Belgium. They encountered little resistance, but when they did, they responded with fierce measures, burning villages, killing civilians, and senselessly destroying a good part of the city of Louvain, including the university library.

By the first week of September, the Germans had reached the Marne River, only 20 miles from Paris. The Germans seemed on the verge of success but had underestimated the speed with which the British would be able to mobilize and put troops into battle in France. An unexpected counterattack by British and French forces under the French commander General Joseph Joffre (ZHUFF-rub) stopped the Germans at the First Battle of the Marne (September 6–10) east of Paris (see Map 25.2). The German troops fell back, but the exhausted French army was unable to pursue its advantage. The war quickly turned into a stalemate as neither the Germans nor the French could dislodge the other from the trenches they had begun to dig for shelter. Two lines of trenches soon extended from the English Channel to the frontiers of Switzerland. The Western Front had become bogged down in trench warfare, which kept both sides in virtually the same positions for four years.

MAP 25.2 The Western Front, 1914–1918. The Western Front was the site of massive carnage; millions of soldiers died in offensives and counteroffensives as they moved battle lines a few miles at a time in France and Belgium from 1914 to 1917. Soldiers in the trenches were often surrounded by the rotting bodies of dead comrades.

Q **What is the approximate distance between the armistice line near Sedan and the closest approach of the Germans to Paris?**

[View an animated version of this map or related maps on the CourseMate website.]
WAR IN THE EAST  In contrast to the west, the war in the east was marked by much more mobility, although the cost in lives was equally enormous. At the beginning of the war, the Russian army moved into eastern Germany but was decisively defeated at the Battles of Tannenberg on August 30 and the Masurian Lakes on September 15 (see Map 25.3). These battles established the military reputations of the commandant general, Paul von Hindenburg (POWL fun HIN-den-boork), and his chief of staff, General Erich Ludendorff (LOO-dun-dorff). The Russians were no longer a threat to German territory.

The Austrians, Germany’s allies, fared less well initially. They had been defeated by the Russians in Galicia and thrown out of Serbia as well. To make matters worse, the Italians broke their alliance with the Germans and Austrians and entered the war on the Allied side by attacking Austria in May 1915. By this time, the Germans had come to the aid of the Austrians. A German-Austrian army defeated and routed the Russian army in Galicia and pushed the Russians back 300 miles into their own territory. Russian casualties stood at 2.5 million killed, captured, or wounded; the Russians had almost been knocked out of the war. Buoyed by their success, the Germans and Austrians, joined by the Bulgarians in September 1915, attacked and eliminated Serbia from the war.

1916–1917: The Great Slaughter

The successes in the east enabled the Germans to move back to the offensive in the west. The early trenches dug in 1914 had by now become elaborate systems of defense. Both lines of trenches were protected by barbed wire entanglements 3 to 5 feet high and 30 yards wide, concrete machine-gun nests, and mortar batteries, supported further back by heavy artillery. Troops lived in holes in the ground, separated from each other by a “no-man’s land.”

The unexpected development of trench warfare baffled military leaders, who had been trained to fight wars of

MAP 25.3  The Eastern Front, 1914–1918. Russia made early gains but then was pushed far back into its own territory by the German army. After the Bolsheviks seized power, they negotiated the Treaty of Brest-Litovsk, which extracted Russia from the war at the cost of substantial Russian territory (see Map 25.4).

Q What is the approximate average distance between the farthest advances of Russia into Germany and the farthest advances of Germany into Russia?
movement and maneuver. But public outcries for action put them under heavy pressure. The only plan generals could devise was to attempt a breakthrough by throwing masses of men against enemy lines that had first been battered by artillery barrages. Once the decisive breakthrough had been achieved, they thought, they could then return to the war of movement that they knew best. Periodically, the high command on either side would order an offensive that would begin with an artillery barrage to flatten the enemy’s barbed wire and leave the enemy in a state of shock. After “softening up” the enemy in this fashion, a mass of soldiers would climb out of their trenches with fixed bayonets and try to work their way toward the enemy trenches. The attacks rarely worked; the machine gun put hordes of men advancing unprotected across open fields at a severe disadvantage. In 1916 and 1917, millions of young men were killed in the search for the elusive breakthrough. In the German offensive at Verdun (ver-DUN) in 1916, the British campaigns on the Somme (SUM) in 1916 and at Ypres (EE-preh) in 1917, and the French attack in Champagne in 1917, the senselessness of trench warfare became all too obvious. In ten months at Verdun, 700,000 men lost their lives over a few square miles of terrain.

DAILY LIFE IN THE TRENCHES  Warfare in the trenches of the Western Front produced unimaginable horrors (see the box on p. 786). Many participants commented on the cloud of confusion that covered the battlefields. When attacking soldiers entered “no-man’s land,” the noise, machine-gun fire, and exploding artillery shells often caused them to panic and lose their bearings; they went forward only because they were carried on by the momentum of the soldiers beside them. Rarely were battles as orderly as they were portrayed on military maps and in civilian newspapers.

Battlefields were hellish landscapes of barbed wire, shell holes, mud, and injured and dying men (see the Film & History feature on p. 787). The introduction of poison gas in 1915 produced new forms of injuries, as one British writer described:

I wish those people who write so glibly about this being a holy war could see a case of mustard gas... could see the poor things burnt and blistered all over with great mustard-colored suppurating blisters with blind eyes all sticky... and stuck together, and always fighting for breath, with voices a mere whisper, saying that their throats are closing and they know they will choke.6

Soldiers in the trenches also lived with the persistent presence of death. Since combat went on for months, they had to carry on in the midst of countless bodies of dead men or the remains of men dismembered by artillery barrages. Many soldiers remembered the stench of decomposing bodies and the swarms of rats that grew fat in the trenches.

Soldiers on the Western Front did not spend all of their time on the front line or in combat when they were on the front line. An infantryman spent one week out of every month in the front-line trenches, one week in the reserve lines, and the remaining two weeks somewhere behind the lines. Daily life in the trenches was predictable. Thirty minutes before sunrise, troops had to “stand to,” ready to repel any attack. If no attack was forthcoming that day, the day’s routine consisted of breakfast followed by inspection, sentry duty, restoration of the trenches, care of personal items, or whiling away the time as best they could. Soldiers often recalled the boredom of life in the dreary, lice-ridden, muddy or dusty trenches (see Images of Everyday Life on p. 788).

Impact of the Machine Gun.  Trench warfare on the Western Front stymied military leaders, who had expected to fight a war based on movement and maneuver. Their efforts to effect a breakthrough by sending masses of men against enemy lines were the height of folly in view of the brutal efficiency of the machine gun. This photograph shows a group of German soldiers in their machine-gun nest.
At many places along the opposing lines of trenches, a "live and let live" system evolved based on the realization that neither side was going to drive out the other anyway. The "live and let live" system resulted in arrangements such as not shelling the latrines or attacking during breakfast. Some parties even worked out agreements to make noise before lesser raids so that the opposing soldiers could retreat to their bunkers.

On both sides, troops produced their own humorous magazines to help pass the time and fulfill the need to laugh in the midst of the daily madness. The British trench magazine, the B.E.F. Times, devoted one of its issues to defining military terms. A typical definition was "DUDS—These are of two kinds. A shell on impact failing to explode is called a dud. They are unhappily not as plentiful as the other kind, which often draws a big salary and explodes for no reason. These are plentiful away from the fighting areas." Soldiers' songs also captured a mixture of the sentimental and the frivolous (see the box on p. 789).

The Widening of the War

As another response to the stalemate on the Western Front, both sides looked for new allies that might provide a winning advantage. The Ottoman Empire had already come into the war on Germany's side in the autumn of 1914. Russia, Great Britain, and France declared war on the Ottoman Empire in November. Although the forces of the British Empire attempted to open a Balkan front by landing forces at Gallipoli, southwest of Constantinople, in April 1915, the entry of Bulgaria into the war on the side of the Central Powers (as Germany, Austria-Hungary, and the Ottoman Empire were called) and a disastrous campaign at Gallipoli caused them to withdraw. The Italians, as we have seen, entered the war on the Allied side after France and Britain promised to further their acquisition of Austrian territory. In the long run, however, Italian military incompetence forced the Allies to come to the assistance of Italy.

A GLOBAL CONFLICT Because the major European powers controlled colonial empires in other parts of the world, the war in Europe soon became a world war. In the Middle East, the British officer T. E. Lawrence (1888–1935), who came to be known as Lawrence of Arabia, incited Arab princes to revolt against their Ottoman overlords in 1916. In 1918, British forces from Egypt and Mesopotamia destroyed the rest of the Ottoman Empire in the Middle East. For their Middle East campaigns, the British mobilized forces from India, Australia, and New Zealand.

The Allies also took advantage of Germany's preoccupation in Europe and lack of naval strength to seize German colonies in Africa. But there too the war did not end quickly. The first British shots of World War I were actually fired in Africa when British African troops moved into the German colony of Togoland near the end of August 1914. But in East Africa, the German commander Colonel Paul von Lettow-Vorbeck (POWL fun LEH-toh-FOR-bek) managed to keep his African troops fighting one campaign after another for four years; he did not surrender until two weeks after the armistice ended the war in Europe.

In the battles in Africa, Allied governments drew mainly on African soldiers, but some states, especially France, also recruited African troops to fight in Europe. The French drafted more than 170,000 West African soldiers, many of whom fought in the trenches on the Western Front. African troops were also used as occupation forces in the German Rhineland at the end of the war. About 80,000 Africans were killed or injured in Europe.
The Reality of War: Trench Warfare

The romantic illusions about the excitement and adventure of war that filled the minds of so many young men who marched off to battle (see the box on p. 781) quickly disintegrated after a short time in the trenches on the Western Front. This description of trench warfare is taken from the most famous novel that emerged from World War I, Erich Maria Remarque’s All Quiet on the Western Front, published in 1929. Remarque had fought in the trenches in France.

Erich Maria Remarque, All Quiet on the Western Front

We wake up in the middle of the night. The earth booms. Heavy fire is falling on us. We crouch into corners. We distinguish shells of every caliber.

Each man lays hold of his things and looks again every minute to reassure himself that they are still there. The dug-out heaves, the night roars and flashes. We look at each other in the momentary flashes of light, and with pale faces and pressed lips shake our heads.

Every man is aware of the heavy shells tearing down the parapet, rooting up the embankment and demolishing the upper layers of concrete. ... Already by morning a few of the recruits are green and vomiting. They are too inexperienced....

The bombardment does not diminish. It is falling in the rear too. As far as one can see it spouts fountains of light, and with pale faces and pressed lips shake our heads.

The attack does not come, but the bombardment continues. Slowly we become mute. Hardly a man speaks. We cannot make ourselves understood.

Our trench is almost gone. At many places it is only eighteen inches high, it is broken by holes, and craters, and mountains of earth. A shell lands square in front of our post. At once it is dark. We are buried and must dig ourselves out....

Towards morning, while it is still dark, there is some excitement. Through the entrance rushes in a swarm of fleeing rats that try to storm the walls. Torches light up the confusion. Everyone yells and curses and slaughters. The madness and despair of many hours unloads itself in this outburst. Faces are distorted, arms strike out, the beasts scream; we just stop in time to avoid attacking one another....

