

ASKET Ltd – Anti Piracy Bridge Cards

The Anti Piracy Bridge Cards have evolved over a period of 6 years, and are designed to provide a Vessel Master and Bridge Team with a quick reference guide for use in a piracy situation, to compliment the Ships Security Plan, BMP4 and other relevant guidance.

Originally designed by the author as a leave behind guide for the Master after conducting vessel security audits and training, and was subsequently used to assist the Master by providing him a reference guide for when unarmed and later armed teams embarked his vessel.

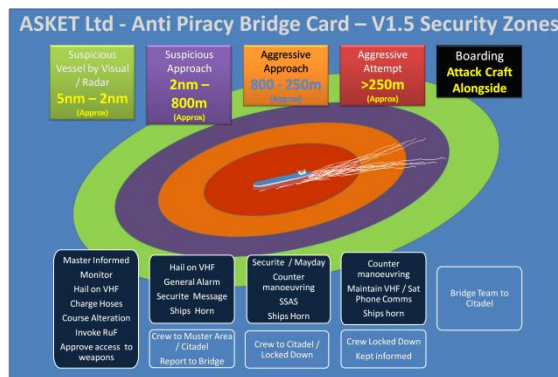

The cards are now available to download online or via the free ASKET Maritime Security App available on both the Apple Store and Play Store for Android.

A pirate attack is quick and the pirates are unpredictable even a well trained bridge team may make mistakes in the heat of the moment as for other ships drills and maritime incidents a check list is an important tool.

Several incidents in the HRA area have occurred where the ships crew and embarked security team although having trained together have not coordinated correctly during an actual incident which has led to mistakes being made and lives being put at risk.

In one case during an attack due to the size of the vessel the team leader was forced to move out side to command his team and so left the Master on the bridge with no safe means of communication, the crew were mustered into a holding area which was a cross passage above the engine room on A Deck. During the attack the pirates opened fire at the vessel in the vicinity of A Deck and the crew were unnecessarily put at risk. This was no individuals fault but a lack of communications and procedure.

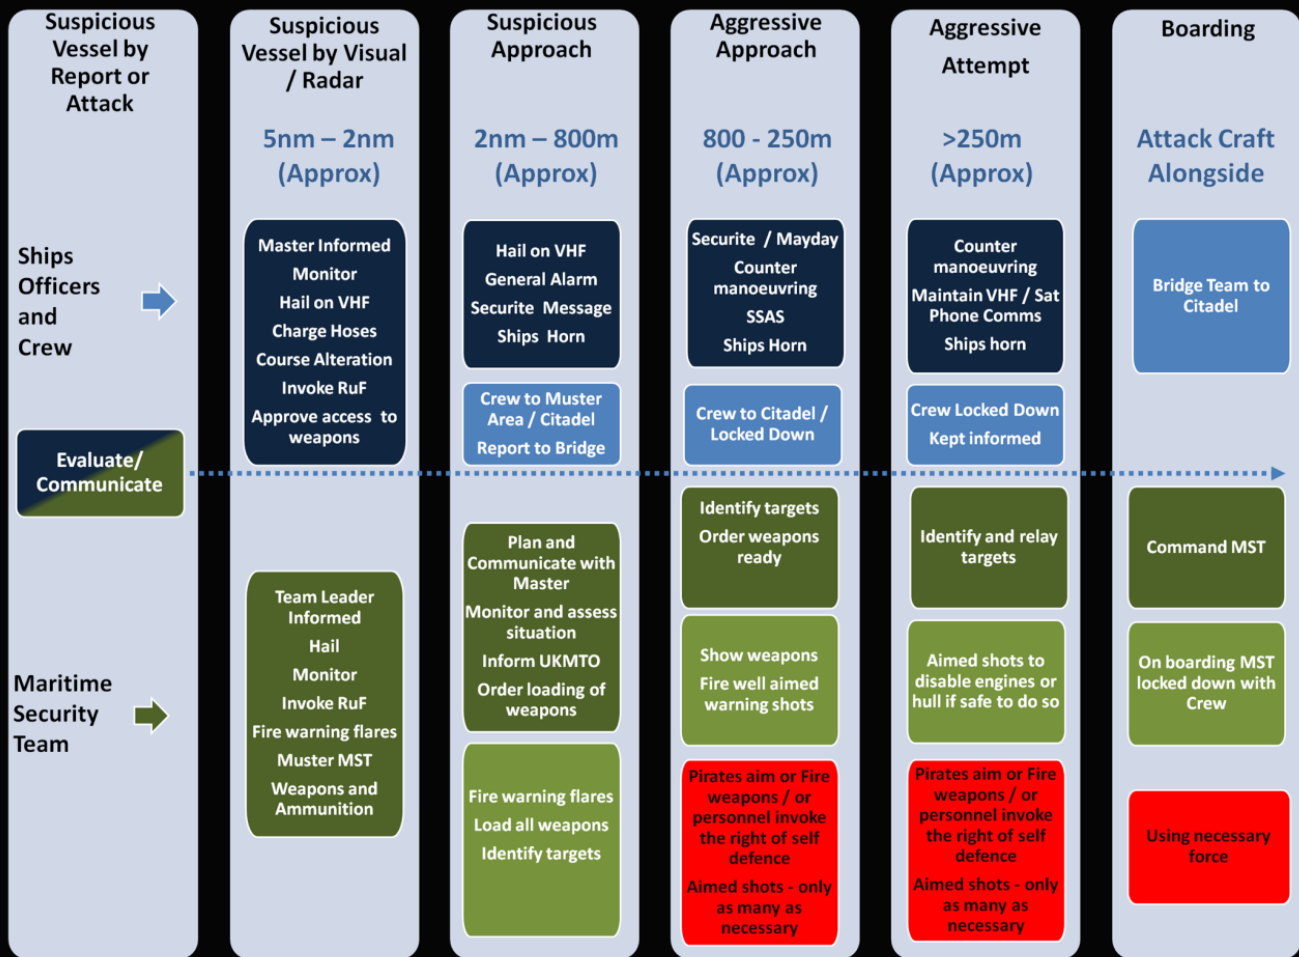

The Anti Piracy Bridge Card is designed to help avoid these types of mistake and protect seafarers, for this reason it is offered by ASKET Ltd as a free resource we only ask that you credit ASKET in any reference to the card, and if you have any suggestions or comments then we would be delighted to hear from you.

The card is a reference guide and is limited by size and as such may be used in conjunction with the SSP, BMP4 and other relevant guidance.
