

Grains and Greens

Oats	30%
Triticale	25%
Forage Peas	25%
Radish	5%
Winfred Brassica	5%
Turnips	5%
Kale	5%

All season blend of annual grains and brassicas. This fast growing mix tolerates a variety of soil conditions and can be planted either spring or fall but it ideally is best planted as a fall mix. It handles a variety of soil conditions and will handle a slightly lower ph as well. This mix will fixate nitrogen, scavenge nutrients, loosen the soil as well as add organic matter. You will get abundant fall forages that will stay green late into the season. The turnips will give you winter bulbs for added energy. The winfred brassica will stay green down to 10 degrees, which also gives one a late season protein source.

Planting Date: April-June 30, Aug1-Sept 15

Planting Depth: 1/4- 1/2"

Seeding Rate: 22-25 lbs per acre

Maturity: 60 days
