your responsibility ...*

**SafetySCRAPE**

# SafetySCRAPE

# QuickGUIDE

We understand the problems you have ... slippery, wet entrance ways or ramps ... greasy floors in a kitchen or production area ... slip hazards in locker rooms, lunch bars, retail and restaurants ... we've all experienced that sudden panic of insecurity ... that you're going to slip.

Over the years we've observed that people will do anything to try and reduce slip hazards ... temporary solutions like walking on bits of old carpet, sacks or flattened cardboard boxes. Even so called "permanent solutions" like anti-slip paint, or etching of floors wears off in time. At the best these are temporary solutions ... at the worst they are unsafe and hazardous.

*You have a responsibility by law to take all practicable steps not to cause harm at your workplace.*

So it's good to know that you can fit out your entire workplace with anti-slip mats that are both safe and specifically designed to improve traction on slippery floors for less than the cost of one single accident or claim on you for compensation.

### Unsafe substitutes will cost you ...

Our many customers have learned that the right mat in the right place will improve traction and enhance safety. We can help you find the right mat for your workplace.

### It's important then to choose the right mat ...

SafetySCRAPE is your choice where traction is essential ... in kitchens, bars and any wet areas like ramps, entrance ways, food processing areas. The heavy duty and durable SafetySCRAPE is made from 100% nitrile rubber ... which is oil, grease and chemical resistant ... with moulded cleats top and bottom. These cleats are anti-slip ... improving safety ... and help to resist mat creep on inclines and smooth surfaces. These cleats also act as scrapers to remove mud and dirt from footwear which will help keep your floors clean and reduce maintenance costs. A periodic wash, as necessary, with mild detergent will help maintain the safety features of SafetySCRAPE.
