

## RiF-DR v2 Profile List and Manual

### Cabinet Profiles

#### How to use the Cabinet Profiles:

You can freely mix and match my amplifier and cabinet profiles, creating literally thousands of combinations.

To use these profiles, select a DI or Merged amplifier profile, long-press CABINET and select FROM RIGS.

Then use the BROWSE knob to select one of the "RiF-.Cab\*" profiles.

You can also lock your preferred cab profile in the CABINET section using the LOCK button and then browse through different amplifier profiles.

#### How to interpret the Mic Position coding:

[position][distance in inches]

where position ranges from "a" (center of speaker) to "b" (ca. 1 inch outside of the center) to "d" (ca. 3 inches outside of center),

"x" stands for angled mic positions,

and distance ranges from "0" (right at the grille) to "2" (ca. 2 inches from the grille)

Name	Cabinet Name	Speaker Model	Mic Model	Mic Position
<b>Kitty Hawk 4x12, G12-65 (from the early 1980's) Speaker</b>

## Amplifier Profiles

### How to use the Amplifier Profiles:

All the amplifier profiles are Merged Profiles, which means they contain an amplifier DI profile and a Cabinet Profile. You can freely mix and match my amplifier and cabinet profiles, creating literally thousands of combinations.

### How to interpret the Profile Naming:

RiF-DR [channel/mode] [voicing] [gain or pedal] [speaker-mic position] [mic of not 57] where:

- voicing can be Fl(at), Br(right), Mi(ddy), Sc(ooped), Da(rk)

- the pedal codings (OD, GR, SD, DS, MT, PI, TR) are described on my blog at [www.rifsplace.com](http://www.rifsplace.com)

- if gain starts with "-" it reads the actual gain setting on the amp, no pedal used

See the Amp Comment tag to see the amp settings used for the profile