Suddenly it howls and flashes terrifically, the dug-out cracks in all its joints under a direct hit, fortunately only a light one that the concrete blocks are able to withstand. It rings metallically, the walls reel, rifles, helmets, earth, mud, and dust fly everywhere. Sulphur fumes pour in.... The recruit starts to rave again and two others follow suit. One jumps up and rushes out, we have trouble with the other two. I start after the one who escapes and wonder whether to shoot him in the leg—then it shrieks again, I fling myself down and when I stand up the wall of the trench is plastered with smoking splinters, lumps of flesh, and bits of uniform. I scramble back.

The first recruit seems actually to have gone insane. He butts his head against the wall like a goat. We must try tonight to take him to the rear. Meanwhile we bind him, but so that in case of attack he can be released.

Suddenly the nearer explosions cease. The shelling continues but it has lifted and falls behind us, our trench is free. We seize the hand-grenades, pitch them out in front of the dug-out and jump after them. The bombardment has stopped and a heavy barrage now falls behind us. The attack has come.

No one would believe that in this howling waste there could still be men; but steel helmets now appear on all sides out of the trench, and fifty yards from us a machine-gun is already in position and barking.

The wire-entanglements are torn to pieces. Yet they offer some obstacle. We see the storm-troops coming. Our artillery opens fire. Machine-guns rattle, rifles crack. The charge works its way across. Haie and Kropp begin with the hand-grenades. They throw as fast as they can, others pass them, the handles with the strings already pulled. Haie throws seventy-five yards, Kropp sixty, it has been measured, the distance is important. The enemy as they run cannot do much before they are within forty yards.

We recognize the distorted faces, the smooth helmets: they are French. They have already suffered heavily when they reach the remnants of the barbed-wire entanglements. A whole line has gone down before our machine-guns; then we have a lot of stoppages and they come nearer.

I see one of them, his face upturned, fall into a wire cradle. His body collapses, his hands remain suspended as though he were praying. Then his body drops clean away and only his hands with the stumps of his arms, shot off, now hang in the wire. ❙❑❑

Q What does this excerpt from Erich Maria Remarque reveal about the realities of trench warfare? Would the surviving front-line victims of the war have been able to describe or explain their experiences there to those left behind on the home front? What effect would that have on postwar European society?
where they were often at a distinct disadvantage due to the unfamiliar terrain and climate.

Hundreds of thousands of Africans were also used for labor, especially for carrying supplies and building roads and bridges. In East Africa, both sides drafted African laborers as carriers for their armies. More than 100,000 of these laborers died from disease and starvation caused by neglect.

The immediate impact of World War I in Africa was the extension of colonial rule since Germany’s African Filmmakers, History

Paths of Glory (1957)

Paths of Glory, directed by Stanley Kubrick, is a powerful antiwar film made in 1957 and based on the novel with the same name by Humphrey Cobb. Set in France in 1916, the film deals with the time during World War I when the Western Front had become bogged down in brutal trench warfare. The novel was based loosely on a true story of five French soldiers who were executed for mutiny. In the film, General George Broulard (Adolphe Menjou) of the French General Staff suggests to his subordinate, General Mireau (George Macready), that he launch what would amount to a suicidal attack on the well-defended Ant Hill. Mireau refuses until Broulard mentions the possibility of a promotion, at which point Mireau abruptly changes his mind and accepts the challenge. He walks through the trenches preparing his men with the stock question: “Hello there soldier, are you ready to kill more Germans?” Mireau persuades Colonel Dax (Kirk Douglas) to mount the attack, despite Dax’s protest that it will be a disaster. Dax proves to be right. None of the French soldiers reach the German lines, and one-third of the troops are not even able to leave their trenches because of enemy fire. To avoid blame for the failure, General Mireau accuses his men of cowardice, and three of them (one from each company, chosen in purely arbitrary fashion) are brought before a hastily arranged court-martial. Dax defends his men but to no avail. The decision has already been made, and the three men are shot in front of the assembled troops. As General Broulard cynically comments, “One way to maintain discipline is to shoot a man now and then.” After the execution, when General Broulard offers Dax a promotion, Dax responds, “Would you like me to suggest what you can do with that promotion?” Replies Broulard, “You’re an idealist; I pity you.” But Dax has the last word: “I pity you for not seeing the wrongs you have done.” The film ends with the troops being ordered back to the front.

The film realistically portrays the horrors of trench warfare in World War I—the senseless and suicidal attacks through no-man’s-land against well-entrenched machine-gun batteries. The film is also scathing in its portrayal of military leaders. The generals are shown drinking cognac in the palaces they requisitioned for their headquarters while the troops live in the mud and filth of the trenches. Both generals are portrayed as arrogant, ego-driven individuals who think nothing of the slaughter of their men in battle. The men condemned to die for cowardice are scapegoats sacrificed to cover up the mistakes of their superior officers who are determined to pursue “paths of glory” to advance themselves. The film’s portrayal of the military executions was not accurate, however. The French army did not choose individuals at random for punishment, although it did execute some soldiers on charges of cowardice, as did the armies of the other belligerents.

This realistic indictment of war and the military elites offended some countries. French authorities saw it as an insult to the honor of the army and did not allow it to be shown in France until 1975. The military regime of Francisco Franco in Spain also banned the film for its antimilitary content. Kubrick himself went on to make two other antiwar films, capturing the Vietnam War in Full Metal Jacket and the Cold War in Dr. Strangelove (see the Film & History feature on p. 933).
Life in the Trenches

The slaughter of millions of men in the trenches of World War I created unimaginable horrors for the participants. For the sake of survival, many soldiers learned to harden themselves against the stench of decomposing bodies and the sight of bodies horribly dismembered by artillery barrages, as is evident in the photograph at the top left. Life in the trenches could also be boring as soldiers whiled away the time as best they could when they were not fighting. Shown in the photograph at the top right is a group of German soldiers in their trench reading and writing letters during a lull in the fighting. The introduction of poison gas in 1915 led quickly to the use of protective gas masks. The bottom photograph shows Austrian soldiers in their trench demonstrating how to use the gas masks.
The Songs of World War I

On the march, in bars, in trains, and even in the trenches, the soldiers of World War I spent time singing. The songs sung by soldiers of different nationalities varied considerably. “The Watch on the Rhine,” a German favorite, focused on heroism and patriotism. British war songs often partook of black humor, as in “The Old Barbed Wire.” An American favorite was the rousing “Over There,” written by the professional songwriter George M. Cohan.

From “The Watch on the Rhine”

There sounds a call like thunder’s roar,  
Like the crash of swords, like the surge of waves.  
To the Rhine, the Rhine, the German Rhine!  
Who will the stream’s defender be?  
Dear Fatherland, rest quietly  
Sure stands and true the Watch,  
The Watch on the Rhine.

To heaven he gazes,  
Spirits of heroes look down.  
He vows with proud battle-desire:  
O Rhine! You will stay as German as my breast!  
Dear Fatherland, [etc.]

Even if my heart breaks in death,  
You will never be French.  
As you are rich in water  
Germany is rich in hero’s blood.  
Dear Fatherland, [etc.]

So long as a drop of blood still glows,  
So long a hand the dagger can draw,  
So long an arm the rifle can hold—  
Never will an enemy touch your shore.  
Dear Fatherland, [etc.]

From “The Old Barbed Wire”

If you want to find the old battalion,  
I know where they are,  
I know where they are.  
If you want to find a battalion,  
I know where they are,  
They’re hanging on the old barbed wire.  
I’ve seen ‘em, I’ve seen ‘em,

Hanging on the old barbed wire,  
I’ve seen ‘em,  
Hanging on the old barbed wire.

George M. Cohan, “Over There”

Over There  
Send the word  
Send the word  
Over There  
That the Yanks are coming  
The Yanks are coming,  
The drums rum-tuming everywhere.  
So prepare,  
Say a prayer  
Send the word  
Send the word  
To beware.  
We’ll be over.  
We’re coming over  
And we won’t come back  
Till it’s over  
Over There.

Johnnie get your gun  
Get your gun  
Get your gun  
Take it on the run  
On the run  
On the run  
Hear them calling you and me  
Every son of liberty  
Hurry right away  
No delay, go today  
Make your Daddy glad  
To have had such a lad  
Tell your sweetheart not to pine  
To be proud her boy’s in line.

Q

Based on their war songs, what ideas or themes do you think helped soldiers on all sides maintain the will to fight? How do you think the lyrics and performances of these songs worked to shape the psychology of the singers?

As one African who had fought for the French said, “We were not fighting for the French, we were fighting for ourselves [to become] French citizens.” Moreover, educated African elites, who had aided their colonial overlords in enlisting local peoples to fight, did so in the belief that they would be rewarded with citizenship and new political

colonies were simply transferred to the winning powers, especially the British and the French. But the war also had unintended consequences for the Europeans. African soldiers who had gone to war for the Allies, especially those who left Africa and fought in Europe, became politically aware and began to advocate political and social equality.
possibilities after the war. When their hopes were frustrated, they soon became involved in anticolonial movements (see Chapter 26).

In East Asia and the Pacific, Japan joined the Allies on August 23, 1914, primarily to seize control of German territories in Asia. As one Japanese statesman declared, the war in Europe was "divine aid...for the development of the destiny of Japan." The Japanese took possession of German territories in China, as well as the German-occupied islands in the Pacific. New Zealand and Australia quickly joined the Japanese in conquering the German-held parts of New Guinea.

ENTRY OF THE UNITED STATES The United States tried to remain neutral in the Great War but found it more difficult to do so as the war dragged on. Although there was considerable sentiment for the British side in the conflict, the immediate cause of American involvement grew out of the naval conflict between Germany and Great Britain. Only once did the German and British naval forces engage in direct combat—at the Battle of Jutland on May 31, 1916, when the Germans won an inconclusive victory.

Britain used its superior naval power to maximum effect, however, by imposing a naval blockade on Germany. Germany retaliated with a counterblockade enforced by the use of unrestricted submarine warfare. At the beginning of 1915, the German government declared the area around the British Isles a war zone and threatened to torpedo any ship caught in it. Strong American protests over the German sinking of passenger liners, especially the British ship Lusitania on May 7, 1915, when more than one hundred Americans lost their lives, forced the German government to modify its policy of unrestricted submarine warfare starting in September 1915 and to briefly suspend unrestricted submarine warfare a year later.

In January 1917, however, eager to break the deadlock in the war, the Germans decided on another military gamble by returning to unrestricted submarine warfare. German naval officers convinced Emperor William II that the use of unrestricted submarine warfare could starve the British into submission within five months. When the emperor expressed concern about the Americans, he was told not to worry. The Americans, the chief of the German Naval Staff said, were "disorganized and undisciplined."

The return to unrestricted submarine warfare brought the United States into the war on April 6, 1917. Although American troops did not arrive in Europe in large numbers until the following year, the entry of the United States into the war in 1917 gave the Allied Powers a psychological boost when they needed it. The year 1917 was not a good one for them. Allied offensives on the Western Front were disastrously defeated. The Italian armies were smashed in October, and in November, the Bolshevik Revolution in Russia led to Russia’s withdrawal from the war (see "The Russian Revolution" later in this chapter). The cause of the Central Powers looked favorable, although war weariness in the Ottoman Empire, Bulgaria, Austria-Hungary, and Germany was beginning to take its toll. The home front was rapidly becoming a cause for as much concern as the war front.

