## **HEARING SCREENING**

The Ohio State University Speech-Language-Hearing Clinic will be at Focus North High School on Monday, December 4, 2017 to provide hearing screenings. All screenings will be performed under the supervision of a licensed audiologist. Hearing screening consists of both pure-tone screening and tympanometry. Pure-tone screening requires your child to listen to "beeps" presented at different frequencies under headphones. Tympanometry assists in determining how the eardrum is moving. The pure-tone and tympanometry screening determine if hearing is within the normal range and if there is normal middle ear function.
