

Labelmakers Extend OFS to Roll Fed Plant

MELBOURNE, VICTORIA, 28 January 2013 - Operations Feedback (OFS) a leading provider of real-time productivity improvement software products, announced today that Labelmakers will be extending their OFS rollout at their Somerton facility in Victoria.

OFS software will be configured on another 5 high speed, wide web presses. Labelmakers have used OFS for several years on 6 presses in their label-printing plant.

“The time was right for us to continue our rollout of OFS. We continue you to find trends in our business that were not as visible without that data that streams from OFS” said Mr Andrew Bamford. “By integrating this with Prism, our MRP software, we also get the added benefit of a fully live schedule across our entire business, where everybody from the planners to customer service to the factory know where we are up to. OFS help us achieve this by monitoring our machines and giving us real-time Analytics.”

“Labelmakers have been a valued long-term client of OFS for some time now, and we are committed to ensuring that these new extensions to the plant are as successful as our previous installations.” Said Mr James Magee, National Sales Manager for OFS.

“During this process, we will also be enabling our new Analytics product suite, which is all part of our flexible Software as a Service model”.