A New Kind of Warfare By the end of 1915, airplanes appeared on the battlefront. The planes were first used to spot the enemy’s position, but soon they began to attack ground targets, especially enemy communications. Fights for control of the air occurred and increased over time. At first, pilots fired at
growth of these needs. Most European countries had greater demands for men and matériel. The need to organize masses of men and matériel for years of combat (Germany alone had 5.5 million men in active units in 1916) led to increased centralization of government powers, economic regimentation, and manipulation of public opinion to keep the war effort going.

TOTAL WAR: POLITICAL CENTRALIZATION AND ECONOMIC REGIMENTATION As we have seen, the outbreak of World War I was greeted with a rush of patriotism; even socialists went enthusiastically into the fray. As the war dragged on, governments realized, however, that more than patriotism would be needed. Since the war was expected to be short, little thought had been given to economic problems and long-term wartime needs. Governments had to respond quickly, however, when the war machines failed to achieve their knockout blows and made ever-greater demands for men and matériel.

The extension of government power was a logical outgrowth of these needs. Most European countries had already devised some system of mass conscription or military draft. It was now carried to unprecedented heights as countries mobilized tens of millions of young men for that elusive breakthrough to victory. Even countries that traditionally relied on volunteers (Great Britain had the largest volunteer army in modern history—one million men—in 1914 and 1915) were forced to resort to conscription, especially to ensure that skilled workers did not enlist but remained in factories that were crucial to the production of munitions. In 1916, despite widespread resistance to this extension of government power, compulsory military service was introduced in Great Britain.

Throughout Europe, wartime governments expanded their powers over their economies. Free market capitalist systems were temporarily shelved as governments experimented with price, wage, and rent controls, the rationing of food supplies and materials, the regulation of imports and exports, and the nationalization of transportation systems and industries. Some governments even moved toward compulsory employment. In effect, to mobilize the entire resources of their nations for the war effort, European nations had moved toward planned economies directed by government agencies. Under total war mobilization, the distinction between soldiers at war and civilians at home was narrowed. In the view of political leaders, all citizens constituted a national army dedicated to victory. As the American president, Woodrow Wilson (1856–1924), expressed it, the men and women “who remain to till the soil and man the factories are no less a part of the army than the men beneath the battle flags.”

Not all European nations made the shift to total war equally well. Germany had the most success in developing a planned economy. At the beginning of the war, the government asked Walter Rathenau (VAHL-tuh RAH-tuhn), head of the German General Electric Company, to use his business methods to organize the War Raw Materials Board, which would allocate strategic raw materials to produce the goods that were most needed. Rathenau made it possible for the German war machine to be effectively supplied. The Germans were much less successful with the rationing of food, however. Even before the war, Germany had to import about 20 percent of its food supply. The British blockade of Germany and a decline in farm labor made food shortages inevitable. Daily food rations in Germany were cut from 1,350 calories in 1916 to 1,000 by 1917, barely adequate for survival. As a result of a poor potato harvest in the winter of 1916–1917, turnips became the basic staple for the poor. An estimated 750,000 German civilians died of hunger during World War I.

The German war government was eventually consolidated under military authority. The two popular military heroes of the war, General Paul von Hindenburg, chief of the General Staff, and Erich Ludendorff, deputy chief of staff, came to control the government by 1916 and virtually became the military dictators of Germany. In 1916,
Hindenburg and Ludendorff decreed a system of complete mobilization for total war. In the Auxiliary Service Law of December 2, 1916, they required all male noncombatants between the ages of seventeen and sixty to work only in jobs deemed crucial to the war effort.

Germany, of course, had an authoritarian political system before the war began. France and Britain did not, but even in those countries, the power of the central government was dramatically increased. At first, Great Britain tried to fight the war by continuing its liberal tradition of limited government interference in the economy. The pressure of circumstances, however, forced the British government to take a more active role in economic matters. The need to ensure adequate production of munitions led to the creation in July 1915 of the Ministry of Munitions under a dynamic leader, David Lloyd George. The Ministry of Munitions took numerous steps to ensure that private industry would produce war matériel at limited profits. It developed a vast bureaucracy of 65,000 clerks to oversee munitions plants. Beginning in 1915, it was given the power to take over plants manufacturing war goods that did not cooperate with the government. The British government also rationed food supplies and imposed rent controls.

The French were less successful than the British and Germans in establishing a strong war government during much of the war. For one thing, the French faced a difficult obstacle in organizing a total war economy. German occupation of northeastern France cost the nation 75 percent of its coal production and almost 80 percent of its steelmaking capacity. Then, too, the relationship between civil and military authorities in France was extraordinarily strained. For the first three years of the war, military and civil authorities struggled over who would oversee the conduct of the war. Not until the end of 1917 did the French war government find a strong leader in Georges Clemenceau (ZHORZH kluh-mahn-SOH) (1841–1929). Declaring that “war is too important to be left to generals,” Clemenceau established clear civilian control of a total war government.

The three other major belligerents—Russia, Austria-Hungary, and Italy—had much less success than Britain, Germany, and France in mobilizing for total war. The autocratic empires of Russia and Austria-Hungary had backward economies that proved incapable of turning out the quantity of war matériel needed to fight a modern war. The Russians, for example, conscripted millions of men but could arm only one-fourth of them. Unarmed Russian soldiers were sent into battle anyway and told to pick up rifles from their dead colleagues. With their numerous minorities, both the Russian and Austro-Hungarian empires found it difficult to achieve the kind of internal cohesion needed to fight a prolonged total war. Italy, too, lacked both the public enthusiasm and the industrial resources needed to wage a successful total war.

**PUBLIC ORDER AND PUBLIC OPINION** As the Great War dragged on and both casualties and privations worsened, internal dissatisfaction replaced the patriotic enthusiasm that had marked the early stages of the war. By 1916, there were numerous signs that civilian morale was beginning to crack under the pressure of total war.

The first two years of the war witnessed only a few scattered strikes, but thereafter strike activity increased dramatically. In 1916, 50,000 German workers carried out a three-day work stoppage in Berlin to protest the arrest of a radical socialist leader. In France and Britain, the number of strikes increased significantly. Even worse was the violence that erupted in Ireland when members of the Irish Republican Brotherhood and Citizens Army occupied government buildings in Dublin on Easter Sunday (April 24) in 1916. British forces crushed the Easter Rebellion and then condemned its leaders to death.

Internal opposition to the war came from two major sources in 1916 and 1917, liberals and socialists. Liberals in both Germany and Britain sponsored peace resolutions calling for a negotiated peace without any territorial acquisitions. They were largely ignored. Socialists in
Germany and Austria also called for negotiated settlements. By 1917, war morale had so deteriorated that more dramatic protests took place. Mutinies in the Italian and French armies were put down with difficulty. Czech leaders in the Austrian Empire openly called for an independent democratic Czech state. In April 1917, some 200,000 workers in Berlin went out on strike for a week to protest the reduction of bread rations. Only the threat of military force and prison brought them back to their jobs. Despite the strains, all of the belligerent countries except Russia survived the stresses of 1917 and fought on.

War governments also fought back against the growing opposition to the war. Authoritarian regimes, such as those of Germany, Russia, and Austria-Hungary, had always relied on force to subdue their populations. Under the pressures of the war, however, even parliamentary regimes resorted to an expansion of police powers to stifle internal dissent. At the very beginning of the war, the British Parliament passed the Defence of the Realm Act, which allowed the public authorities to arrest dissenters as traitors. The act was later extended to authorize public officials to censor newspapers by deleting objectionable material and even to suspend newspaper publication. In France, government authorities had initially been lenient about public opposition to the war. But by 1917, they began to fear that open opposition to the war might weaken the French will to fight. When Georges Clemenceau became premier near the end of 1917, the lenient French policies came to an end, and basic civil liberties were suppressed for the duration of the war. The editor of an antiauthoritarian newspaper was even executed on a charge of treason.

Wartime governments made active use of propaganda to arouse enthusiasm for the war. At the beginning, public officials needed to do little to achieve this goal. The British and French, for example, exaggerated German atrocities in Belgium and found that their citizens were only too willing to believe these accounts. But as the war dragged on and morale sagged, governments were forced to devise new techniques to stimulate declining enthusiasm. In one British recruiting poster, for example, a small daughter asked her father, “Daddy, what did you do in the Great War?” while her younger brother played with toy soldiers and cannons.

**THE SOCIAL IMPACT OF TOTAL WAR**

Total war made a significant impact on European society, most visibly by bringing an end to unemployment. The withdrawal of millions of men from the labor market to fight, combined with the heightened demand for wartime products, led to jobs for everyone able to work.

The cause of labor also benefited from the war. The enthusiastic patriotism of workers was soon rewarded with a greater acceptance of trade unions. To ensure that labor problems would not disrupt production, war governments in Britain, France, and Germany not only sought union cooperation but also for the first time allowed trade unions to participate in making important government decisions on labor matters. In return, unions cooperated on wage limits and production schedules. Labor gained two benefits from this cooperation: it opened the way to the collective bargaining practices that became more widespread after World War I and increased the prestige of trade unions, enabling them to attract more members.

World War I also created new roles for women. With so many men off fighting at the front, women were called on to take over jobs and responsibilities that had not been open to them before. These included certain clerical jobs that only small numbers of women had held earlier. In Britain, for example, the number of women who worked in banking rose from 9,500 to almost 64,000 in the course of the war, while the number of women in commerce rose from a half million to almost one million. Overall, 1,345,000 women in Britain obtained new jobs or replaced men during the war. Women were also now employed in jobs that had been considered “beyond the capacity of women.” These included such occupations as chimney sweeps, truck drivers, farm laborers, and,
above all, factory workers in heavy industry (see the box on p. 795). In France, 684,000 women worked in armaments plants for the first time; in Britain, the figure was 920,000. Thirty-eight percent of the workers in the Krupp (KROOP) armaments works in Germany in 1918 were women.

Male resistance, however, often made it difficult for women to enter these new jobs, especially in heavy industry. One Englishwoman who worked in a munitions factory recalled her experience: "I could quite see it was hard on the men to have women coming into all their pet jobs and in some cases doing them a good deal better. I sympathized with the way they were torn between not wanting the women to undercut them, and yet hating them to earn as much."10 While male workers expressed concern that the employment of females at lower wages would depress their own wages, women began to demand equal-pay legislation. The French government passed a law in July 1915 that established a minimum wage for women homeworkers in textiles, an industry that had grown dramatically because of the need for military uniforms. In 1917, the government decreed that men and women should receive equal rates for piecework. Despite the noticeable increase in women's wages that resulted from government regulations, women's industrial wages still were not equal to men's wages at the end of the war.

Even worse, women had achieved little real security about their place in the workforce. Both men and women seemed to think that many of the new jobs for women were only temporary, an expectation quite evident in the British poem "War Girls," written in 1916:

There's the girl who clips your ticket for the train,  
And the girl who speeds the lift from floor to floor,  
There's the girl who does a milk-round in the rain,  
And the girl who calls for orders at your door.  
Strong, sensible, and fit,  
They're out to show their grit,  
And tackle jobs with energy and knack.  
No longer caged and penned up,  
They're going to keep their end up  
Till the khaki soldier boys come marching back.11

At the end of the war, governments moved quickly to remove women from the jobs they had encouraged them to take earlier. By 1919, there were 650,000 unemployed women in Britain, and wages for women who were still employed were also lowered. The work benefits for women from World War I seemed to be short-lived.

Nevertheless, in some countries, the role played by women in the wartime economies did have a positive impact on the women's movement for social and political
Women in the Factories

During World War I, women were called on to assume new job responsibilities, including factory work. In this selection, Naomi Loughnan, a young, upper-middle-class woman, describes the experiences in a munitions plant that considerably broadened her perspective on life.

