

Frosty Delight

Winfred Brassica	30%
Daikon Radish	25%
Forage Turnip	20%
Kale	15%
Rutabaga	10%

Annual multi graze brassica blend that stays green late into the fall and temperatures down to 10 degrees. This high protein, high mineral product is an ultimate late season forage mix. This mix can handle most soil types and tolerates heat and drier conditions better than many brassica blends. The New Zealand forage turnip and winfred brassica give one a great disease package and excellent late season forage growth. The radish in this mix, loosens your soils, as well as scavenges nutrients to be re-released the following spring. It also is an overlooked forage source for late fall. This might be the only true multigraze brassica blend on the market.

Planting Date: May 15- June 30, Aug-Sept 15

Planting Depth: 1/8- 1/4"

Seeding Rate: 8-10 lbs. per acre

Maturity: 60 days
