

Opti-Therm Process Heater

The technology you need when it's time to update your system

OUR VIEW

How do you know if it's time to replace your process heating system – or simply repair it? If your existing system is outdated or unreliable – or if you'd like to increase profitability from greater efficiency – replacement is the answer. And there's no better replacement than Wech Tech's Opti-Therm Process Heater:

- The design and construction stems from the expertise of specialists in thermal fluid applications
- It's low maintenance and ultra-high in efficiency
- It's available in two orientations and flow rates – and in complete packages that include heater pumps and controls

Key Features/Benefits

- Three-pass dual helical coil advantage: Up to 85% thermally efficient without using economizer or air preheater
- Designed for use with most thermal fluids on the market
- Up to 75 mm Btu/hr (Larger custom sizes upon request)

- Up to 750°F fluid temperatures
- Horizontal or vertical orientation options
- Optimum, flexible, PLC-based controls
- Available in low and ultra-low NOx versions

Add even more efficiency with Premium or Premium Plus burner packages

Also Available: Auxiliary System Engineered Components

- Pump skids - complete skid mounted with multiple pumps, valves, strainers and piping
- Air pre-heater or economizer for increased efficiency
- Expansion Tanks - Complete expansion systems
- Customized higher level control systems and devices available
- Storage Tanks - Includes fill and drain pump with storage for system draining or fluid holding