Naomi Loughnan, “Munition Work”

We little thought when we first put on our overalls and caps and enlisted in the Munition Army how much more inspiring our life was to be than we had dared to hope. Though we munition workers sacrifice our ease we gain a life worth living. Our long days are filled with interest, and with the zest of doing work for our country in the grand cause of Freedom. As we handle the weapons of war we are learning great lessons of life. In the busy, noisy workshops we come face to face with every kind of class, and each one of these classes has something to learn from the others.

Engineering mankind is possessed of the unshakable opinion that no woman can have the mechanical sense. If one of us asks humbly why such and such an alteration is not made to prevent this or that drawback to a machine, she is told, with a superior smile, that a man has worked her machine before her for years, and that therefore if there were any improvement possible it would have been made. As long as we do exactly what we are told and do not attempt to use our brains, we give entire satisfaction, and are treated as nice, good children. Any swerving from the easy path prepared for us by our males arouses the most scathing contempt in their manly bosoms. ... Women have, however, proved that their entry into the munition world has increased the output. Employers who forget things personal in their patriotic desire for large results are enthusiastic over the success of women in the shops. But their workmen have to be handled with the utmost tenderness and caution lest they should actually imagine it was being suggested that women could do their work equally well, given equal conditions of training—at least where muscle is not the driving force. ... The coming of the mixed classes of women into the factory is slowly but surely having an educative effect upon the men. “Language” is almost unconsciously becoming subdued. There are fiery exceptions who make our hair stand up on end under our close-fitting caps, but a sharp rebuke or a look of horror will often straighten out the most savage. ... It is grievous to hear the girls also swearing and using disgusting language. Shoulder to shoulder with the children of the slums, the upper classes are having their eyes opened at last to the awful conditions among which their sisters have dwelt. Foul language, immorality, and many other evils are but the natural outcome of overcrowding and bitter poverty. ... Sometimes disgust will overcome us, but we are learning with painful clarity that the fault is not theirs whose actions disgust us, but must be placed to the discredit of those other classes who have allowed the continued existence of conditions which generate the things from which we shrink appalled. 

Q. What did Naomi Loughnan learn about men and lower-class women while working in the munitions factory? What did she learn about herself? What can one conclude about the effects of total war on European women?
War and the Family

John Mott was a captain in the British army. He came from an aristocratic family with a strong military tradition. He married Muriel Backhouse in 1907, and they had three sons before he was called up for service in World War I. These excerpts are taken from four of Mott’s letters to his wife and a letter informing her of her husband’s death during the Gallipoli campaign. The human experience of World War I was made up of millions of stories like that of John Mott and his family.

One Family’s War

1 July [1915]

My darling Childie,

I hope you got home safely. I have been promised that I shall know the ship we go on tomorrow. But it will be no good writing to Gibraltar as we should get there before the letter. Try Malta as that goes over land. If you get overdrawn go and see Cox. Goodbye Darling. Don’t worry I shall come back alright.

Your devoted husband
John F. Mott

13 July

Mediterranean field force, Mudros

My darling Childie,

This island is very hot indeed but beastly windy. We have absolutely no news from the Front. Troops are pouring out now and I expect we shall be in it next week.

We have all gone through our little bout of diarrhoea. I was not too bad and only had pains in my stomach otherwise I am very well indeed.

Everyone is standing the heat very well. The Brigadier has a tent but everybody else is out in the blazing sun.

31 July

My darling Childie,

I got more letters from you today dated 5th, 6th, 7th. I had no idea till I read the letter that they could do all that about wris. I would never have left things in such a muddle, I only hope you can get straight.

Yesterday I left here at 5:30 am to go to the trenches with the Brigadier. We had an awful day, and I am not at all keen to go into that lot at all events. We sailed over in a trawler and had a long walk in the open under shrapnel fire. It was not very pleasant. Then we got to the communications trenches and had a mile and a half of them to go up. When we got to the fire trenches the stink was awful. Arms and legs of Turks sticking out of the trench parapets and lying dead all round. In one place the bottom of the trench was made up by dead Turks, but this has been abandoned as the place was too poisonous.

Our battle ships have been shelling very heavily so there may be an attack on. I must write to my mother tonight. All my love and kisses for ever.

Your loving husband
John F. Mott

6 August

My darling Childie,

We are off today just as we stand up, with four days rations. I can’t say where we are going but we shall see spots. I shall not get a chance to write again for a bit as we shall be on the move. I expect you have got a map of the place by now and perhaps you will hear where we have gone.

Very good to get away. All my love and kisses for ever.

Your loving husband
John F. Mott

Best love to all kids and baby

Pte A Thompson
6 Batt Y and L Red Cross Hospital

We landed on the 6th of Aug and took 2 hills and at daybreak on the 7th advanced across an open plain to the left of Salt Lake and got an awful shelling. We came to a small hill which was flat on top and I was about 2 hundred yards further on where the Capt was hit. They gave us it worse than ever when we got on there and I might have been happen 50 yds away when I saw the Capt and about 5 men fall badly hit. I could not say whether it was shrapnel or common shell but I think it was most probably shrapnel as they use that mostly. It was that thick that no one could get to the Capt at the time and I don’t think he lived very long, well he could not the way they were hit and was afterwards buried when things had quietened down in the evening and a cross was put on his grave with an inscription and he got as good a burial as could be given out there. Well I think I have told you all I know about Capt Mott. I only wish I could have given you better news, so I will close with Kind Regards.

Yours Obediently,

Pte Thompson

What do these letters tell you about the ordinary officer’s perspective on the war? How great do you think the gulf was between front line and home front? What does the tone of Private Thompson’s final letter suggest about the ordinary soldier’s experience of battle and the effects of such service on fighting men?

misguided, however. The Great War did not eliminate the class conflict that had characterized pre-1914 Europe, and this became increasingly apparent as the war dragged on.

The economic impact of the war was felt unevenly. One group of people who especially benefited were the owners of large industries manufacturing the weapons of war. Despite public outrage, governments rarely limited the enormous profits made by the industrial barons. In fact, in the name of efficiency, wartime governments tended to favor large industries when scarce raw materials were allocated.
Small firms considered less essential to the war effort even had to shut down because of a lack of resources.

Inflation also caused inequities. The combination of full employment and high demand for scarce consumer goods caused prices to climb. Many skilled workers were able to earn wages that enabled them to keep up with inflation, but this was not true for unskilled workers or those in nonessential industries. Only in Great Britain did the wages of workers outstrip prices. Everywhere else in Europe, people experienced a loss of purchasing power.

Many middle-class people were hit especially hard by inflation. They included both those who lived on fixed incomes, such as retired people on pensions, and professional people, such as clerks, lesser civil servants, teachers, small shopkeepers, and members of the clergy, whose incomes remained stable at a time when prices were rising. By the end of the war, many of these people were actually doing less well economically than skilled workers. Their discontent would find expression after the war.

War and Revolution

**FOCUS QUESTION:** What were the causes of the Russian Revolution of 1917, and why did the Bolsheviks prevail in Russia?

By 1917, total war was creating serious domestic turmoil in all of the European belligerent states. Most countries were able to prop up their regimes and convince their people to continue the war for another year, but others were coming close to collapse. In Austria, for example, a government minister warned that “if the monarchs of the Central Powers cannot make peace in the coming months, it will be made for them by their peoples.” Russia, however, was the only belligerent that actually experienced the kind of complete collapse in 1917 that others were predicting might happen throughout Europe. Out of Russia’s collapse came the Russian Revolution, whose impact would be widely felt in Europe for decades to come.

The Russian Revolution

After the Revolution of 1905 had failed to bring any substantial changes to Russia, Tsar Nicholas II relied on the army and bureaucracy to uphold his regime. But World War I magnified Russia’s problems and severely challenged the tsarist government. The tsar, possessed of a strong sense of moral duty to his country, was the only European monarch to take personal charge of the armed forces, despite a lack of training for such an awesome responsibility. Russian industry was unable to produce the weapons needed for the army. Ill-led and ill-armed, Russian armies suffered incredible losses. Between 1914 and 1916, 2 million soldiers were killed while another 4 to 6 million were wounded or captured.

The tsarist government was unprepared for the tasks that it faced in 1914. The surge of patriotic enthusiasm that greeted the outbreak of war was soon dissipated by a government that distrusted its own people. Although the middle classes and liberal aristocrats still hoped for a constitutional monarchy, they were sullen over the tsar’s revocation of the political concessions made during the Revolution of 1905. Peasant discontent flourished as conditions worsened. The concentration of Russian industry in a few large cities made workers’ frustrations all the more evident and dangerous. In the meantime, Nicholas was increasingly insulated from events by his wife, Alexandra.

This German-born princess was a well-educated woman who had fallen under the influence of Rasputin (rass-PYOO-tin), a Siberian peasant whom the tsarina regarded as a holy man because he alone seemed able to stop the bleeding of her hemophiliac son, Alexis. Rasputin’s influence made him a power behind the throne, and he did not hesitate to interfere in government affairs. As the leadership at the top experienced a series of military and economic disasters, the middle class, aristocrats, peasants, soldiers, and workers grew more and more disenchanted with the tsarist regime. Even conservative aristocrats who supported the monarchy felt the need to do something to reverse the deteriorating situation. For a start, they assassinated Rasputin in December 1916. By then it was too late to save the monarchy, and its fall came quickly in the first weeks of March 1917.

**THE MARCH REVOLUTION** At the beginning of March, a series of strikes broke out in the capital city of Petrograd (formerly Saint Petersburg). Here the actions of working-class women helped change the course of Russian history. Weeks earlier, the government had introduced bread rationing in the city after the price of bread skyrocketed. Many of the women who stood in the lines waiting for bread were also factory workers who put in twelve-hour days. The number of women working in Petrograd factories had doubled since 1914. The Russian government had become aware of the volatile situation in the capital from police reports, one of which stated:

Mothers of families, exhausted by endless standing in line at stores, distraught over their half-starving and sick children, are today perhaps closer to revolution than [the liberal opposition leaders] and of course they are a great deal more dangerous because they are the combustible material for which only a single spark is needed to burst into flame.13

On March 8, a day celebrated since 1910 as International Women’s Day, about ten thousand women marched through Petrograd shouting “Peace and bread” and “Down with autocracy.” Soon the women were joined by other workers, and together they called for a general strike that succeeded in shutting down all the factories in the city on March 10. The tsarina wrote to Nicholas at the battlefront that “this is a hooligan movement. If the weather were very cold they would all probably stay at home.” Believing his wife, Nicholas told his military commanders, “I command you tomorrow to stop the disorders in the capital, which are unacceptable in the difficult time of war with
Germany and Austria.\textsuperscript{14} The troops were ordered to disperse the crowds, shooting them if necessary. Initially, the troops cooperated, but soon significant numbers of the soldiers joined the demonstrators. The situation was now out of the tsar's control. The Duma, or legislature, which the tsar had tried to dissolve, met anyway and on March 12 declared that it was assuming governmental responsibility. It established a provisional government on March 15; the tsar abdicated the same day.

In just one week, the tsarist regime had fallen apart. Although no particular group had been responsible for the outburst, the moderate Constitutional Democrats were responsible for establishing the provisional government. They represented primarily a middle-class and liberal aristocratic minority. Their program consisted of a liberal agenda that included working toward a parliamentary democracy and passing reforms that provided universal suffrage, civil equality, and an eight-hour workday.

