TECHNICAL INFORMATION

PRESSURE SPRING CONNECTION SYSTEM (FRK)

CONTA-CLIP was the first company in the world to release their pressure spring connection terminal range. The FRK system offers the easiest installation with maximum contact security! This connection element unites the advantages of the spring clamp terminal with the possibility to connect wires without tools!

Solid conductors or stranded conductors with ferrules can be inserted directly into the terminal. Connection with the contact rail is established automatically when the wire is inserted. Arguments for the pressure spring terminals are: direct connection without the need of tools, easy-to-use, compact construction and saves up to 80% wiring time.

TECHNICAL INFORMATION

CONTA-CLIP MARKING SYSTEM

Marking cables, connectors and devices to provide unmistakable, clearly arranged and permanently legible identification protects against mix-ups, increases safety and reduces work levels, which in turn reduces manufacturing and maintenance costs including those caused by production down-times.

CONTA-CLIP offer a wide variety of options for marking terminal blocks, cables, wires and devices.

CONTA-CLIP uses the EMS-2 Plotter manufactured in Germany and still the most cost effective way to mark products reliably.

TECHNICAL INFORMATION

SLIMLINE RELAYS

Slimline relays have a compact design (6.2 & 14mm) which means these relay modules can be integrated in areas where only a narrow space is available. Giving safe galvanic separation of electrical circuits, these relays are perfect for automation equipment.

Relay labeling is available for both single and double pole models. The MCBSTR6-120P marker is suitable for single pole relays and the MCGS6x12RP marker is suitable for the double pole relays.

GSM-PRO CONTROLLER

Conta-Clip's GSM PRO module provides a solution for remotely monitoring and controlling processes by means of SMS signals, emails & GPRS.

Status messages are able to be sent over the GSM network if a process has reached a specified level. The digital and analog input values can also be transmitted via SMS text message. If the values indicate a critical status, the GSM-PRO device gives the service technician the option to control the analogue and digital outputs by SMS. This enables him to take action immediately without being constantly on-site. The module can be used stand alone, but can also be used as a remote module in your control system. The accompanying software can be used to easily set the parameters for the inputs and outputs.

The GSM-PRO Controller can be used whenever the status of process parameters must be monitored. Several application possibilities include: Wind Power Sites, Pump and Irrigation,

GSM-Pro	GSM Controller with 8 Universal Inputs and 4 Digital Outputs	\$737.45
GSM-Antenna	Standard internal antenna	\$28.95
GSM-USB Cable	USB programming cable	\$19.22
GSM-SMA 2.5m	GSM External Antenna	\$261.61

TECHNICAL INFORMATION

CABLE SHIELD CONNECTION

A high degree of interference immunity is required in the field of industrial process engineering. Cable shielding is an important factor in reducing interference - the point where the cable shielding connects being critical.

The connection should be low-ohm, and should also feature minimal inductive resistance. This must be established in a practical, simple and quick manner which Conta-Clip's SAB/SSAB cable shield connection system accomplishes.
