

"Even More Flexible!"

mix and match

Cheetahs can run fast; up to 117 kph.

When the editor described the features of a cheetah which help it run so fast, the list was jumbled.

Can you fix these mistakes by matching the part of the cheetah's body with its correct function?

Cheetah Features	FUNCTION
A. Small head	1. so it is 'light on its feet'
B. Long legs	2. to take in large amounts of oxygen
C. Lean body	3. which reduces wind resistance
D. Expanding nostrils	4. to distribute the oxygen through the body during a chase
E. Large, powerful heart	5. for quick acceleration and tight turns
F. Non- Retractable claws	6. for balancing when cornering
G. Long tail	7. to take big strides