The provisional government also faced another authority, the soviets, or councils of workers' and soldiers' deputies. The soviet of Petrograd had been formed in March 1917; around the same time, soviets sprang up spontaneously in army units and towns. The soviets represented the more radical interests of the lower classes and were largely composed of socialists of various kinds. Among them was the Marxist Social Democratic Party, which had formed in 1898 but divided in 1903 into two factions known as the Mensheviks (MENS-shuh-viks) and the Bolsheviks (BOHL-shuh-viks). The Mensheviks wanted the Social Democrats to be a mass electoral socialist party based on a Western model. Like the Social Democrats of Germany, they were willing to cooperate temporarily in a parliamentary democracy while working toward the ultimate achievement of a socialist state.

The Bolsheviks were a small faction of Russian Social Democrats who had come under the leadership of Vladimir Ulianov, known to the world as V. I. Lenin (1870–1924). Born in 1870, Lenin received a legal education and became a lawyer. In 1887, he turned into a dedicated enemy of tsarist Russia when his older brother was executed for planning to assassinate the tsar. Lenin's search for a revolutionary faith led him to Marxism, and in 1894 he moved to Saint Petersburg, where he helped organize an illegal group known as the Union for the Liberation of the Working Class. Arrested for this activity, Lenin was shipped to Siberia. After his release, he chose to go into exile in Switzerland and eventually assumed the leadership of the Bolshevik wing of the Russian Social Democratic Party.

Under Lenin's direction, the Bolsheviks became a party dedicated to a violent revolution that would destroy the capitalist system. He believed that a "vanguard" of activists must form a small party of well-disciplined professional revolutionaries to accomplish the task. Between 1900 and 1917, Lenin spent most of his time in Switzerland. The outbreak of war in 1914 gave him hope that all of Europe was ripe for revolution, and when the provisional government was formed in March 1917, he believed that an opportunity for the Bolsheviks to seize power in Russia had come. A few weeks later, with the connivance of the German High Command, who hoped to
create disorder in Russia, Lenin, his wife, and a small group of his followers were shipped to Russia in a “sealed train” by way of Finland.

Lenin’s arrival in Russia on April 3 opened a new stage in the Russian Revolution. In his “April Theses,” issued on April 20, Lenin presented a blueprint for revolutionary action based on his own version of Marxist theory. According to Lenin, it was not necessary for Russia to experience a bourgeois revolution before it could move toward socialism, as orthodox Marxists had argued. Instead, Russia could move directly into socialism. In the April Theses, Lenin maintained that the soviets of soldiers, workers, and peasants were ready-made instruments of power. The Bolsheviks must work toward gaining control of these groups and then use them to overthrow the provisional government. At the same time, the Bolsheviks articulated the discontent and aspirations of the people, promising an end to the war, the redistribution of all land to the peasants, the transfer of factories and industries from capitalists to committees of workers, and the relegation of government power from the provisional government to the soviets. Three simple slogans summed up the Bolshevik program: “Peace, land, bread,” “Worker control of production,” and “All power to the soviets.”

In late spring and early summer, while the Bolsheviks set about winning over the masses to their program and gaining a majority in the Petrograd and Moscow soviets, the provisional government struggled to gain control of Russia against almost overwhelming obstacles. Peasants began land reform by seizing property on their own in March. The military situation was also deteriorating. The Petrograd soviet had issued its Army Order No. 1 in March to all Russian military forces, encouraging them to remove their officers and replace them with committees composed of “the elected representatives of the lower ranks” of the army. Army Order No. 1 led to the collapse of all discipline and created military chaos. When the provisional government attempted to initiate a new military offensive in July, the army simply dissolved as masses of peasant soldiers turned their backs on their officers and returned home to join their families in seizing land.

THE BOLSHEVIK REVOLUTION In July 1917, Lenin and the Bolsheviks were falsely accused of inciting an attempt to overthrow the provisional government, and Lenin was forced to flee to Finland. But the days of the provisional government were numbered. In July 1917, Alexander Kerensky (kuh-REN-skee), a moderate socialist, had become prime minister in the provisional government. In September, when General Lavr Kornilov (LAH-vur kor-NYEE-luff) attempted to march on Petrograd and seize power, Kerensky released Bolsheviks from prison and turned to the Petrograd soviet for help. Although General Kornilov’s forces never reached Petrograd, Kerensky’s action had strengthened the hands of the Petrograd soviet and had shown Lenin how weak the provisional government really was.

By the end of October, the Bolsheviks had achieved a slight majority in the Petrograd and Moscow soviets. The number of party members had also grown from 50,000 to 240,000. Reports of unrest abroad had convinced Lenin that “we are on the threshold of a world proletarian revolution,” and he tried to persuade his fellow Bolsheviks that
the time was ripe for the overthrow of the provisional government. Although he faced formidable opposition within the Bolshevik ranks, he managed to gain support for his policy. With Leon Trotsky (TRAHT-skee) (1877–1940), a fervid revolutionary, as chairman of the Petrograd soviet, the Bolsheviks were in a position to seize power in the name of the soviets. During the night of November 6, pro-soviet and pro-Bolshevik forces took control of Petrograd under the immensely popular slogan “All power to the soviets.” The provisional government quickly collapsed with little bloodshed. The following night, the all-Russian Congress of Soviets, representing local soviets from all over the country, affirmed the transfer of power. At the second session, on the night of November 8, Lenin announced the new Soviet government, the Council of People’s Commissars, with himself as its head.

One immediate problem the Bolsheviks faced was the Constituent Assembly, which had been initiated by the provisional government and was scheduled to meet in January 1918. Elections to the assembly by universal suffrage had resulted in a defeat for the Bolsheviks, who had only 225 delegates compared to the 420 garnered by the Socialist Revolutionaries. But no matter. Lenin simply broke the Constituent Assembly by force. “To hand over power,” he said, “to the Constituent Assembly would again be compromising with malignant bourgeoisie” (see the box on p. 801).

But the Bolsheviks (soon renamed the Communists) still had a long way to go. Lenin, ever the opportunist, realized the importance of winning mass support as quickly as possible by fulfilling Bolshevik promises. In his first law, issued on the new regime’s first day in power, Lenin declared the land nationalized and turned it over to local rural land committees. In effect, this action merely ratified the peasants’ seizure of the land and assured the Bolsheviks of peasant support, especially against any attempt by the old landlords to restore their power. Lenin also met the demands of urban workers by turning over control of the factories to committees of workers. To Lenin, however, this was merely a temporary expedient.

The new government also introduced a number of social changes. Alexandra Kollontai (kul-lun-TY) (1872–1952), who had become a supporter of revolutionary socialism while in exile in Switzerland, took the lead in pushing a Bolshevik program for women’s rights and social welfare reforms. As minister of social welfare, she tried to provide health care for women and children by establishing “palaces for the protection of maternity and children.” Between 1918 and 1920, the new regime enacted a series of reforms that made marriage a civil act, legalized divorce, decreed the equality of men and women, and permitted abortions. Kollontai was also instrumental in establishing a women’s bureau, known as Zhenotdel (zhen-ut-DELL), within the Communist Party. This bureau sent men and women to all parts of the Russian Empire to explain the new social order. Members of Zhenotdel were especially eager to help women with matters of divorce and women’s rights. In the eastern provinces, several Zhenotdel members were brutally murdered by angry males who objected to any kind of liberation for their wives and daughters. Much to Kollontai’s disappointment, many of these Communist social reforms were later undone as the Communists came to face more pressing matters, including the survival of the new regime.

Lenin had also promised peace, and that, he realized, was not an easy task because of the humiliating losses of Russian territory that it would entail. There was no real choice, however. On March 3, 1918, the new Communist government signed the Treaty of Brest-Litovsk (BREST-li-TUFFSK) with Germany and gave up eastern Poland, Ukraine, Finland, and the Baltic provinces. To his critics, Lenin argued that it made no difference since the spread of socialist revolution throughout Europe would make the treaty largely irrelevant. In any case, he had promised peace to the Russian people, but real peace did not occur, for the country soon lapsed into civil war.

**CIVIL WAR** There was great opposition to the new Bolshevik regime, not only from groups loyal to the tsar but also from bourgeois and aristocratic liberals and anti-Leninist socialists, including Mensheviks and Socialist Revolutionaries. In addition, thousands of Allied troops were eventually sent to different parts of Russia in the hope of bringing Russia back into the Great War.

Between 1918 and 1921, the Bolshevik (Red) Army was forced to fight on many fronts (see Map 25.4). The first serious threat to the Bolsheviks came from Siberia, where a White (anti-Bolshevik) force under Admiral Alexander Kolchak (kul-CHAHK) pushed westward and advanced almost to the Volga River before being stopped. Attacks also came from the Ukrainians in the southeast and from the Baltic regions. In mid-1919, White forces under General Anton Denikin (ahn-TOHN dyin-YEE-kin), probably the most effective of the White generals, swept through Ukraine and advanced almost to Moscow. At one point in late 1919, three separate White armies seemed to be closing in on the Bolsheviks but were eventually pushed back. By 1920, the major White forces had been defeated, and Ukraine was retaken. The next year, the Communist regime regained control over the independent nationalist governments in the Caucasus: Georgia, Russian Armenia, and Azerbaijan.

The royal family was yet another victim of the civil war. After the tsar had abdicated, he, his wife, and their five children had been taken into custody. They were moved in August 1917 to Tobolsk in Siberia and in April 1918 to Ekaterinburg (i-kat-tuh-RIN-burk), a mining town in the Urals. On the night of July 16, members of the local soviet murdered the tsar and his family and burned their bodies in a nearby mine shaft.

How had Lenin and the Bolsheviks triumphed over what seemed at one time to be overwhelming forces? For one thing, the Red Army became a well-disciplined and formidable fighting force, thanks largely to the organizational genius of Leon Trotsky. As commissar of war, Trotsky reinstated the draft and even recruited and gave commands to former tsarist army officers. Trotsky insisted...
Soldier and Peasant Voices

In 1917, Russia experienced a cataclysmic upheaval as two revolutions overthrew the tsarist regime and then the provisional government that replaced it. Peasants, workers, and soldiers poured out their thoughts and feelings on these events, some of them denouncing the Bolsheviks for betraying their socialist revolution. These selections are taken from two letters, the first from a soldier and the second from a peasant. Both are addressed to Bolshevik leaders.

Letter from a Soldier in Leningrad to Lenin, January 6, 1918

Bastard! What the hell are you doing? How long are you going to keep on degrading the Russian people? After all, it’s because of you they killed the former minister . . . and so many other innocent victims. Because of you, they might kill even other former ministers belonging to the [Socialist Revolutionary] party because you call them counterrevolutionaries and even monarchists. . . . And you, you Bolshevik gang leader hired either by Nicholas II or by Wilhelm II, are waging this pogrom propaganda against men who may have done time with you in exile.

