THOMPSON DOUBLE 'V' ROD
(Quadrant for measurement of pulls)

N.B.: Use flat, pliable plastic to make rods.

N.B.: Always allow 10 seconds for the mid bar of rod to settle into position to register a dosing pull.

- Keep hands level - use ring cord if necessary.
- To check if the rod has reached its final position, read gently - shake both locked arms up and down and mid bar should hold its angle at a constant reading if in its normal position.
- When standing still, rod locks its position.

Ring Cord pulled each (maintains sideways stability)