Scoundrel! A curse on you from the politically conscious Russian proletariat, the conscious ones and not the kind who are following you—that is, the Red Guards, the tally clerks, who, when they are called to military service, all hide at the factories and now are killing . . . practically their own father, the way the soldiers did in 1905 when they killed their own, or the way the police and gendarmes did in [1917]. That’s who they’re more like. They’re not pursuing the ideas of socialism because they don’t understand them (if they did they wouldn’t act this way) but because they get paid a good salary both at the factory and in the Red Guards. But not all the workers are like that—there are very politically aware ones and the soldiers—again not all of them—are like that but only former policemen, constables, gendarmes and the very very ignorant ones who under the old regime tramped with hay on one foot and straw on the other because they couldn’t tell their right foot from their left and they are pursuing not the ideas of socialism that you advocate but to be able to lie on their cots in the barracks and do absolutely nothing not even be asked to sweep the floor, which is already piled with several inches of filth. And so the entire proletariat of Russia is following you, by count fewer than are against you, but they are only physically or rather technically stronger than the majority, and that is what you’re abusing when you disbanded the Constituent Assembly the way Nicholas II disbanded the Duma.

You point out that counterrevolutionaries gathered there. You lie, scoundrel, there wasn’t a single counterrevolutionary and if there was then it was you, the Bolsheviks, which you proved by your actions when you encroached on the gains of the revolution: you are shutting down newspapers, even socialist ones, arresting socialists, committing violence and deceiving the people; you promised loads but did none of it.

Letter from a Peasant to the Bolshevik Leaders, January 10, 1918

TO YOU!

Rulers, plunderers, rapists, destroyers, usurpers, oppressors of Mother Russia, citizens Lenin, Trotsky, Uritsky, Zinoviev, Spiridonova, Antonov, Lunacharsky, Krylenko, and Co. [leaders of the Bolshevik party]:

Allow me to ask you how long you are going to go on degrading Russia’s millions, its tormented and exhausted people. Instead of peace, you signed an armistice with the enemy, and this gave our opponent a painful advantage, and you declared war on Russia. You moved the troops you had tricked to the Russian-Russian front and started a fratricidal war. Your mercenary Red Guards are looting, murdering, and raping everywhere they go. A fire has consumed all our dear Mother Russia. Rail transport is idle, as are the plants and factories; the entire population has woken up to find itself in the most pathetic situation, without bread or kerosene or any of the other essentials, unclothed and unshod in unheated houses. In short: hungry and cold. . . . You have strangled the entire press, and freedom with it, you have wiped out the best freedom fighters, you have destroyed all Russia. Think it over, you butchers, you hirelings of the Kaiser [William II]. Isn’t your turn about up, too? For all you are doing, we, politically aware Great Russians, are sending you butchers, you hirelings of the Kaiser, our curse. May you be damned, you accused one, you bloodthirsty butchers, you hirelings of the Kaiser—don’t think you’re in the clear, because the Russian people will sober up and that will be the end of you. I’m writing in red ink to show that you are bloodthirsty . . . . I’m writing these curses, a Great Russian native of Orel Province, peasant of Mtsensk Uezd.

Q What arguments do the writers of these letters use against Lenin and the Bolsheviks? Why do they feel so betrayed by the Bolsheviks?
on rigid discipline; soldiers who deserted or refused to obey orders were summarily executed. The Red Army also had the advantage of interior lines of defense and was able to move its troops rapidly from one battlefront to the other. The disunity of the anti-Communist forces seriously weakened their efforts. Political differences created distrust among the Whites and prevented them from cooperating effectively with each other. Some Whites, such as Admiral Kolchak, insisted on restoring the tsarist regime, but others understood that only a more liberal and democratic program had any chance of success. Since the White forces were forced to operate on the fringes of the Russian Empire, it was difficult enough to achieve military cooperation. Political differences made it virtually impossible.

The Whites’ inability to agree on a common goal contrasted sharply with the Communists’ single-minded sense of purpose. Inspired by their vision of a new socialist order, the Communists had the advantage of possessing the determination that comes from revolutionary fervor and revolutionary convictions.

The Communists also succeeded in translating their revolutionary faith into practical instruments of power. A policy of war communism, for example, was used to ensure regular supplies for the Red Army. War communism included the nationalization of banks and most industries, the forcible requisition of grain from peasants, and the centralization of state administration under Bolshevik control. Another Bolshevik instrument was “revolutionary terror.” Although the old tsarist secret police had been abolished, a new Red secret police—known as the Cheka (CHEK-uh)—replaced it. The Red Terror instituted by the Cheka aimed at nothing less than the destruction of all opponents of the new regime. “Class enemies”—the bourgeoisie—were especially singled out, at least according to a Cheka officer: “The first questions you should put to the accused person are: To what class does he belong, what is his origin, what was his education, and what is his profession? These should determine the fate of the accused.” In practice, however, the Cheka promulgated terror against members of all classes, including the proletariat, if they opposed the new regime. Thousands were executed. The Red Terror added an element of fear to the Bolshevik regime.

Finally, the intervention of foreign armies enabled the Communists to appeal to the powerful force of Russian patriotism. Although the Allied Powers had initially intervened in Russia to encourage the Russians to remain in the war, the end of the war on November 11, 1918, had made that purpose inconsequential. Nevertheless, Allied troops remained, and Allied countries did not hide their anti-Bolshevik feelings. At one point, British, American, French, and (in Siberia) Japanese forces were stationed on Russian soil. These forces rarely engaged in pitched battles, however, nor did they pursue a common strategy, although they did give material assistance to the anti-Bolsheviks. This intervention by the Allies enabled the Communist government to appeal to patriotic Russians to fight the attempts of foreigners to control their country. Allied interference was never substantial enough to make a military difference in the civil war, but it did serve indirectly to help the Bolshevik cause.

How did the area under Bolshevik control make it easier for the Bolsheviks to defeat the White forces?
The Last Year of the War

For Germany, the withdrawal of the Russians from the war in March 1918 offered renewed hope for a favorable outcome. The victory over Russia persuaded Ludendorff and most German leaders to make one final military gamble—a grand offensive in the west to break the military stalemate. The German attack was launched in March and lasted into July. The German forces succeeded in advancing 40 miles to the Marne River, within 35 miles of Paris. But an Allied counterattack, led by the French General Ferdinand Foch (FAYR-dee-nawhn FUSH) and supported by the arrival of 140,000 fresh American troops, defeated the Germans at the Second Battle of the Marne on July 18. Ludendorff’s gamble had failed. Having used up his reserves, Ludendorff knew that defeat was now inevitable. With the arrival of one million more American troops on the Continent, Allied forces began making a steady advance toward Germany.

On September 29, 1918, General Ludendorff informed German leaders that the war was lost. Unwilling to place the burden of defeat on the army, Ludendorff demanded that the government sue for peace at once. When German officials discovered that the Allies were unwilling to make peace with the autocratic imperial government, they instituted reforms to set up a liberal government. But these reforms came too late for the exhausted and angry German people. On November 3, naval units in Kiel mutinied, and within days, councils of workers and soldiers, German versions of the Russian soviets, were forming throughout northern Germany and taking over the supervision of civilian and military administrations. William II capitulated to public pressure and left the country on November 9, while the socialists under Friedrich Ebert (FREED-rikh AY-bert) announced the establishment of a republic. Two days later, on November 11, 1918, an armistice agreed to by the new German government went into effect. The war was over, but the revolutionary forces set in motion by the Bolsheviks to seize the reins of power. In turn, the Russian Revolution had an impact on the course of World War I.

By 1921, the Communists had succeeded in retaining control of Russia (though not without an enormous loss of life and destruction in the country; see Chapter 27). In the course of the civil war, the Bolshevik regime had also transformed Russia into a bureaucratically centralized state dominated by a single party. It was also a state that was largely hostile to the Allied Powers that had sought to assist the Bolsheviks’ enemies in the civil war. To most historians, the Russian Revolution is unthinkable without the total war of World War I, for only the collapse of Russia made it possible for a radical minority like the Bolsheviks to seize the reins of power. In turn, the Russian Revolution had an impact on the course of World War I.

### The Casualties of the War

World War I devastated European civilization. Between 8 and 9 million soldiers...
died on the battlefields; another 22 million were wounded. Many of those who survived later died from war injuries or suffered the loss of arms or legs or other forms of mutilation. The birthrate in many European countries declined noticeably as a result of the death or maiming of so many young men. World War I also created a “lost generation” of war veterans who had become accustomed to violence and who would form the postwar bands of fighters who supported Mussolini and Hitler in their bids for power (see Chapter 27).

Nor did the killing affect only soldiers. Untold numbers of civilians died from war, civil war, or starvation. In 1915, using the excuse of a rebellion by the Armenian minority and their supposed collaboration with the Russians, the Turkish government began systematically to kill Armenian men and expel women and children. Within seven months, 600,000 Armenians had been killed, and 500,000 had been deported. Of the latter, 400,000 died while marching through the deserts and swamps of Syria and Iraq. By September 1915, as many as one million, and possibly more, Armenians were dead, the victims of genocide.

Revolutionary Upheavals in Germany and Austria-Hungary

Like Russia, Germany and Austria-Hungary experienced political revolution as a result of military defeat. In November 1918, when Germany began to disintegrate in a convulsion of mutinies and mass demonstrations (known as the November Revolution), only the Social Democrats were numerous and well organized enough to pick up the pieces. But the German socialists had divided into two groups during the war. A majority of the Social Democrats still favored parliamentary democracy as a gradual approach to social democracy and the elimination of the capitalist system. A minority of German socialists, however, disgusted with the Social Democrats’ support of the war, had formed their own Independent Social Democratic Party in 1916. In 1918, the more radical members of the Independent Socialists favored an immediate social revolution carried out by the councils of soldiers, sailors, and workers. Led by Karl Liebknecht (LEEP-knekt) and Rosa Luxemburg (LOOK-sum-boork), these radical, left-wing socialists formed the German Communist Party in December 1918. In effect, two parallel governments were established in Germany: the parliamentary republic proclaimed by the majority Social Democrats and the revolutionary socialist republic declared by the radicals.

Unlike Russia’s Bolsheviks, Germany’s radicals failed to achieve control of the government. By ending the war on November 11, the moderate socialists had removed a major source of dissatisfaction. When the radical socialists (now known as Communists) attempted to seize power in Berlin in January 1919, Friedrich Ebert and the moderate socialists called on the regular army and groups of anti-revolutionary volunteers known as Free Corps to crush the rebels. The victorious forces brutally murdered Liebknecht and Luxemburg. A similar attempt at Communist revolution in the city of Munich in southern Germany was also crushed by the Free Corps and the regular army. The German republic had been saved, but only because the moderate socialists had relied on the traditional army—in effect, the same conservatives who had dominated the old imperial regime. Moreover, this “second revolution” of January 1919, bloodily crushed by the republican government, created a deep fear of communism among the German middle classes. All too soon, this fear would be cleverly manipulated by a politician named Adolf Hitler.

Austria-Hungary, too, experienced disintegration and revolution. When it attacked Serbia in 1914, the imperial regime had tried to crush the nationalistic forces that it believed were destroying the empire. By 1918, those same nationalistic forces had brought the complete breakup of the Austro-Hungarian Empire. As war weariness took hold of the empire, ethnic minorities increasingly sought to achieve national independence. This desire was further encouraged by Allied war aims that included calls for the independence of the subject peoples. By the time the war ended, the Austro-Hungarian Empire had been replaced by the independent republics of Austria, Hungary, and Czechoslovakia and a new southern Slavic monarchical state that eventually came to be called Yugoslavia. Other regions clamored to join Italy, Romania, and a reconstituted Poland. Rivalries among the nations that succeeded Austria-Hungary would weaken eastern Europe for the next eighty years. Ethnic pride and national statehood proved far more important to these states than class differences. Only in Hungary was there an attempt at social revolution when Béla Kun (BAY-luh KOON) established a Communist state. It was crushed after a brief five-month existence.

The Peace Settlement

**Focus Question:** What were the objectives of the chief participants at the Paris Peace Conference of 1919, and how closely did the final settlement reflect these objectives?

In January 1919, the delegations of the victorious Allied nations gathered in Paris to conclude a final settlement of the Great War. By that time, the reasons for fighting World War I had been transformed from selfish national interests to idealistic principles. At the end of 1917, after they had taken over the Russian government, Lenin and the Bolsheviks had publicly revealed the contents of secret wartime treaties found in the archives of the Russian foreign ministry. The documents made it clear that European nations had gone to war primarily to achieve territorial gains. At the beginning of 1918, however, the American president, Woodrow Wilson, had attempted to shift the discussion of war aims from territorial gains to a higher ground.
Peace Aims

On January 8, 1918, President Wilson submitted to the U.S. Congress an outline known as the “Fourteen Points” that he believed justified the enormous military struggle as being fought for a moral cause. Later, Wilson spelled out additional steps for a truly just and lasting peace. Wilson’s proposals included “open covenants of peace, openly arrived at” instead of secret diplomacy; the reduction of national armaments to a “point consistent with domestic safety”; and the self-determination of peoples so that “all well-defined national aspirations shall be accorded the utmost satisfaction.” Wilson characterized World War I as a people’s war waged against “absolutism and militarism,” two scourges of liberty that could only be eliminated by creating democratic governments and a “general association of nations” that would guarantee the “political independence and territorial integrity to great and small states alike” (see the box on p. 806). As the spokesman for a new world order based on democracy and international cooperation, Wilson was enthusiastically cheered by many Europeans when he arrived in Europe for the peace conference. Wilson’s rhetoric on self-determination was also heard by peoples in the colonial world and was influential in inspiring anticolonial nationalist movements in Africa, Asia, and the Middle East (see Chapter 26).

Wilson soon found, however, that other states at the Paris Peace Conference were guided by considerably more pragmatic motives. The secret treaties and agreements, for example, that had been made before the war could not be totally ignored, even if they did conflict with the principle of self-determination enunciated by Wilson. National interests also complicated the deliberations of the Paris Peace Conference. David Lloyd George, prime minister of Great Britain, had won a decisive electoral victory in December 1918 on a platform of making the Germans pay for this dreadful war.

France’s approach to peace was primarily determined by considerations of national security. Georges Clemenceau, the feisty premier of France, believed that the French people had borne the brunt of German aggression and deserved revenge and security against future German aggression (see the box on p. 806). Clemenceau wanted a demilitarized Germany, vast German reparations to pay for the costs of the war, and a separate Rhineland as a buffer state between France and Germany—demands that Wilson viewed as vindictive and contrary to the principle of national self-determination.

Yet another consideration affected the negotiations at Paris: the fear that Bolshevik revolution would spread from Russia to other European countries. This concern led the Allies to enlarge and strengthen such eastern European states as Poland, Czechoslovakia, and Romania at the expense of both Germany and Bolshevik Russia.

Although twenty-seven nations were represented at the Paris Peace Conference, the most important decisions were made by Wilson, Clemenceau, and Lloyd George. Italy was considered one of the so-called Big Four powers but played a much less important role than the other three countries. Germany, of course, was not invited to attend, and Russia could not because of civil war, although the Allies were also unwilling to negotiate with the Communist regime that was then fighting for power in Russia.

In view of the many conflicting demands at the conference table, it was inevitable that the Big Three would quarrel. Wilson was determined to create a “league of nations” to prevent future wars. Clemenceau and Lloyd George were equally determined to punish Germany. In the end, only compromise made it possible to achieve a peace settlement. On January 25, 1919, the conference adopted the principle of the League of Nations. The details of its structure were left for later sessions, and Wilson willingly agreed to make compromises on territorial arrangements to guarantee the establishment of the League, believing that a functioning League could later rectify bad arrangements. Clemenceau also compromised to obtain some guarantees for French security. He renounced France’s desire for a separate Rhineland and instead accepted a defensive alliance with Great Britain and the United States. Both states pledged to help France if it was attacked by Germany.
When the Allied powers met in Paris in January 1919, it soon became apparent that the victors had different opinions on the kind of peace they expected. The first selection is a series of excerpts from the speeches of Woodrow Wilson in which the American president presented his idealistic goals for a peace based on justice and reconciliation.

The French leader Georges Clemenceau had a vision of peacemaking quite different from that of Woodrow Wilson. The French sought revenge and security. In the selection from his book *Grandeur and Misery of Victory*, Clemenceau revealed his fundamental dislike and distrust of Germany.

Yet a third voice of peacemaking was heard in Paris in 1919, although not at the peace conference. W. E. B. Du Bois, an African American writer and activist, had organized the Pan-African Congress to meet in Paris during the sessions of the Paris Peace Conference. The goal of the Pan-African Congress was to present a series of resolutions that promoted the cause of Africans and people of African descent. As can be seen in the selection presented here, the resolutions did not call for immediate independence for African nations.

---

**Woodrow Wilson, Speeches**

**May 26, 1917**

We are fighting for the liberty, the self-government, and the undicted development of all peoples, and every feature of the settlement that concludes this war must be conceived and executed for that purpose. Wrongs must first be righted and then adequate safeguards must be created to prevent their being committed again. . . .

No people must be forced under sovereignty under which it does not wish to live. No territory must change hands except for the purpose of securing those who inhabit it a fair chance of life and liberty. No indemnities must be insisted on except those that constitute payment for manifest wrongs done. No readjustments of power must be made except such as will tend to secure the future peace of the world and the future welfare and happiness of its peoples.

And then the free peoples of the world must draw together in some common covenant, some genuine and practical cooperation that will in effect combine their force to secure peace and justice in the dealings of nations with one another.

---

**April 6, 1918**

We are ready, whenever the final reckoning is made, to be just to the German people, deal fairly with the German power, as with all others. There can be no difference between peoples in the final judgment, if it is indeed to be a righteous judgment. To propose anything but justice, even-handed and dispassionate justice, to Germany at any time, whatever the outcome of the war, would be to renounce and dishonor our own cause. For we ask nothing that we are not willing to accord.

**January 3, 1919**

Our task at Paris is to organize the friendship of the world, to see to it that all the moral forces that make for right and justice and liberty are united and are given a vital organization to which the peoples of the world will readily and gladly respond. In other words, our task is no less colossal than this, to set up a new international psychology, to have a new atmosphere.

**Georges Clemenceau, *Grandeur and Misery of Victory***

War and peace, with their strong contrasts, alternate against a common background. For the catastrophe of 1914 the Germans are responsible. Only a professional liar would deny this. . . .

What after all is this war, prepared, undertaken, and waged by the German people, who flung aside every scruple of conscience to let it loose, hoping for a peace of enslavement under the yoke of a militarism, destructive of all human dignity? It is simply the continuance, the recrudescence, of those never-ending acts of violence by which the first savage tribes carried out their deprivations with all the resources of barbarism. . . .

I have sometimes penetrated into the sacred cave of the Germanic cult, which is, as every one knows, the *Bierhaus* [beer hall]. A great aisle of massive humanity where there accumulate, amid the fumes of tobacco and beer, the popular rumblings of a nationalism upheld by the sonorous brasses blaring to the heavens the supreme voice of Germany, *Deutschland über alles! Germany above everything!*. Men, women, and children, all petrified in reverence before the divine stoneware pot, brows furrowed with irrepressible power, eyes lost in a dream of infinity, mouths twisted by the intensity of willpower, drink in long draughts the celestial hope of vague expectations. These only remain to be realized presently when the chief marked out by Destiny shall have given the word. There you have the ultimate framework of an old but childish race.

(continued)
(Opposing Viewpoints continued)

**Pan-African Congress**

Resolved

That the Allied and Associated Powers establish a code of law for the international protection of the natives of Africa.

The Negroes of the world demand that hereafter the natives of Africa and the peoples of African descent be governed according to the following principles:

1. The Land: the land and its natural resources shall be held in trust for the natives and at all times they shall have effective ownership of as much land as they can profitably develop.

2. Labor: slavery and corporal punishment shall be abolished and forced labor except in punishment for crime.

3. Judicial: the natives must have the right to have their cases tried by judges and juries of their own choosing, in a code of law for the international protection of the natives.

4. Education: the natives must have the right to education and a university for the natives.

5. The State: the natives of Africa must have the right to participate in the government as fast as their development permits, in conformity with the principle that the government exists for the natives, and not the natives for the government.

Q How did the peacemaking aims of Wilson and Clemenceau differ? How did their different views affect the deliberations of the Paris Peace Conference and the nature of the final peace settlement? How and why did the views of the Pan-African Congress differ from those of Wilson and Clemenceau?

---

**The Treaty of Versailles**

The final peace settlement of Paris consisted of five separate treaties with the defeated nations—Germany, Austria, Hungary, Bulgaria, and the Ottoman Empire. The Treaty of Versailles with Germany, signed on June 28, 1919, was by far the most important. The Germans considered it a harsh peace, conveniently overlooking that the Treaty of Brest-Litovsk, which they had imposed on Bolshevik Russia, was even more severe. The Germans were particularly unhappy with Article 231, the so-called War Guilt Clause, which declared Germany (and Austria) responsible for starting the war and ordered Germany to pay reparations for all the damage to which the Allied governments and their people were subjected as a result of the war “imposed upon them by the aggression of Germany and her allies.” Reparations were a logical consequence of the wartime promises that Allied leaders had made to their people that the Germans would pay for the war effort. The treaty did not establish the amount to be paid but left that to be determined later by a reparations commission (see Chapter 26).

The military and territorial provisions of the treaty also rankled the Germans, although they were by no means as harsh as the Germans claimed. Germany had to reduce its army to 100,000 men, cut back its navy, and eliminate its air force. German territorial losses included the cession of Alsace and Lorraine to France and sections of Prussia to the new Polish state. German land west and as far as 30 miles east of the Rhine was established as a demilitarized zone and stripped of all armaments or fortifications to serve as a barrier to any future German military moves westward against France. Outraged by the “dictated peace,” the new German government vowed to resist rather than accept the treaty, but it had no real alternative. Rejection meant a renewal of the war, and as the army pointed out, that was no longer practicable.

**The Other Peace Treaties**

The separate peace treaties made with the other Central Powers extensively redrew the map of eastern Europe. Many of these changes merely ratified what the war had already accomplished. The empires that had controlled eastern Europe for centuries had been destroyed or weakened, and a number of new states appeared on the map of Europe (see Map 25.5).

Both the German and Russian empires lost considerable territory in eastern Europe, and the Austro-Hungarian Empire disappeared altogether. New nation-states emerged from the lands of these three Empires: Finland, Latvia, Estonia, Lithuania, Poland, Czechoslovakia, Austria, and Hungary. Territorial rearrangements were also made in the Balkans. Romania acquired additional lands from Russia, Hungary, and Bulgaria. Serbia formed the nucleus of the new state of Yugoslavia.

Although the Paris Peace Conference was supposedly guided by the principle of self-determination, the mixtures of peoples in eastern Europe made it impossible to draw boundaries along neat ethnic lines. Compromises had to be made, sometimes to satisfy the national interest of the victors. France, for example, had lost Russia as its major ally on Germany’s eastern border and wanted to strengthen and expand Poland, Czechoslovakia, Yugoslavia, and Romania as much as possible so that those states could serve as barriers against Germany and Communist Russia. As a result of compromises, virtually every eastern European state was left with a minorities problem that could lead to future conflicts. Germans in Poland; Hungarians, Poles, and Germans in Czechoslovakia; and Serbs, Croats, Slovenes, Macedonians, and Albanians in Yugoslavia all became sources of later conflict.

The centuries-old Ottoman Empire was dismembered by the peace settlement after the war. To gain Arab support against the Ottomans during the war, the Allies had promised to recognize the independence of Arab states in
At the urging of U.S. President Woodrow Wilson, many nationalist aspirations of former imperial subjects were realized with the creation of several new countries from the prewar territory of Austria-Hungary, Germany, and Russia. What new countries emerged, and what countries gained territory when Austria-Hungary was dismembered?

View an animated version of this map or related maps on the CourseMate website.

the Middle Eastern lands of the Ottoman Empire. But the imperialist habits of Europeans died hard. After the war, France took control of Lebanon and Syria, and Britain received Iraq and Palestine (see the map on p. 809). Officially, both acquisitions were called mandates. Since Woodrow Wilson had opposed the outright annexation of colonial territories by the Allies, the peace settlement had created a system of mandates whereby a nation officially administered a territory on behalf of the League of Nations. The system of mandates could not hide the fact that the principle of national self-determination at the Paris Peace Conference was largely for Europeans. The peace settlement negotiated at Paris soon came under attack, not only by the defeated Central Powers but also by others who felt that the peacemakers had been shortsighted. Some people agreed, however, that the
settlement was the best that could be achieved under the circumstances. They believed that self-determination had served reasonably well as a central organizing principle, and the establishment of the League of Nations gave some hope that future conflicts could be resolved peacefully. Yet within twenty years, Europe would again be engaged in deadly conflict. As some historians have suggested, perhaps a lack of enforcement, rather than the structure of the settlement, may account for the failure of the peace of 1919.

Successful enforcement of the peace necessitated the active involvement of its principal architects, especially in helping the new German state develop a peaceful and democratic republic. The failure of the U.S. Senate to ratify the Treaty of Versailles, however, meant that the United States never joined the League of Nations. The Senate also rejected Wilson’s defensive alliance with Great Britain and France. Already by the end of 1919, the United States was pursuing policies intended to limit its direct involvement in future European wars.

This retreat had dire consequences. American withdrawal from the defensive alliance with Britain and France led Britain to withdraw as well. By removing itself from European affairs, the United States forced France to stand alone facing its old enemy, leading the embittered nation to take strong actions against Germany that only intensified German resentment. By the end of 1919, it appeared that the peace established mere months earlier was already beginning to unravel.

**CHAPTER SUMMARY**

The assassination of Archduke Francis Ferdinand of Austria-Hungary in the Bosnian capital of Sarajevo in the summer of 1914 led within six weeks to a major war among the major powers of Europe. The Germans drove the Russians back in the east, but a stalemate developed in the west, where trenches extending from the Swiss border to the English Channel were defended by barbed wire and machine guns. The Ottoman Empire joined Germany, and Italy became one of the Allies. After German submarine attacks, the United States entered the war in 1917, but even from the beginning of the war, battles also took place in the African colonies of the Great Powers as well as in the East, making this a truly global war.

Unprepared for war, Russia soon faltered and collapsed, leading to a revolution against the tsar. But the new provisional government in Russia also soon failed, enabling the revolutionary Bolsheviks of V. I. Lenin to seize power. Lenin established a dictatorship and made a costly peace with Germany. After Russia’s withdrawal from the war, Germany launched a massive attack in the west but had been severely weakened by the war. In the fall of 1918, after American troops entered the conflict, the German government collapsed, leading to the armistice on November 11, 1918.

World War I was the defining event of the twentieth century. It shattered the liberal and rational assumptions of late-nineteenth and early-twentieth-century European society. The incredible destruction and the deaths of almost 10 million people undermined the whole idea of progress. New propaganda techniques had manipulated entire populations into sustaining their involvement in a meaningless slaughter.

World War I was a total war that required extensive mobilization of resources and populations. As a result, government centralization increased, as did the power of the state over the lives of its citizens. Civil liberties, such as freedom of the press, speech, assembly, and movement, were circumscribed in the name of national security. Governments’ need to plan the production and distribution of goods and to ration consumer goods led to restrictions on economic freedom. Although the late nineteenth and early twentieth centuries had witnessed the extension of government authority into such areas as mass education, social welfare legislation, and mass
conscription, World War I made the practice of strong central authority a way of life.

Finally, World War I ended the age of European hegemony over world affairs. In 1917, the Russian Revolution had laid the foundation for the creation of a new Eurasian power, the Soviet Union, and the United States had entered the war. The waning of the European age was not evident to all, however, for it was clouded by American isolationism and the withdrawal of the Soviets from world affairs while they nurtured the growth of their own socialist system. These developments, though temporary, created a political vacuum in Europe that all too soon was filled by the revival of German power.

CHAPTER TIMELINE

CHAPTER REVIEW

Upon Reflection

Q Which nation, if any, was most responsible for causing World War I? Why?

Q Why can 1917 be viewed as the year that witnessed the decisive turning point of the war?

Q How did Lenin and the Bolsheviks manage to seize and hold power despite their small numbers?

Key Terms

conscript (p. 777)
militarism (p. 777)
mobilization (p. 778)
trench warfare (p. 782)
total war (p. 791)
nationalization (p. 791)
soviets (p. 798)
Bolsheviks (p. 798)
war communism (p. 802)
genocide (p. 804)
self-determination (p. 805)
War Guilt Clause (p. 807)
mandates (p. 808)

Suggestions for Further Reading

Visit the CourseMate website at www.cengagebrain.com for additional study tools and review materials for this chapter.
1. Which of the following alliances contributed the MOST to causing World War I?
(A) France–United States
(B) Germany–Italy
(C) Serbia–Russia
(D) Austria-Hungary–Ottoman Empire
(E) Great Britain–Poland

2. Nationalism contributed to World War I by
(A) suppressing negative attitudes toward minorities within newly created nation-states.
(B) encouraging the rearmament of many nations to protect against their unruly masses.
(C) generating the desire for self-rule and the willingness to take extreme measures to gain it.
(D) creating a sense of identity within the new states of Western Europe as they sought greater control over colonized countries in Africa and Asia.
(E) encouraging alliances between minorities across regions so they could gain political power throughout northern Europe.

3. Which of the following was NOT a new technology used in World War I?
(A) airplanes
(B) submarines
(C) rifles
(D) tanks
(E) poison gas

4. Lenin’s rallying cry of “Peace, Land and Bread” led to which of the following events?
(A) Russia allied itself with the western powers in hopes that they would supply Russia with much-needed food and supplies.
(B) Lenin successfully convinced the Russian people that he would guide them to a more prosperous time.
(C) The Mensheviks retaliated against the Romanovs and won greater support from those hesitant to support the revolution.
(D) Russia withdrew from World War I, dealing a huge blow to Germany and Austria-Hungary.
(E) The Provisional government toppled the Bolshevik regime, as Lenin’s slogan suggested that Russia might suffer psychological defeat by leaving the war.

5. Which of the following best describes the global scale of World War I?
(A) People from India to Africa to China found themselves embroiled in the conflict.
(B) Much of the fighting during the war took place in Japan and Africa instead of Europe.
(C) People within colonized nations chose to fight on the side opposing their mother country.
(D) Countless smaller wars broke out simultaneously throughout the world.
(E) The United States acted as the official peacekeeper between Europe and the East.

6. All of the following contributed to World War I’s high death toll EXCEPT
(A) trench warfare.
(B) following antiquated military strategy.
(C) using modern weaponry.
(D) a lack of sophisticated medical knowledge and resources.
(E) decreasing global food production.

7. In the enlistment poster above, the British government was most likely appealing to
(A) mothers and wives to encourage their sons and husbands to take part in the war.
(B) unemployed and poor men who were seeking war employment.
(C) educated professionals who were choosing not to enlist.
(D) colonial subjects in the British Empire that were not taking part in the war.
(E) Americans to help with the war and join the effort against the Central Powers.
8. The Russian Civil War resulted in
   (A) a cultural revival within the new Soviet state.
   (B) the establishment of a dictatorship led by the Mensheviks and supported by the United States and western Europe.
   (C) the formation of a republic dedicated to peace that held widespread popular support.
   (D) a Russian state under the direct leadership of a single-party regime.
   (E) the establishment of a new Duma and universal suffrage.

9. Which of the following was a legacy of World War I?
   (A) It tilted the balance of power from western Europe to Asia under China's leadership.
   (B) It sparked a new movement of nationalism that led to European decolonization.
   (C) Its embodiment of total war left entire nations devoid of a generation of men.
   (D) It instilled a collective fear of modernized warfare and a desire to reduce arms worldwide.
   (E) It created an effective peacekeeping body charged with establishing and maintaining world peace supported by a global military.

10. Which of the following was the spark that led to World War I?
    (A) the Serbian nationalist Gavrilo Princip's assassination of Archduke Francis Ferdinand
    (B) the United States' pursuit of unrestricted submarine warfare
    (C) the German invasions of Austria and Poland
    (D) the German invasion of Belgium in violation of Belgium's neutrality proclamation
    (E) the alliance of Austria-Hungary against Germany in response to the death of the Austrian leader

11. The Treaty of Versailles, signed in 1919,
    (A) created an amicable agreement among all the European states involved in World War I and established a peacekeeping body to eliminate further global tensions.
    (B) required Germany to accept the "war guilt" clause taking full responsibility for the war, and created new nations out of the broken Austro-Hungarian and Ottoman Empires.
    (C) successfully broke up the empires of central and eastern Europe and required western Europe to police the actions of the eastern countries.
    (D) signaled the emergence of the United States and Great Britain as world superpowers dedicated to maintaining global peace.
    (E) failed to give independence to many of the nations that fought for their autonomy during World War I.

12. Women were involved in World War I in all of the following ways EXCEPT
    (A) they worked in the factories in their home countries.
    (B) they served as nurses to help those injured during the conflict.
    (C) they were combatants in some countries, such as Russia.
    (D) they worked within government offices to support the war effort.
    (E) they led government agencies and held military commands.

13. Which of the following best describes the United States' contribution to World War I?
    (A) It remained neutral throughout the conflict, agreeing to help broker peace between the Allies and the Central Powers.
    (B) It provided weapons and supplies to both sides, becoming wealthier as a result.
    (C) It entered the war at about the same time that Russia left the war, continuing a unified assault against the Central Powers.
    (D) It sent troops at the beginning of the war and provided much-needed military leadership throughout the entire conflict.
    (E) It joined forces with Mexico in an attempt to retaliate against the Zimmermann Telegram issued by Germany.

14. "Even if my heart breaks in death, You will never be French.
    As you are rich in water Germany is rich in hero's blood.
    Dear Fatherland . . . ."

This song excerpt represents the concept of
    (A) militarism.
    (B) individualism.
    (C) nationalism.
    (D) volunteerism.
    (E) Marxism.

15. All of the following leaders played a part in World War I EXCEPT
    (A) Emperor William II of Germany.
    (B) President Woodrow Wilson of the United States.
    (C) Tsar Nicholas II of Russia.
    (D) Prime Minister Lloyd George of Great Britain.
    (E) Emperor Joseph II of Austria.
